Explanatory notes

| | | |
|--------------------------------------|-----------|--|
| Introduction | 1 | Statistics South Africa (Stats SA) conducts a monthly sample survey of civil cases recorded and civil summonses for debt issued in South Africa. This information is obtained from selected magistrates' offices. |
| | 2 | Except for cases recorded, all other information relates to debt cases only, therefore claims for damages, ejection orders and other non-debt cases are excluded. |
| Purpose of the survey | 3 | The survey of civil cases for debt covers a sample of magistrates' offices in South Africa. This survey collects information regarding civil cases recorded, civil summonses issued and civil judgements recorded in order to provide users with information on the extent of unpaid debt in South Africa. The results of the survey are used by the private and public sectors as an indicator of economic performance. |
| Scope of the survey | 4 | This survey covers: <ul style="list-style-type: none"> • number of civil cases recorded; • number of civil summonses issued for debt; • number of civil judgements recorded for debt; and • value of civil judgements recorded for debt. |
| Statistical unit | 5 | The statistical unit for collection of information is a magistrate's office. Magistrates' offices include the small claims courts. The largest magistrates' offices in South Africa are included in the monthly survey of civil cases for debt. The monthly survey of 203 magistrates' courts represents approximately 98% of all cases in South Africa. |
| Survey methodology and design | 6 | The survey is conducted by email, fax and telephone each month from 203 magistrates' offices. |
| Collection rate | 7 | The preliminary collection rate for the civil cases for debt survey for June 2018 was 85,7%. The improved collection rate for May 2018 was 86,2%. |
| Seasonal adjustment | 8 | Seasonally adjusted estimates of all categories are generated each month, using the X-12 Seasonal Adjustment Program developed by the US Bureau of the Census, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for civil cases for debt is described in more detail on the Stats SA website: Click to download seasonal adjustment for civil cases for debt. |
| Trend cycle | 9 | The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimate the underlying trend cycle. |
| Unpublished statistics | 10 | In some cases Stats SA can also make available statistics which are not published. |

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilize, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.
