Strategic Water Source Areas

Closing statements

- NCA allows for
 - interrogating across sectors
 - Monitoring across land, water and marine ecosystems
- Because the data is all spatial, we can integrate the diff types of data
- It is clear how good time series data of population, economy and environment is important to monitoring
- NCA provides us with huge potential to answer questions and interrogate assumptions about how economic links with environment and society.
- In this way, NCA supports South Africa's ability to make evidence-based decisions.

THANK YOU
