DISCUSSION DOCUMENT

D0160

Residential Property Price Index

February 2023

**Embargoed until:
13 July 2023
09:00**

This discussion document provides experimental statistics on residential property price indices from January 2018 to January 2023. Time series data are available from January 2010. These are not official statistics; rather, the aim of the document is to invite comment regarding its content, layout, and the provision of data. Subsequent to stakeholder interaction and feedback, an official statistical release will be developed and published.

Introduction

Statistics South Africa (Stats SA) has developed a residential property price index (RPPI) in partnership with the South African Reserve Bank (SARB) and with the support of the International Monetary Fund (IMF). The data are released in the form of experimental statistics for the purposes of stakeholder evaluation and feedback. The RPPI is compiled according to internationally accepted methods.

The RPPI aims to measure the changes in the price of new and existing residential properties purchased by households. Only market prices are considered which include the price of the land on which residential buildings are located.

Records of property transactions registered with the Office of the Chief Registrar of Deeds (Deeds office) are the source data for the index. The Deeds office data is an administrative record of all property transactions in South Africa. Among other variables, it includes information about the price, size and type of the property and the type of buyer and seller. On average, there is a four-month lag between the time a transaction is completed and the time it is recorded by the Deeds office. As a result, the RPPI is published five months after the reference month.

The RPPI excludes out of scope transactions and includes transactions where the buyer is an individual, and the seller is an individual, company, estate, foundation or body corporate. Only free standing houses or sectional title properties (e.g. flats, townhouses or other houses in a gated complex) are included. Price and size are used as initial cut offs to remove abnormal transactions and further outliers are identified and removed using statistical techniques.

A rolling window time dummy hedonic regression model has been developed to compute the index. The model includes the data of 12 months (the window), with time dummies included for each month. The 12-month window has the advantage of keeping the coefficients relatively up-to-date and so takes account of changes in price determinants as market conditions change. The model controls for location, type of property (free standing or sectional title) and the size of the property. Suburbs within each municipality provide the location variable. The model includes an interaction term between size and type of dwelling.

Price indices are derived from the estimated coefficients on the time dummies. Each month the model is moved forward one period and re-estimated. The overall price index is constructed by chaining together the price indices from these rolling windows and applying a smoothing algorithm (a Henderson filter).

Aggregated indices for each year are weighted according to the total sales value of two years prior. For example, the results for 2023 are weighted based on the sales value of 2021. Weights will be updated annually with effect from the January RPPI each year.

The Deeds office data is continuously updated and therefore Stats SA allows for revisions of the indices. The RPPIs for the latest 12 months will be considered preliminary in alignment with the 12-month rolling window period of the regression model.

Further information can be found in the:

- RPPI sources and methods document - https://www.statssa.gov.za/?page_id=2528; and
- first RPPI discussion document - https://www.statssa.gov.za/?page_id=1854&PPN=D0160.

Stats SA welcomes feedback on this discussion document. Comments should be directed to:

Patrick Kelly, Patrickke@statssa.gov.za, (012) 310 8290

Key findings as at February 2023

Annual national residential property price inflation was 3,7% in February 2023, down from 3,9% in January 2023. The residential property price index (RPPI) increased by 0,2% month-on-month in February 2023.

The main contributors to the 3,7% annual national inflation rate were Western Cape and Gauteng.

Western Cape increased by 5,4% year-on-year, and contributed 1,8 percentage points.

Gauteng increased by 2,2% year-on-year, and contributed 0,9 of a percentage point.

The RPPI for all metropolitan areas increased by 3,0% between February 2022 and February 2023. The main contributors to the 3,0% annual inflation rate for metropolitan areas were City of Cape Town, City of Johannesburg and Ekurhuleni.

City of Cape Town increased by 4,3% year-on-year, and contributed 1,3 percentage points.

Ekurhuleni increased by 2,9% year-on-year, and contributed 0,4 of a percentage point.

City of Johannesburg increased by 2,3% year-on-year, and contributed 0,5 of a percentage point.

Joe de Beer

Deputy Director-General: Economic Statistics

Detailed results

Table 1 – Residential property price index: national and provincial indices

| Province | Weight | Index (Dec 2020=100) | | | % change | |
|----------------------|--------|----------------------|----------|----------|-----------------------|-----------------------|
| | | Feb 2022 | Jan 2023 | Feb 2023 | Feb 2023 vs. Jan 2023 | Feb 2023 vs. Feb 2022 |
| National | 100,00 | 107,2 | 111,0 | 111,2 | 0,2 | 3,7 |
| Western Cape | 32,08 | 109,1 | 114,8 | 115,0 | 0,2 | 5,4 |
| Eastern Cape | 5,01 | 105,6 | 109,0 | 109,5 | 0,5 | 3,7 |
| Northern Cape | 0,80 | 100,6 | 109,4 | 109,2 | -0,2 | 8,5 |
| Free State | 2,62 | 107,9 | 109,1 | 109,3 | 0,2 | 1,3 |
| KwaZulu-Natal | 11,25 | 106,8 | 108,4 | 108,5 | 0,1 | 1,6 |
| North West | 2,40 | 111,1 | 113,7 | 113,3 | -0,4 | 2,0 |
| Gauteng | 41,92 | 106,1 | 108,1 | 108,4 | 0,3 | 2,2 |
| Mpumalanga | 2,64 | 102,7 | 117,3 | 118,8 | 1,3 | 15,7 |
| Limpopo | 1,28 | 111,8 | 124,0 | 124,0 | 0,0 | 10,9 |

Explanatory notes

| | |
|------------------------------|--|
| Data source | The primary source data used to estimate the RPPI comes from the Office of the Chief Registrar of Deeds (Deeds office). It is an administrative record of all property transactions in South Africa. |
| Purpose of the survey | The RPPI aims to measure the rate at which the prices of residential properties purchased by households change over time. It measures this rate at national, provincial and metropolitan municipality levels. |
| Revisions | The RPPIs for the latest 12 months are preliminary and subject to revision. |
| Scope of the survey | Both new and existing dwellings are covered. Only market prices from actual transactions are considered. They include the price of the land on which residential buildings are located. |
| The model | <p>The time dummy hedonic regression method was used to estimate the indices.</p> <p>According to this method, regression analysis is used to describe the relation between the prices set by the market for residential property and the available characteristics.</p> <p>The prices and characteristics of all dwellings for 12 months are pooled in the same regression and a dummy variable is established for each period. The estimated coefficients of these dummy variables are used to derive the index.</p> <p>The resulting indices show a high level of volatility and in order to provide a more meaningful interpretation of changes in the index, a smoothing algorithm (a Henderson filter) is applied.</p> |
| Weights | <p>The sales values of the most recent complete calendar year are calculated from the Deeds office data and are used to compile the weights. The 'most recent complete calendar year' refers to the most recent calendar year that is no longer open for revision. The weights in this publication are based on the sales values for 2021.</p> <p>Weights will be updated annually with effect from the January RPPI each year.</p> |

Further information on the sources of information, weighting structure and methods of compilation of the RPPI can be found in the RPPI sources and methods document, available on the Stats SA website at:

https://www.statssa.gov.za/?page_id=2528.

Glossary

| | |
|---|--|
| Annual percentage change | The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage. |
| Average annual percentage change | The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. |
| Chain linking | The construction of a continuous price series by multiplying together price indices that have been calculated using different weights reference periods. The resulting index is referred to as a chained index. Linking is intended to ensure that the individual indices on all levels show the correct development through time, but leads to non-additivity. The RPPI is chained annually as new weights are implemented. |
| Metropolitan municipality | Local authority that has a municipal executive and legislative authority in an area that includes more than one municipality, as described in section 155(1) of the Constitution as a category A municipality. |
| Monthly percentage change | The monthly percentage change is the change in the index of the relevant month compared with the index of the previous month expressed as a percentage. |
| Residential Property Price Index | Residential property price indices measure the changes in the price of residential properties. |

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's 11 official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za.

Forthcoming issues

| Issue | Expected release date |
|------------|-----------------------|
| March 2023 | 10 August 2023 |
| April 2023 | 14 September 2023 |
| May 2023 | 12 October 2023 |
