preface

The *Bulletin of Statistics* is one of the country's oldest journals and has been published since 1922. Originally published monthly, it has appeared quarterly (March, June, September and December) since 1967.

The *Bulletin of Statistics* is a reference source which provides statistics in the form of time series of short-term statistics on a month by month, quarter by quarter and year by year basis.

Most of the statistics used in the *Bulletin of Statistics* are based on Statistics South Africa's (Stats SA) own databases. Information sourced from outside Stats SA is duly recognised at the end of each table. All tables, except those indicated, relate to South Africa.

The attention of readers is drawn to the fact that tables in a number of sections are no longer included in the *Bulletin of Statistics*.

The reason for discontinuing these tables is that Stats SA is not the original producer of the data used to compile these tables. As these tables are not derived from current research programmes undertaken by Stats SA, updating of them puts an unfair burden on subject components in the sense that they have to produce tables on subjects not directly related to their current research work. Consequently subject components not responsible for production of particular tables find it difficult to service user queries on such tables.

Statistician-General: Statistics South Africa

abbreviations and symbols used

Abbreviations used

incl.	- including
F	- Female
FS	- Free State
M	- Male
T	- Total
W	- Weights
SA	- South Africa(n)
Stats SA	- Statistics South Africa

Units of measurements

Ton	- Metric ton of 1 000 kilograms (except where otherwise indicated).
Year and month	- Calendar years and calendar months (except where otherwise indicated).

The code, where it appears under the column number, refers to the variable in Stats SA's data bank. This data bank contains data on time series and is available at a fee on diskettes and other media.

Symbols used

..	= Data not available
—	= Nil or not applicable
0 or 0,0	= Figure too small to publish
()	= Figures excluded from totals
_____	= A line drawn across a column of figures, indicates an interruption in the comparability of the series
*	= Revised since previous issue(s)

1. DEMOGRAPHY

1.1 Population mid-year estimates 1/

1.1.1 All population groups

It should be noted that the mid-year estimates will differ from the census data because the data refer to different dates. The mid-year estimates are estimates as at 30 June of the year concerned, while the census data reflect the situation as at census day of each census.

The mid-year estimates were obtained through the combination of cohort-component method and the use of the exponential growth rate method. Further elaboration can be found in Statistical release P0302 (Mid-year estimates).

1/ These estimates have been arrived at using the 1996 census figures as the base population, and making certain assumptions in the estimation of fertility and mortality.

1. DEMOGRAPHY
 1.2 Vital statistics
 1.2.1 1986 to 1990

In comparison with previous years the number of whites and coloureds born during January 1987 and February 1987 is relatively low (as well as the recorded births for Indians, coloureds and whites for 1988 (columns 22-25)). The number of recorded (registered) births during this period has been thoroughly investigated in collaboration with the Department of Home Affairs. No explanation could, however, be found for the relatively low number of recorded births during this period.

As a result of the unaccountably low number of recorded births during January and February, the rates as well as the natural increase for 1987, were calculated on an adjusted number of births and are indicated with an 'a'. The number of recorded births during January 1987 and February 1987 was adjusted on the basis of the number of recorded births during January and February each year from 1975 to 1985 in relation to the total number of recorded births per year.

The registration of vital events among Africans was introduced on a compulsory basis several years ago. However, notwithstanding serious efforts on the part of the registering authorities, the registration of vital events of Africans is still relatively low. Statistics South Africa (Stats SA) did collect and process statistics on recorded births among Africans for 1979, 1980 and 1990, but the figures were so low that they were not published. Statistics on deaths among Africans were, however, published and these have been included in the table below. However, because of the serious level of underreporting of deaths among Africans, it would be misleading to compute death rates based on the reported events. As such the rates have been omitted.

The data on marriages and divorces refer to those reported under civil law. In the past the marriages among the majority of Africans fell under the category of customary or religious marriages. As such, the number of marriages and divorces among Africans reported under civil law were negligible and therefore not published before.

Recorded births as from 1986-1990 were tabulated on a de jure basis, that is, according to place of residence of the mother.

1/ 'Recorded births' (columns 22-25) indicates the number of births recorded (registered) in a specific year irrespective of when the birth actually took place. 'Births' indicates the actual number of births that took place in a specific year and can be obtained from Statistical report No. 03-05-01 (1990).

2/ It should be noted that data on recorded deaths (columns 22-25) for 1989 and 1990 are relatively low in comparison

1. DEMOGRAPHY
 1.2 Vital statistics
 1.2.2 1991 to 2002

As from 1991 statistical information regarding recorded births, recorded deaths and marriages is no longer available by population group. This table, therefore, contains information for the four population groups combined.

Recorded births, recorded deaths and marriage information indicate the number of births, deaths and marriages respectively that were recorded in a specific year, irrespective of when the event actually occurred.

Recorded births as from 1991 were tabulated on a de facto basis, that is, according to place of birth of the child.

Registrations	Year	Total	Male	Female	Unspecified
		29	30	31	32
1.2.2.1 Births 1/	1992	501 461

1/ As a result of the loss of data at Bureau Nucleus, the number of registered births for 1996 were adjusted, while those for 1997 were estimated. Further details can be found in Statistical release P0305 (Recorded births, 1990-1997).

2/ As of the end of March 1998 the data held at Bureau Beta have been transferred to Bureau Nucleus. As a result vital statistics data, which were more than a year old, were destroyed, including late registration data for marriages for 1997.

1. DEMOGRAPHY
 1.2 Vital statistics
 1.2.3 Vital statistics - 1991-2000 - Divorces

Considering that the number of divorces from 1990-1991 indicated a relative decrease, the number of finalised divorces received from the registrars of the various divisions of the Supreme Court during 1992, was compared with the court rolls of finalised divorces of the courts concerned. It was found that Stats SA did not receive all the divorce information of the concerned courts. An adjustment was, therefore, made to the 1992 divorce information received, to provide a more accurate divorce figure.

In comparison with the data of the 1992 divorces, the number of divorces for 1993 is again relatively low. Following an enquiry, the various divisions of the Supreme Court confirmed that all relevant information on divorces for 1993 was supplied to Stats SA.

If information regarding all marriages and divorces is not supplied, incompleteness can occur. The occurrence of survey errors is, therefore, not inevitable and the extent to which it could affect marriages and divorces cannot be estimated.

Series	Year	Number					
		African	Coloured	Indian/ Asian	White	Mixed	Unspecified
		33	34	35	36	37	38
1.2.3.1. Divorces	1993	..	5 920	1 676	19 020
	1994	4 754	5 190	1 684	18 250
	1995	8 174	5 029	1 601	16 788

1.3.1 Arrivals: Foreign travellers by purpose of visit

With effect from 4 January 1993 a new computerised system for the recording of travellers to and from South Africa was implemented by the Department of Home Affairs. With the new system South African residents are not required to complete departure or arrival forms when they leave or enter the country. Their particulars are obtained directly from their passports. Consequently, only the number and mode of travel of South African residents leaving or entering the country as tourists at computerised ports are available. (It is also not possible to distinguish between emigrants and other people travelling abroad.)

Foreign travellers visiting South Africa still complete arrival forms, but do not complete forms on departure. The particulars of foreign travellers leaving the country are obtained by means of the computer system on basis of the information furnished on arrival.

1.3 Tourism

1.3.7 Departure: South African residents by purpose of visit

1.3.7.1 Johannesburg, Cape Town and Durban International Airports

Stats SA published complete SA residents departure data up to and including December 1992. Since basic information on SA residents departure was not available thereafter, it was not possible to publish data on SA residents departure on a monthly basis for the period January 1993 to October 1993. However, as from 26 October 1993 the Department of Home Affairs implemented a system according to which South African residents departing for overseas from Johannesburg, Cape Town and Durban International Airports, complete departure forms. This system was implemented at these three airports only, as approximately 97% of the SA residents departure left the country through these three ports. This system made it possible to again obtain and process information on South African tourists and SA residents departure leaving the country through these three airports as from November 1993.

1. DEMOGRAPHY

1.4 Documented migration

1.4.3 Self-declared emigrants by country of destination 1/

Stats SA published complete self-declared emigration data up to and including December 1992. Since basic information on self-declared emigration was not available thereafter, it was not possible to publish data on self-declared emigration on a monthly basis for the period January 1993 to October 1993. However, as from 26 October 1993 the Department of Home Affairs implemented a system according to which South African residents departing for overseas from Johannesburg, Cape Town and Durban International Airports, complete departure forms. This system was implemented at these three airports only, as approximately 97% of the self-declared emigrants left the country through these three ports. This system made it possible to again obtain and process information on South African tourists and self-declared emigrants leaving the country through these three airports as from November 1993. In order to estimate the number of self-declared emigrants for the period January 1993 to October 1993, an interpolation was carried out with the aid of a regression model.

2.8	Labour force survey (LFS) comparison: February and September 2000, February and September 2001, and February and September 2002. Labour market measurement - Using the official definition of employment within 95% confidence limits.	2.58

2. LABOUR**2.1 Economically active population aged 15 to 65 years (official definition)****2.1.1 Industry divisions**

Official definition of unemployment: According to the official or strict definition, the unemployed are those people within the economically active population who:

- (a) did not work in the seven days prior to census night,
 (b) wanted to work and were available to start work within a week of census night, and (c) had taken active steps to look for work or to start some form of self-employment in the four weeks prior to census night.

The classification of industries is based on the *Standard Industrial Classification of all Economic Activities (SIC)*.

2. LABOUR

2.2 Employment, salaries and wages

Employment, salaries and wages - Unless otherwise stated in the notes that follow, the following is applicable:

Employment refers to the number of paid employees, including casual and seasonal employees. Annual data are shown as at 30 June of the relevant year, whereas quarterly data are shown as at the last pay-day of the relevant quarter.

Since January 1993 the industrial classification of employment figures is based on the *Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, January 1993*. The major and subgroup classification of the latter industrial classification differs in some cases from the classification that was used until December 1992. The above-mentioned classification is obtainable from Stats SA, free of charge.

Salaries and wages shown are gross salaries and wages, that is, salaries and wages before any deductions are made. Annual figures are shown for the relevant calendar year. Salaries and wages include overtime earnings, all allowances and bonuses, as well as employers' contributions to holiday, pension, provident and medical funds and contributions to the Unemployment Insurance and Compensation Funds.

Average monthly salaries and wages are reflected in the *Bulletin of Statistics* as from December 2000 in Table 2.3.

Ordinary-time hours and overtime hours paid for and vacancies are reflected in the *Bulletin of Statistics* as from March 2001.

2. Labour

2.2 Number of employees and gross salaries and wages according to industry

2.2.1 Mining and quarrying

2.2.1.1 Gold

Mining and quarrying - Employment is the average daily number of persons employed during the relevant quarter. Salt works, power supply companies and iron and steel works are excluded.

2.2 Number of employees and gross salaries and wages according to industry
 2.2.3 Electricity, gas and water supply

The data are based on a sample survey and refer to private establishments and public corporations which have as their main activity the generation and/or distribution of electricity gas and water.

As from 1998 there has been a reclassification of water boards from local governments into the electricity industry. This change was brought about by a new Act, the Water Services Act No. 108 of 1997, which caused a change in the definition of the main industrial activity of the water boards. Water boards are now classified under the Standard Industrial Classification of all Economic Activities (SIC) as the 'collection, purification and distribution of water', which falls under the electricity industry.

 2.2.8.1 Government sector
 2.2.8.1.1 National departments

As from 1998 there has been a reclassification of water boards from local governments into the electricity industry. This change was brought about by a new Act, the Water Services Act No. 108 of 1997, which caused a change in the definition of the main industrial activity of the water boards. Water boards are now classified under the *Standard Industrial Classification of all Economic Activities (SIC)* as the 'collection, purification and distribution of water', which falls under the electricity industry.

2. LABOUR

2.7 Labour force survey (LFS), September 2002

2.7.1 Population of working age by population group, area, gender and labour market status

The LFS is a twice-yearly rotating panel household survey, specifically designed to measure the dynamics of employment and unemployment in the country. It measures a variety of issues related to the labour market, including unemployment rates (official and expanded), according to standard definitions of the International Labour Organisation (ILO).

A rotating panel sample involves visiting the same dwelling units on a number of occasions (in this instance, five at most), and after the panel is established, replacing a proportion of these dwelling units each round (in this instance 20%). New dwelling units are added to the sample to replace those that are taken out. The advantage of this type of design is that it offers the ability to see how the work situation of members of the same dwelling units change over time, while retaining the larger picture of the overall employment situation in the country.

OFFICIAL AND EXPANDED UNEMPLOYMENT RATES

Statistics South Africa (Stats SA) uses the following definition of unemployment as its **official** definition: The *unemployed* are those people within the *economically active population* who, (a) did not work during the seven days prior to the interview, (b) want to work and are available to start work within a week of the interview, and (c) have taken active steps to look for work or to start some form of self-employment in the four weeks prior to the interview. The **expanded unemployment rate** excludes criterion (c).

Among those who are included in the expanded, but not the official definition of unemployment, will be discouraged job seekers (those who said they were unemployed but had not taken active steps to find work in the four weeks prior to the interview).

Stats SA reports on the situation of the unemployed using both the official and the expanded definition. In the present economic climate, there is a proportion of discouraged work seekers who face constraints, for example high travel costs and lack of transport, when seeking work.

2.7.1.1 Official definition of unemployment

Population group and area	Total

2. LABOUR

2.8 Labour force survey (LFS) comparison: February & September 2000, February & September 2001, and February & September 2002

Labour market measurements - Using the official definition of unemployment within 95% confidence limits

LABOUR MARKET CHANGES

Labour market trends: February 2000, September 2000, February 2001, September 2001, February 2002 and September 2002

In the section of rows marked **a**, and in the column labeled 'Estimate (000s)' we see that a total of 11 880 000 people were estimated to be employed in February 2000. The lower limit of this estimate, within 95% confidence limits, is 11 491 000, while the upper limit is 12 268 000. In other words, we are 95% sure that the actual number of people who were employed in February 2000 is somewhere between 11 491 000 and 12 268 000, taking sampling error into account.

In summary, the number of employed people, except for an unusual decrease in September 2001, particularly in subsistence agriculture, has remained constant over time. The number of unemployed has gradually increased. The total number of those who are economically active has also gradually increased, while the number of those who were not economically active has also gradually increased.

3. PRICES

3.1 Production price indices

The production price index (PPI) measures price trends of commodities produced throughout the major sectors of the economy, i.e. agriculture, forestry, fishing, mining, manufacturing, electricity, gas and water and wholesale and retail trade (in the case of imported goods).

All commodities included in the PPI, are classified according to the Standard Industrial Classification of all Economic Activities (SIC). The SIC is based on a standard industrial classification compiled by the United Nations (UN) for international use. Commodities in the manufacturing sector are divided into 23 major industrial groups according to the SIC.

Price information is collected for products known as 'indicator products'. Indicator products are identified as those products whose sale value represents the largest part of the total value of sales (turnover) in an industrial group. Prices are collected at the first sales point after production, which is producers in the case of locally produced commodities, and wholesalers or retailers in the case of imported commodities. Prices 'ex-factory' are requested but 'delivered' or 'free on rail/free on board' are accepted if it is the normal basis of quotation. Where prices are dependent on the quantity purchased or the class of purchaser, the price for the predominant quantity or class of purchaser is collected. Value-added tax (VAT) is excluded and normal discounts generally available to purchasers are deducted from quoted prices.

Where possible price information is collected at successive time intervals for the same grade or quality of commodities. In the case of specialised commodities, such as machinery and transport equipment, price information is collected for equivalent items. Where quality or other changes occur in commodities, or where substitute commodities are introduced, the price indices are adjusted to compensate for any change in the price solely due to quality or similar changes.

Price information refers to the first seven days of the relevant month, except in the mining and agricultural sectors where average prices for the relevant month are collected. Most prices for commodities manufactured locally are collected at three-monthly intervals, while prices of imported commodities are collected monthly. If Statistics South Africa (Stats SA) were notified of price changes for products not surveyed on a monthly basis, products would be surveyed whenever price changes occur.

3.1.1 Commodities for South African consumption

Indices in this table reflect price changes for all commodities for South African consumption, i.e. locally produced and sold, as well as imported commodities.

Base: 2000=100

3. PRICES

3.1 Production price indices

3.1.3 Materials used in certain industries

A third series of indices is also calculated, namely production price indices for materials used in the following industries:

Building and construction
 Building industries
 Civil engineering
 Mechanical engineering
 Electrical engineering

The price information collected for the indices shown in Tables 3.1.1 and 3.1.2 is utilised for the calculation of these indices.

The weights are based on the values of materials used in the relevant industries.

Base: 2000=100

3. PRICES

3.2 Farming price indices

3.2.1 Producers' prices of farm products

Indices of producers' prices of farm products are calculated monthly by the Directorate: Agricultural Statistics and Management Information of the National Department of Agriculture. The base period for the index is the average for the year 1995. The price indices of each product and for each group of products have been weighted according to the gross value of sales for the year 1995. Subsidies, additional payments and premiums to producers have been included in the prices used for the calculation of the index numbers, while levies paid by producers are deducted.

Base: 1995=100

3. PRICES

3.2 Farming price indices

3.2.2 Farming requisites

Indices of certain farming requisites are calculated quarterly by the Directorate: Agricultural Statistics and Management Information of the National Department of Agriculture. The following farming requisites are included: cultivation, harvesting and other implements, spare parts, trucks, tractors, tractors, fertilisers, fuel, feeds, fencing material, dips and sprays, building material, bags and twine. The indices are calculated from retail prices ('free on rail', 'at the coast' or 'at the factory') received quarterly from a number of representative importers, factories and dealers, except in the case of building material, which is based on wholesale prices collected by Stats SA. The base period on which the indices have been calculated is 1995=100. Value-added tax (as from October 1991) is excluded. Annual figures cover the period 1 July to 30 June of the relevant years.

3. PRICES

3.2 Farming price indices

3.2.3 Food basket of farm products - Producers' share of consumer prices (percentages)

The producers' share of the consumer price is the farmer's gross income for the product, expressed as a percentage of the retail price. The remaining portion of the consumer price represents transport, manufacturing and other costs, gross profit of dealers, etc.

The consumer price of each food item is based on an average retail price calculated by Stats SA. The 'food basket' comprises items of which the major content is South African farm produce. Although the weights of these items are based on a Stats SA survey on income and expenditure of households, it does not correspond with the coverage of products used for the calculation of the consumer price index. As from November 1995 the weighting system is based on statistics from the Survey of household expenditure, 1990, while previous weights were based on a similar survey conducted in 1975.

3. PRICES

3.3 Consumer prices

3.3.1 Indices for metropolitan areas

The consumer price index is calculated for each of 13 urban areas in South Africa separately and combined. The average for 2000 is currently used as base (100).

Each of the urban areas for which an index is calculated has its own weight. The weights and indices for the areas are combined by means of the following weights to obtain the weighted average:

	Weight
Cape Peninsula	18,58
Port Elizabeth/Uitenhage	3,56
East London	1,72
Kimberley	0,64
Pietermaritzburg	2,09
Durban/Pinetown	11,23
Pretoria/Centurion/Akasia	17,39
Witwatersrand	38,32
Klerksdorp/Stilfontein/Orkney	0,00
Free State Goldfields	1,91
Bloemfontein	2,48
Nelspruit/Witbank	1,75
Polokwane (Pietersburg)	0,33
	<hr/> 100,00 <hr/>

The consumer price indices for the different urban areas do not permit inter-urban comparisons of price levels or costs of living. The indices show the price changes which have taken place from time to time in each of the urban areas, independently of any other urban area.

3. PRICES

3.3 Consumer prices

3.3.2 Indices for groups - Metropolitan areas

The weighting system of the index is based on the survey of expenditure patterns of households conducted during 2000. Certain expenditures are not taken into account for the purposes of the consumer price index, for example income tax, contributions to pension and provident funds, premiums of life and endowment policies and expenditure of a capital nature (for example payment on home loans, excluding interest). Prices are collected by means of a postal enquiry directly from a representative sample of retail and service establishments in the different areas, or from other organisations, associations or public bodies. Rent and domestic workers' wages are obtained from annual surveys. For most other food items, as well as for clothing, fuel and washing and cleaning materials, prices are collected every month, while for most other items, for example furniture and equipment, personal care requisites, stationery, etc. prices are collected three-monthly. Certain price information is obtained annually or as often as price changes occur. Price information for all items refers to the first seven days of the relevant months.

3. PRICES

3.3 Consumer prices

3.3.3 Seasonally adjusted indices for metropolitan areas

The consumer price index (and its components) is a time series which measures changes in consumer prices over time. A time series (especially an economic time series) normally reflects the combined effects of the underlying seasonal trend, cyclical and irregular factors which may influence it. These factors which form the values of a time series are usually referred to as the components of the time series. Seasonal fluctuations in a time series are those fluctuations which usually tend to occur at about the same time and with about the same magnitude each year. It may be the result of climatic influences or other social and commercial habits (e.g. the price of bread which was revised in October each year).

Businessmen, economists and researchers are often interested to determine whether the values of the latest (say) month or the latest few months of a time series possibly indicate a change in the trend, or if perhaps a 'turning point' in the business cycle has been reached. A short-term change in the course of an index may merely be the result of seasonal influences, while some might want to attribute this to other factors. It may occur that, while differences between successive (say) monthly values of a time series could merely be attributed to seasonal influences, some may want to attach another meaning to this. The primary objective of a seasonal adjustment is to eliminate the influence of a seasonal component which recurs at the same time(s) each year so that the underlying tendency (i.e. the trend and cyclical movement) can be observed more clearly. A seasonally adjusted time series will thus show relatively fewer fluctuations or variations.

In the analysis of a time series (this is a process whereby it is endeavoured to isolate the above-mentioned possible components of a time series separately) Stats SA makes use of the X-11 technique, which was developed by the American Bureau of Census (of the United States of America). Value-added tax has, for the purpose of calculation of the seasonal factors, not been taken into account, as a change in the rate of value-added tax can be regarded as an irregularity of which the influence on an applicable time series is known. In other words, the seasonal factors are based on indices which are compiled from prices before value-added tax has been added. The seasonal factors are applied, or the seasonal adjustments are done on indices which include value-added tax where applicable. Due to the limited time in which the statistical release is always prepared, it has been decided not to calculate seasonal factors concurrently, but for one month in advance. The seasonally adjusted indices for the latest month will, therefore, be calculated with projected seasonal factors which are based on a time series analysis, which has taken into account data up to and including the previous month. Seasonally adjusted indices, however, will be revised annually in January of each year.

The use of seasonally adjusted price indices.

If the (say) monthly changes in a time series (such as a price index) which include a statistically significant seasonal component are of interest, the appropriate seasonally adjusted time series ought to be used. Therefore, the monthly changes in the respective indices in Table 3.3.2 will in future be calculated using seasonally adjusted indices. It should be noted that if the annual changes in a price index are of interest, as in the case with the annual inflation rate, the seasonal effect has no influence and the non-seasonally adjusted indices can be applied.

The use of the consumer price index otherwise varies according to the type of user, e.g. an economist who wishes to analyse economic trends will, for instance, apply the consumer price index in a different manner than an attorney who wishes to calculate the escalation of maintenance granted in a divorce case. The former would rather use the seasonally adjusted indices, while the latter (where the actual increases are of importance) would use the non-adjusted indices.

Where the historical course of the indices is to be used to make projections, the seasonally adjusted indices would be the obvious indices to use, while for the adjustment of, for instance, contracts where the actual change in consumer prices is to be taken into account, the non-adjusted indices would be the more appropriate.

Base: 2000=100

5. MINING

5.1 Indices of the physical volume of mining production

The indices of the physical volume of mining production are based on information furnished by the Minerals Bureau, Department of Minerals and Energy. The weighting factors used for the computation of the indices, are based on the gross values of production of the individual minerals in 2000. Two indices are shown for total mining production, namely an index including gold production and an index which excludes gold production.

Monthly statistics are preliminary and subject to amendments.

1/ Iron ore includes haematite and magnetite.

2/ Other metals (columns 10 and 24) and other non-metals (columns 14 and 28) include all other metallic minerals and other non-metallic minerals which are not shown separately.

3/ Diamonds include mine and alluvial diamonds.

4/ Building materials include the following minerals: gypsum, lime and limestone, vermiculite, fire clay, flint clay, granite or norite, marble, quartzite, schist, shales for cement, siltstone, slate, quarries and brickmaking.

5. MINING

5.2 Production and sales

Amended monthly figures are not published in all cases, but are taken into account when annual figures are compiled. The published monthly figures, therefore, do not necessarily add up to the annual figures.

Gold and silver production is shown in kilograms (kg), i.e. 1 kg = 32 (1 507 troy ounces). Diamond production is published in 1 000 carats (columns 50 and 51), while the production of all other minerals is published in 1 000 metric tons. (1t = 1 000 kg).

5. MINING
5.3 Financial statistics

The information is based on data obtained from the most important mining enterprises in South Africa. The ratios and other derived statistics were calculated from the aggregated survey results, taking into account the relative importance of the individual mines. The data furnished relate to the enterprise as a whole, including all branches (mining and other), but excluding holding and subsidiary companies.

5.3.1 Percentage change in selected items

Per cent

Year or quarter	Percentage change since previous quarter

1/ Rent includes the amount received or paid in respect of land, buildings, plant, machinery, transport and other equipment, leased or hired.

2/ Calculation of net profit (column 90) occurs according to the standard accounting method.

5. MINING

5.3 Financial statistics (concluded)

5.3.4 Capital expenditure on new and used assets expressed as a percentage of turnover

6.4.5	Value of selected assets expressed as a percentage of turnover	6.30

6. MANUFACTURING

6.1 Index of the physical volume of manufacturing production

The calculation of the manufacturing production indices (columns 1 to 108) is based on the value of manufactured products and articles after the effect of price changes has been eliminated by deflation by using appropriate sub-indices of the production price index (PPI). The value of the manufactured products is obtained from a monthly sample survey of manufacturing establishments.

The 1988 manufacturing census provided the frame for the selection of a revised sample implemented as from January 1995. A stratified systematic sample design based on gross output was used. Establishments which commenced operations after the census, have also been taken into account. The indices in this publication differ slightly from previously published indices due to the fact that the weighting factors for combining of the manufacturing major groups to total manufacturing with effect from 1996 were calculated on the basis of the value added data obtained from the 1996 manufacturing census. According to international practice, the indices were arithmetically converted to base 1995=100 since November 1997.

The industrial classification used in this publication is based on the *Standard Industrial Classification of all Economic Activities (SIC), Fifth edition, January 1993*.

6. MANUFACTURING
6.2 Value of sales

Data relating to sales (columns 109 to 426) are collected together with the monthly production data. The sample data are weighted according to the original sample design in order to represent the population of establishments in the manufacturing industry. The sales in this publication differ slightly from previously published data due to the fact that the results of the 1996 census were used to adjust data relating to sales.

The values shown represent net sales (i.e. gross sales less returns, discounts and other deductions) of own manufactured goods, and net charges for work done.

6.2.1 Total manufacturing, manufacturing divisions and manufacturing major groups

(a) Actual values

6. MANUFACTURING

6.3 Value of unfilled orders

6.3.1 Selected manufacturing groups and manufacturing subgroups

Data relating to unfilled orders (columns 427 to 482) are collected with the monthly production data in respect of certain selected manufacturing subgroups and raised to obtain estimated total figures for those manufacturing subgroups. The data in this publication differ slightly from previously published information due to the fact that the results of the 1996 manufacturing census were used to adjust data relating to unfilled orders.

Manufacturing establishments were requested to determine the sales value of unfilled orders without taking into consideration cancellations and any work performed in connection with the orders, or of stocks from which they can be filled. The values of unfilled orders are shown as at the end of the month. Unfilled orders carried over from previous months are included.

(a) Actual values

6. MANUFACTURING

6.4 Financial statistics

The information is based on financial data obtained from the most important manufacturing enterprises in South Africa. The ratios and other derived statistics were calculated from the aggregated survey results, after taking into account the relative importance of the individual enterprises. The data furnished relate to enterprises as a whole, including all branches (manufacturing and other), but excluding holding and subsidiary companies.

6.4.1 Quarterly percentage change in selected items

Per cent

Year or quarter	Percentage change since previous quarter			
	Net profit	Interest paid	Capital expenditure on new assets	Stocks

4	2,34	0,39	0,42	0,23	2,67	1,18	7,82	2,09	2,73

1/ Rent includes the amounts received or paid in respect of land, buildings, machinery, transport and other equipment, leased or hired.

2/ Calculation of net profit occurs according to the standard accounting method.

6. MANUFACTURING

6.4 Financial statistics (concluded)

6.4.4 Capital expenditure on new and used assets expressed as a percentage of turnover

Per cent

Year or quarter	Capital expenditure on new assets 1/				Capital expenditure on used assets 2/
	Buildings, improvements and construction works	Plant, machinery, furniture and equipment	Vehicles	Total	
	507 PINFIN34	508 PINFIN35	509 PINFIN36	510 PINFIN30	
2000	0,54	3,21	0,15	3,90	0,06
2001	0,30	2,92	0,15	3,38	0,04
2000 -1	0,50	3,11	0,17	3,78	0,08
2	0,73	2,99	0,10	3,82	0,09
3	0,52	3,43	0,16	4,11	0,04
4	0,40	3,31	0,16	3,87	0,02
2001 -1	0,24	2,52	0,15	2,91	0,00
2	0,27	3,16	0,16	3,59	0,02
3	0,34	2,98	0,12	3,44	0,07
4	0,35	3,03	0,18	3,56	0,06

1/ Includes erection of new buildings and works, as well as additions to, and alterations of existing buildings and works; new machinery, vehicles and equipment purchased and used machinery directly imported (trade-in allowances have not been deducted); and expenses incidental to the acquisition of assets which have been capitalised, i.e. transfer fees and architects' fees.

2/ Includes the purchase of land, existing buildings and works and used machinery, vehicles and equipment not directly imported by or on behalf of the enterprise.

6.4.5 Value of selected assets expressed as a percentage of turnover

Year or quarter	Book value of land, buildings, etc.	Stocks 1/
	512 PINFIN41	513 PINFIN42
2000	27,67	14,30
2001	23,65	12,97
2000 - 1	121,70	58,56
2	113,62	55,03
3	108,30	56,52
4	98,74	51,03
2001 - 1	105,42	53,03
2	97,62	51,08
3	95,50	50,95
4	86,73	47,56

1/ Stocks include raw materials, work in progress and 'other' stocks (e.g. merchandise, own manufactured articles and factored goods, spares, fuel and oil).

Construction statistics as from June 2003: Boundaries and names of local government institutions

The selected local government institutions listed in the Table of Contents two sets of names, a recently introduced one and an older one. The boundaries of the local government institutions covered by these two sets of names are not necessarily the same. The names of the local government institutions listed in brackets have been included to assist the reader to identify the approximate geographical locality of these new institutions. Note, however, that the data provided in the tables refer to the newly demarcated local government institutions.

For background to the changes that have occurred, readers are referred to the Local Government: Municipal Structures Act (Act No. 117 of 1998), and the Local Government Municipal Demarcation Bill (B36B-98). Further information may also be found on the website of the South African Government at www.gov.za; see section GOVZA: Government System, and the website of the Municipal Demarcation Board at www.demarcation.org.za

7.1 Building statistics - Building plans passed and buildings completed - Private sector

The Building statistics survey is a countrywide survey covering a sample of local government institutions which are involved in the approving of building plans and in the final inspection of buildings completed for the private sector in South Africa. The sample consists of the largest local government institutions, i.e. those that account for approximately 85% of the total rand value of buildings completed.

No direct comparison can be made between building plans passed and buildings completed as an unknown number of building plans are passed and afterwards not executed. Furthermore, the time-lag between the date of passing of a building plan and the date of completion of the building varies considerably.

The value of buildings completed, including additions and alterations, is the estimated value at the time the plans were passed, and the number of dwelling-houses as shown in the tables, refers to the number of houses in respect of which plans were approved.

7.1.1 Building statistics at constant 2000 prices

1. The value of building plans passed and buildings completed at constant prices measure the building activities in terms of ruling prices in a specific base year. The base year regarding building plans passed and buildings completed is 2000.
2. The value of building plans passed at constant prices for each month is obtained by deflating the values at current prices with a price index known as the 'lump sum domestic buildings' as published in Statistical release P0151 (JBCC contract price adjustment provisions work group indices). In order to be applicable, these indices (base February 1991=100) are converted to the base year 2000=100.
3. The value of buildings completed at constant prices is obtained by deflating the values at current prices with the same price index which is used to calculate building plans passed at constant prices. The value of buildings completed is reported as at the time the plans were passed. Since the completion of buildings may extend over a few months to a few years, the current value of buildings completed is deflated by price indices as at the time the plans were passed in order to calculate the value of buildings completed at the time the plans were passed. Therefore, the duration of the completion of different types of buildings are taken into account in ascertaining the deflators, e.g. the value of dwelling-houses completed at constant prices at January 2000 is obtained by deflating the current value of dwelling-houses completed for January 2000 with the price index of a month six months prior to January 2000. Furthermore, the value of other residential buildings, non-residential buildings and additions and alterations at constant prices, is obtained by deflating the current values with price indices of 12 months, 18 months and 12 months prior to the relevant month, respectively.

7. CONSTRUCTION

7.3 Buildings completed - Private sector

The figures in respect of buildings completed should not be compared with those of building plans passed, because the extent of cancellations subsequent to the passing of the building plans, as well as that of the resubmission of plans for passing, is unknown. Furthermore, there is a time-lag between the date on which a plan is passed and the date on which the building is completed.

electricity

8.1 Units produced and consumed - Actual and seasonally adjusted

8.1

8. ELECTRICITY

8.1 Units produced and consumed

The data are collected on a sample basis and raised to obtain estimated figures. The level of the data was adjusted according to the results of the 1995 census of electricity, gas and steam.

The figures shown, relate to public supply undertakings and self-producers. Public supply undertakings comprise Eskom and local authorities, while self-producers are undertakings which, in addition to their main activities, themselves produce electric energy intended in greater part or in its entirety to meet their own needs - mines, manufacturing establishments and Transnet Ltd are, *inter alia*, included.

9. INTERNAL TRADE
9.1 Wholesale trade

In order to be classified as a wholesaler (columns 1-75) a firm must derive 50 per cent or more of its income from sales of merchandise to other businesses and institutions.

9.1.1 Value of sales by type of business

The value of sales at constant June 1995 prices in respect of each type of business is obtained by deflating the sales value at current prices by means of sub-indices of the production price index on base June 1995=100. The amounts show represent net cash and credit sales and instalment sale transactions (VAT is excluded). The data are collected on a firm basis.

The figures in columns 1-44 represent estimated total sales of merchandise in the wholesale trade.

9. INTERNAL TRADE

9.1 Wholesale trade

9.1.2 Financial statistics

The information is based on financial data obtained from the most important wholesale enterprises in South Africa. The ratios and other derived statistics were calculated from the aggregated survey results without taking into account the relative importance of the individual enterprises. The data furnished relate to enterprises as a whole, including all branches (wholesale trade and other), but excluding holding and subsidiary companies.

9.1.2.1 Quarterly percentage change in selected items

Per cent

Year or quarter	Percentage change since previous quarter			
	Net profit	Interest paid	Capital expenditure on new assets	Selected assets
				Stocks

4	18,09	35,94
2001 - 1	20,17	33,72
2	19,14	33,67
3	19,51	32,45
4	16,89	29,27

9. INTERNAL TRADE**9.2 Retail trade**

In order to be classified as a retailer (columns 76-247), a firm must derive more than 50 per cent of its income from sales of merchandise to the general public for private or domestic consumption. The data by motor service stations and dealers in motor vehicles, spares and accessories for motor vehicles and tyres, are classified as motor trade and appear in columns 248-310. The data are collected on a firm basis.

9.2.1 Value of sales by type of business**9.2.1.1 Actual values**

The figures in columns 76-213 represent estimated total sales of merchandise by retailers and include VAT and finance charges. The value of sales at constant 1995 prices is obtained by deflating the sales value at current prices by means of sub-indices of the consumer price index on base 1995=100.

9. INTERNAL TRADE

9.2 Retail trade

9.2.5 Financial statistics

The information is based on financial data obtained from the most important retail trade enterprises in South Africa. The financial ratios and other derived statistics were calculated from the aggregated survey results without taking into account the relative importance of the individual enterprises. The data furnished relate to enterprises as a whole, including all branches (retail trade and other), but excluding holding and subsidiary companies.

9.2.5.1 Quarterly percentage change in selected items

Per cent

Year or quarter	Percentage change since previous quarter			
	Net profit	Interest paid	Capital expenditure on new assets	Selected assets

3	30,07	22,27	52,34
4	27,19	18,06	45,25

9. INTERNAL TRADE

9.3 Motor trade

9.3.1 Motor trade - Retail trade in motor vehicles and accessories

9.3.1.1 Trading income - Sales and workshop income

The data are collected on an enterprise (firm) basis. The figures represent estimated totals for the retail trade in motor vehicles and accessories and do not represent the total sales of vehicles and accessories in South Africa because the wholesale trade of vehicles and accessories are excluded.

Prior to January 2000, Stats SA collected and published information on retail trade in motor vehicles and accessories including value-added tax (VAT). Due to users' needs, specifically compilers of National Accounts, Stats SA has overhauled and re-designed the questionnaire. As from January 2000, Stats SA collects information regarding the retail trade in motor vehicles and accessories excluding VAT. In order to provide users with a continuous time series, Stats SA has calculated the retail trade in motor vehicles and accessories excluding VAT for the period which is published in this publication.

'Other' (columns 257, 258, 266 and 267) includes caravans, tractors and trailers.

9. INTERNAL TRADE
 9.3 Motor trade
 9.3.1 Motor trade - Retail trade in motor vehicles and accessories (concluded)
 9.3.1.1 Trading income - Sales and workshop income

As from January 2000, Stats SA use the new re-designed questionnaire. This questionnaire collects information regarding workshop income (column 268) which now includes the income from the sales of batteries and tyres, transferred and fitted in the workshop. Therefore, the sales of batteries and tyres transferred and fitted in the workshop are no longer reflected under the category spares and accessories (column 270), but are included in the category workshop income (column 268).

Column 268 includes labour charges and the sales of spares and accessories transferred to the workshop. Column 270 represents direct sales of spares and accessories, including batteries and tyres not transferred to the workshop. 'Other' (column 271) includes the income from the sales of petrol, diesel oil, lubricants, tools, garage equipment, towing services, commission, etc.

Year or month	Workshop income	Other trading income			Cash, credit and instalment sale transactions

9. INTERNAL TRADE

9.3 Motor trade (wholesale and retail)

9.3.2 Financial statistics

The information is based on financial data obtained from the most important motor trade enterprises in South Africa. The ratios and other derived statistics were calculated from the aggregated survey results without taking into account the relative importance of the individual enterprises. The data furnished relate to enterprises as a whole, including all branches (motor trade and other), but excluding holding and subsidiary companies.

9.3.2.1 Quarterly percentage change in selected items

Per cent

Year or quarter	Percentage change since previous quarter

9. INTERNAL TRADE

9.4 Hotels

9.4.1 Trading statistics

Section 9.4 shows the results of the monthly sample survey of hotels. The sample consists of 414 respondents. All three-, four- and five-star hotels are included in the sample, while a systematic sample is drawn for ungraded hotels and one- and two-star hotels. The results of the sample are raised by weights to represent the total hotels in South Africa. The number of rooms available forms the basis of the weight calculation. Weights are calculated for each star grading within each tourism region which are used to estimate the universum of hotels in South Africa.

9.4 Hotels

9.4.2 Financial statistics

The data refer to enterprises mainly engaged in the hotel industry and are based on the results of a quarterly sample survey. The information is based on financial data obtained from the most important hotels in South Africa. The ratios and other derived statistics were calculated from the aggregated survey results without taking into account the relative importance of the individual hotels. Information relating to foreign branches and holding or subsidiary companies are excluded.

9. INTERNAL TRADE**9.5 Civil cases**

A revised monthly sample survey was introduced with effect from January 1994. The data are based on information collected from a sample of 152 magistrates' offices in South Africa, excluding the former Transkei, Bophuthatswana, Venda and Ciskei (TBVC States). The monthly sample particulars are raised to obtain estimated totals. The raising factors are based on information relating to all civil cases recorded during the year ended 30 June 1992. The total number of civil cases recorded by the magistrates' offices in the sample represent 95 per cent of the civil cases recorded by all magistrates' and commissioners' offices during the year ended 30 June 1992. Civil cases recorded in selected magistrates' offices are shown in this table.

Civil cases recorded (columns 450, 460 and 470) - relate to all cases, in other words debt cases as well as claims for damages, ejection orders and other non-debt cases are included.

Civil summonses (columns 451-459, 461-469 and 471-479) - relate to debt cases only and thus exclude claims for damages, ejection orders and other non-debt cases.

9.5.1 Cases recorded and summonses issued for debt - Number**(a) Total - Business enterprises and private persons**

1/ Includes Cape Town, Bellville, Wynberg, Goodwood, Simon's Town, Kuils River and Mitchell's Plain.

9. INTERNAL TRADE

9.6 Insolvencies

The figures are based on information extracted from the Master's Notices published currently in the Government Gazette and refer to insolvencies under the Insolvency Act No.24 of 1936. Insolvencies only relate to private persons, individuals and partnerships. The statistics show the number of final sequestrations. This does not represent the number of persons involved, as a partnership is counted as one insolvency, irrespective of the number of partners.

9.6.1 Private individuals and partnerships by province and the agricultural sector - Number

11. TRANSPORT

Work performance statistics are reflected from a sample of private sector enterprises (firms) primarily engaged in the conveyance of goods for remuneration, and Transnet Ltd. The sample was drawn from the 1986 census of transport and allied services, and estimates were obtained by raising data collected on basis of a stratified systematic sample.

11.1 Transport by private sector institutions for remuneration - Goods

1/ The amount received (columns 54 and 55) for or paid (columns 58 and 59) on land, buildings, works, machinery, vehicles and equipment rented or hired.

2/ Calculation of net profit (column 62) occurs according to the standard accountancy method.

11. TRANSPORT
 11.2 Financial statistics
 11.2.2 Public transport by private enterprises for reward - Goods (concluded)
 11.2.2.4 Capital expenditure on new and used assets expressed as a percentage of turnover

Per cent

Year or quarter	Capital expenditure on new assets 1/				Capital expenditure on used assets 2/
	Buildings, improvements and construction works	Plant, machinery furniture and equipment	Vehicles	Total	
	65	66	67	68	
2000	0,41	0,62	5,31	6,33	1,16
2001	0,42	0,77	7,23	8,36	0,32
2000 - 1	0,34	0,55	4,09	4,97	0,42
2	0,10	0,88	4,32	5,31	2,64
3	1,01	0,42	5,86	7,29	0,82
4	0,17	0,62	6,96	7,74	0,76
2001 - 1	1,31	0,77	9,77	11,85	0,93
2	0,11	0,68	5,81	6,60	0,18
3	0,23	0,88	8,45	9,57	0,12
4	0,04	0,76	4,89	5,69	0,06

1/ Includes erection of new buildings and works, as well as additions to, and alterations of existing buildings and works; new machinery, vehicles and equipment purchased and used machinery directly imported (trade-in allowances have not been deducted); and expenses incidental to the acquisition of assets which have been capitalised, i.e. transfer fees and architects' fees.

2/ Includes the purchase of land, existing buildings and works and used machinery, vehicles and equipment not directly imported by or on behalf of the enterprise.

11.2.2.5 Value of selected assets expressed as a percentage of turnover

Year or quarter	Book value of land, buildings, etc.	Stocks

12. NATIONAL ACCOUNTS

12.1 Gross domestic product (GDP)

12.1.1 Quarterly GDP by industry at constant 1995 prices

The national accounts figures cover South Africa. The estimates in respect of agriculture in the case of the gross domestic product (GDP) (both at current and constant prices) are done by the Directorate: Statistical Information of the National Department of Agriculture.

The value added at basic prices is equal to output minus intermediate consumption.
