# Not just about extent but also about impact of different land uses on ecosystem condition

What does this mean for people's dependence on ecosystems?

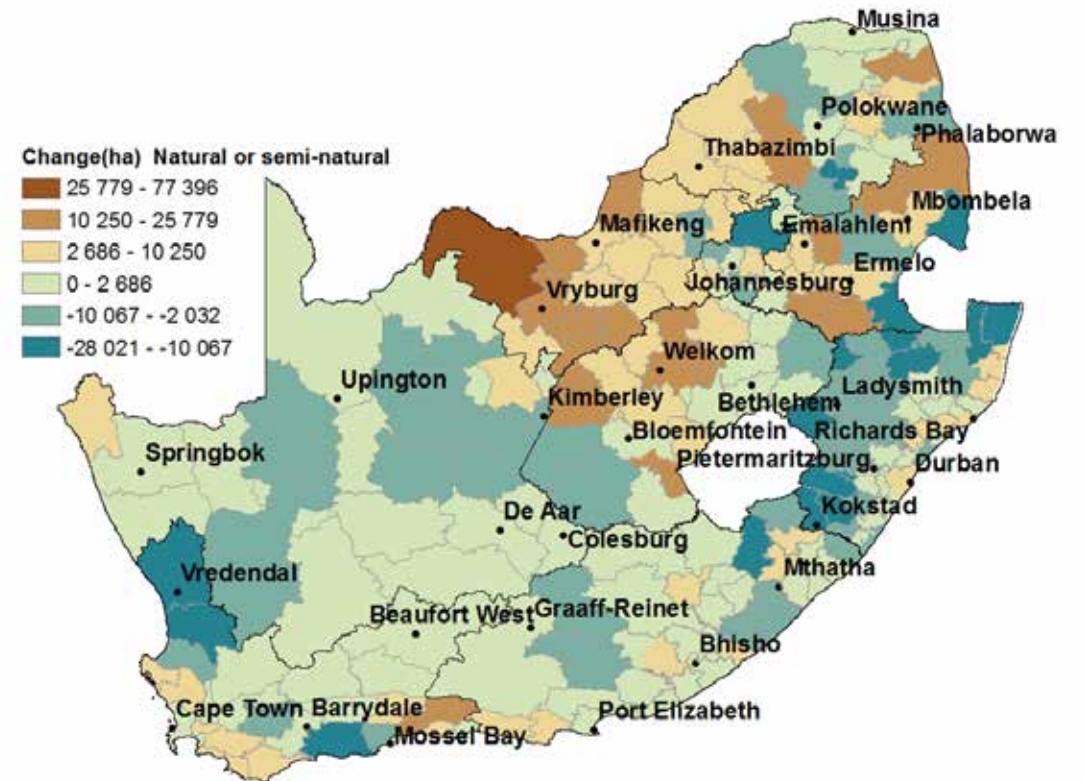

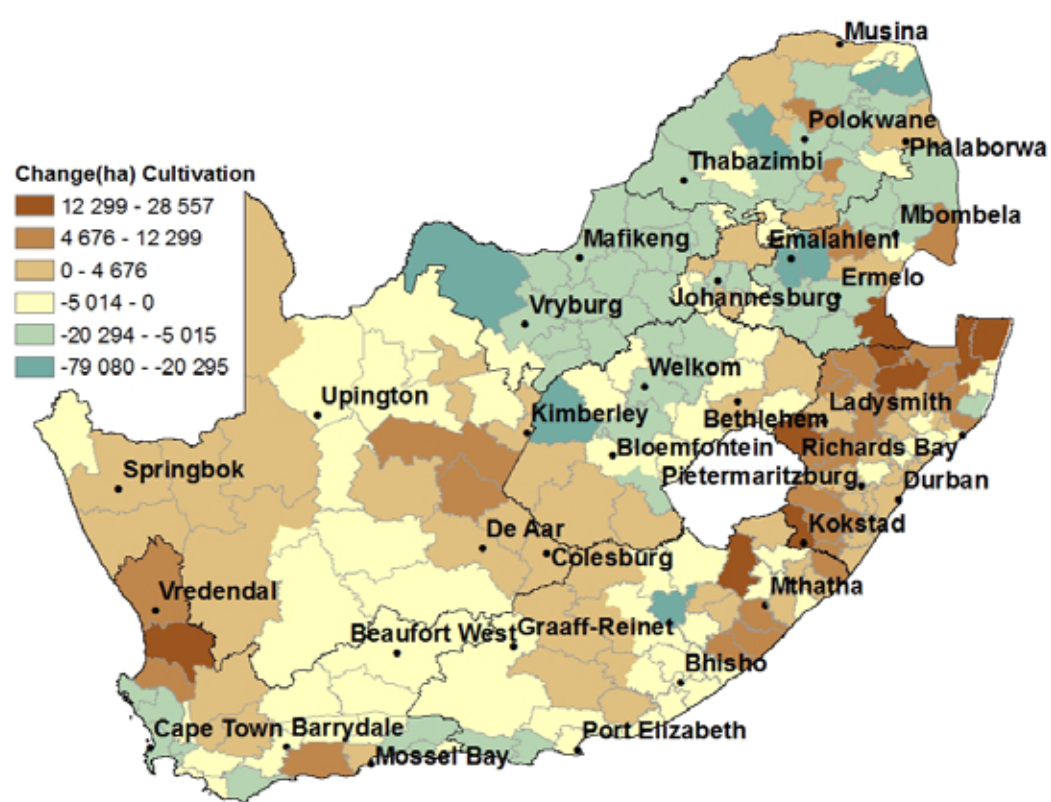

- Rural communities often rely on rivers for drinking water
- They are highly vulnerable to health hazards associated with agricultural and mining effluent

# The NCA in context

- Integrator of data
  - Uses existing data sources and adds value
  - Allows interrogation at multiple scales
  - Allows for comparison of different types of data
- Supports questions about the relationship between nature, people and the economy
- Supports evidence based decision making

# What questions do YOU have?
