INFLATION OVERVIEW

The headline CPI annual inflation rate in May 2007 was 6,9%.

The annual change in CPIX, the monetary policy inflation target measure, was 6,4% in May 2007.

KEY FIGURES

Main index	Index (2000=100)			Percentage change between	
	May 2006	Apr 2007	May 2007	Apr 2007 and May 2007	May 2006 and May 2007
CPI (historical metropolitan areas)	132,6	141,0	141,8	+0,6	+6,9
CPI excluding interest rates on mortgage bonds (CPIX) (historical metropolitan and other urban areas)	140,0	148,0	148,9	+0,6	+6,4
CPI for rural areas	135,4	144,7	145,9	+0,8	+7,8
CPI for total country	134,3	143,0	143,9	+0,6	+7,1
CPI for food (historical metropolitan areas)	146,3	157,7	159,1	+0,9	+8,7
CPI excluding food (historical metropolitan areas)	129,3	136,9	137,7	+0,6	+6,5
Core index (historical metropolitan areas)	138,7	145,9	147,0	+0,8	+6,0

The headline inflation rate (year-on-year) decreased by 0,1 of a percentage point in May 2007 from the 7,0% increase recorded in April 2007. The year-on-year increase in the CPIX for May 2007 was 0,1 of a percentage point higher than the 6,3% y/y increase recorded in April 2007.

The main driver of the decrease in year-on-year consumer price inflation in May 2007 was:

- The CPI annual rate for transport which decreased to 7,1% at May 2007 from 7,7% at April 2007.
 - The CPI annual rate for petrol decreased to 14,8% at May 2007 from 16,9% at April 2007. However the price of petrol increased to R6,88 per litre in May 2007 from R6,54 per litre in April 2007 an increase of 34c/l in comparison to the 39c/l increase for the same period last year.

This decrease was partially counteracted by an increase in the annual rate of change for:

- The CPI annual rate for food which increased to 8,7% at May 2007 from 8,4% at April 2007.
 - The CPI annual rate for milk, cheese and eggs increased to 9,0% at May 2007 from 6,7% at April 2007.
 - The CPI annual rate for fruit and nuts increased to 9,5% at May 2007 from 6,7% at April 2007.

The main contributors to the annual increase of 6,9% in the CPI at May 2007 were food (+ 2,0 percentage points), housing (+ 1,9 percentage points), transport (+ 1,0 percentage point), medical care and health expenses (+ 0,5 of a percentage point), household operation (+ 0,4 of a percentage point), education (+ 0,4 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.1, p.18).

The annual rate of increase in food prices for the historical metropolitan areas was 8,7% at May 2007. This rate was 0,3 of a percentage point higher than the corresponding annual rate of 8,4% at April 2007. The increase of 8,7% was due to increases in the prices of meat, grain products, other food products, milk, cheese and eggs, fruit and nuts, fats and oils, fish and other seafood, vegetables, coffee, tea and cocoa and sugar.

The annual rate of increase in the price index for non-food items for metropolitan areas was 6,5% at May 2007. This rate was the same as the corresponding annual rate of 6,5% at April 2007. Although this rate remained unchanged annual increases occurred in the price indices for housing (+ 9,8%), cigarettes, cigars and tobacco (+ 9,6%), education (+ 8,0%), fuel and power (+ 7,6%), household operation (+ 7,6%), transport (+ 7,1%), alcoholic beverages (+ 6,4%), personal care (+ 6,1%), medical care and health expenses (+ 5,6%), reading matter (+ 5,2%), non-alcoholic beverages (+ 4,7%), other products (+ 3,3%), furniture and equipment (+ 1,1%), communication (+ 0,3%) and recreation and entertainment (+ 0,3%). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 9,1%).

NOTES

CPI for June 2007

No additional surveys will be conducted in June 2007.

Amalgamated releases

Stats SA has combined the previously two CPI publications (Headline and Rural) into this one publication from January 2007. All the information that was previously available in the two publications is available in the combined release. In the January 2007 CPI publication (P0141) is a summarised table with the old and new table numbers.

KEY FINDINGS

A. Consumer Price Index

1. Metropolitan areas

The headline inflation rate at May 2007 (i.e. the Consumer Price Index for the historical metropolitan areas at May 2007 compared with that at May 2006) was 6,9%

The official inflation rate (i.e. the percentage change in the CPI for the historical metropolitan areas at May 2007 compared with that at May 2006) was 6,9% at May 2007. This rate was 0,1 of a percentage point lower than the corresponding annual rate of 7,0% at April 2007 (i.e. the percentage change in the CPI for the historical metropolitan areas at April 2007 compared with that at April 2006) (see table 2.1.1, p.16). This lower annual rate at May 2007 can be explained by a decrease in the annual rate of change for:

- The CPI annual rate for transport which decreased to 7,1% at May 2007 from 7,7% at April 2007.
- The CPI annual rate for petrol decreased to 14,8% at May 2007 from 16,9% at April 2007. However the price of petrol increased to R6,88 per litre in May 2007 from R6,54 per litre in April 2007 an increase of 34c/l in comparison to the 39c/l increase for the same period last year.

This decrease was partially counteracted by an increase in the annual rate of change for:

- *The CPI for food which increased to 8,7% at May 2007 from 8,4% at April 2007.*
- *The CPI annual rate for milk, cheese and eggs increased to 9,0% at May 2007 from 6,7% at April 2007.*
- *The CPI annual rate for fruit and nuts increased to 9,5% at May 2007 from 6,7% at April 2007.*

From April 2007 to May 2007 the Consumer Price Index for the historical metropolitan areas increased by 0,6%.

The main contributors to the annual increase of 6,9% in the CPI at May 2007 were food (+ 2,0 percentage points), housing (+ 1,9 percentage points), transport (+ 1,0 percentage point), medical care and health expenses (+ 0,5 of a percentage point), household operation (+ 0,4 of a percentage point), education (+ 0,4 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.1, p.18).

From April 2007 to May 2007 the Consumer Price Index for the historical metropolitan areas increased by 0,6%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.2, p.18).

2. Metropolitan and other urban areas

The inflation rate for the historical metropolitan and other urban areas was 7,0% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006)

The inflation rate for the historical metropolitan and other urban areas was 7,0% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006). This rate was the same as the corresponding annual rate of 7,0% at April 2007.

From April 2007 to May 2007 the Consumer Price Index for the historical metropolitan and other urban areas increased by 0,6%.

The annual increase of 7,0% in the Consumer Price Index for the historical metropolitan and other urban areas was mainly due to annual contributions in the price indices for food (+ 2,1 percentage points), housing (+ 1,9 percentage points), transport (+ 1,0 percentage point), medical care and health expenses (+ 0,5 of a percentage point), household operation (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.3, p.18).

From April 2007 to May 2007 the Consumer Price Index for the historical metropolitan and other urban areas increased by 0,6%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.4, p.18).

3. Rural areas

The inflation rate for the rural areas was 7,8% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006)

The inflation rate for the rural areas was 7,8% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006). This rate was 0,4 of a percentage point higher than the corresponding annual rate of 7,4% at April 2007. This higher rate at May 2007 can be explained by an increase in the annual rate of change for:

- ***The CPI for food which increased to 12,1% at May 2007 from 10,9% at April 2007.***

From April 2007 to May 2007 the Consumer Price Index for the rural areas increased by 0,8%.

The annual increase of 7,8% in the Consumer Price Index for the rural areas was mainly due to annual contributions in the price indices for food (+ 5,4 percentage points), household operation (+ 0,6 of a percentage point), transport (+ 0,4 of a percentage point), housing (+ 0,3 of a percentage point), personal care (+ 0,3 of a percentage point), fuel and power (+ 0,2 of a percentage point), medical care and health expenses (+ 0,2 of a percentage point) and education (+ 0,2 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.5, p.19).

From April 2007 to May 2007 the Consumer Price Index for the rural areas increased by 0,8%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,7 of a percentage point) and transport (+ 0,1 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.6, p.19).

4. Total country

The inflation rate for the total country was 7,1% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006)

The inflation rate for the total country was 7,1% at May 2007 (i.e. the CPI at May 2007 compared with that at May 2006). This rate was the same as the corresponding annual rate of 7,1% at April 2007). Although this rate was unchanged an increase occurred in the annual rate of change for:

- ***The CPI for food which increased to 9,8% at May 2007 from 9,1% at April 2007.***

However, this increase was partially counteracted by decrease in the annual rate of change for:

- ***The CPI for transport which decreased to 6,7% at May 2007 from 7,4% at April 2007.***

From April 2007 to May 2007 the Consumer Price Index for the total country increased by 0,6%.

The annual increase of 7,1% in the Consumer Price Index for the total country was mainly due to annual contributions in the price indices for food (+ 2,7 percentage points), housing (+ 1,6 percentage points), transport (+ 0,9 of a percentage point), household operation (+ 0,4 of a percentage point), medical care and health expenses (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.7, p.19).

From April 2007 to May 2007 the Consumer Price Index for the total country increased by 0,6%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol)(see table 3.8, p.19).

B. Consumer Price Index excluding interest rates on mortgage bonds (CPIX)

1. Metropolitan areas

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan areas was 6,1% at May 2007 (i.e. the percentage change in the CPIX at May 2007 compared with that at May 2006)

The annual percentage change in the CPIX for the historical metropolitan areas was 6,1% at May 2007 (i.e. the percentage change in the CPIX at May 2007 compared with that at May 2006). This rate was 0,1 of a percentage point lower than the corresponding annual rate of 6,2% at April 2007 (i.e. the percentage change in the CPIX for the historical metropolitan areas at April 2007 compared with that at April 2006).

From April 2007 to May 2007 the CPIX for the historical metropolitan areas increased by 0,6%.

The annual increase of 6,1% in the CPIX for the historical metropolitan areas was mainly due to annual contributions in the price indices for food (+ 2,2 percentage points), transport (+ 1,1 percentage points), housing excluding interest rates on mortgage bonds (+ 0,7 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), household operation (+ 0,4 of a percentage point), education (+ 0,4 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.9, p.20).

From April 2007 to May 2007 the CPIX for the historical metropolitan areas increased by 0,6%. This monthly increase was due to monthly contributions in the price indices for transport (+ 0,4 of a percentage point, mainly due to a 34c/l increase in the price of petrol) and food (+ 0,2 of a percentage point) (see table 3.10, p.20).

2. Metropolitan and other urban areas

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan and other urban areas was 6,4% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding interest rates on mortgage bonds, for the historical metropolitan and other urban areas was 6,4% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006). This rate was 0,1 of a percentage point higher than corresponding annual rate of 6,3% at April 2007.

From April 2007 to May 2007 the CPIX for the historical metropolitan and other urban areas increased by 0,6%.

The annual increase of 6,4% in the CPIX for the historical metropolitan and other urban areas was mainly due to annual contributions in the price indices for food (+ 2,4 percentage points), transport (+ 1,1 percentage points), housing, excluding interest rates on mortgage bonds (+ 0,7 of a percentage point), household operation (+ 0,5 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), education (+ 0,4 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.11, p.20).

From April 2007 to May 2007 the CPIX for the historical metropolitan and other urban areas increased by 0,6%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.12, p.20).

3. Rural areas

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the rural areas was 7,6% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the rural areas was 7,6% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006). This rate was 0,4 of a percentage point higher than the corresponding annual rate of 7,2% at April 2007.

From April 2007 to May 2007 the CPIX for the rural areas increased by 0,9%.

The annual increase of 7,6% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the rural areas was mainly due to annual contributions in the price indices for food (+ 5,4 percentage points), household operation (+ 0,6 of a percentage point), transport (+ 0,4 of a percentage point), personal care (+ 0,4 of a percentage point), fuel and power (+ 0,2 of a percentage point), medical care and health expenses (+ 0,2 of a percentage point) and education (+ 0,2 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,3 of a percentage point) (see table 3.13, p.21).

From April 2007 to May 2007 the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the rural areas increased by 0,9%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,7 of a percentage point), fuel and power (+ 0,1 of a percentage point) and transport (+ 0,1 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.14, p.21).

4. Total country

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the total country was 6,6% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the total country was 6,6% at May 2007 (i.e. the CPIX at May 2007 compared with that at May 2006). This rate was 0,2 of a percentage point higher than the corresponding annual rate of 6,4% at April 2007.

From April 2007 to May 2007 the CPIX for the total country increased by 0,7%.

The annual increase of 6,6% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the total country was mainly due to annual contributions in the price indices for food (+ 2,9 percentage points), transport (+ 0,9 of a percentage point), housing excluding interest rates on mortgage bonds (+ 0,7 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), household operation (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point), education (+ 0,3 of a percentage point), personal care (+ 0,3 of a percentage point) and cigarettes, cigars and tobacco (+ 0,2 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.15, p.21).

From April 2007 to May 2007 the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the total country increased by 0,7%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,4 of a percentage point) and transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol) (see table 3.16, p.21).

C. Core Inflation Rate

1. Metropolitan areas

The core inflation rate for the historical metropolitan areas was 6,0% at May 2007 (i.e. the core index at May 2007 compared with that at May 2006). This rate was 0,1 of a percentage point higher than the corresponding annual rate of 5,9% at April 2007.

From April 2007 to May 2007 the core index for the historical metropolitan areas increased by 0,8%.

The annual increase of 6,0% in the core index for the historical metropolitan areas was mainly due to annual contributions in the price indices for transport (+ 2,0 percentage points), food (+ 1,0 percentage point), housing (+ 0,7 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), fuel and power (+ 0,5 of a percentage point), education (+ 0,4 of a percentage point), household operation (+ 0,3 of a percentage point), personal care (+ 0,3 of a percentage point) and cigarettes, cigars and tobacco (+ 0,2 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3.17, p.22).

From April 2007 to May 2007 the core index for the historical metropolitan areas increased by 0,8%. This monthly increase was due to monthly contributions in the price indices for transport (+ 0,5 of a percentage point, mainly due to a 34c/l increase in the price of petrol), food (+ 0,2 of a percentage point) and housing (+ 0,1 of a percentage point) (see table 3.18, p.22).

2. Metropolitan and other urban areas

The core inflation rate for the historical metropolitan and other urban areas was 6,0% at May 2007 (i.e. the core index at May 2007 compared with that at May 2006). This rate was 0,2 of a percentage point higher than the corresponding annual rate of 5,8% at April 2007. From April 2007 to May 2007 the core index for the historical metropolitan and other urban areas index increased by 0,7%.

The annual increase of 6,0% in the core index for the historical metropolitan and other urban areas was mainly due to annual contributions in the price indices for transport (+ 1,6 percentage points), food (+ 1,2 percentage points), housing (+ 0,7 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), fuel and power (+ 0,4 of a percentage point), education (+ 0,4 of a percentage point), cigarettes, cigars and tobacco (+ 0,3 of a percentage point), household operation (+ 0,3 of a percentage point) and personal care (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (see table 3.19, p.22).

From April 2007 to May 2007 the core index for the historical metropolitan and other urban areas increased by 0,7%. This monthly increase was due to monthly contributions in the price indices for transport (+ 0,4 of a percentage point, mainly due to a 34c/l increase in the price of petrol), food (+ 0,2 of a percentage point) and housing (+ 0,1 of a percentage point) (see table 3.20, p.22).

3. Rural areas

The core inflation rate for the rural areas was 6,7% at May 2007 (i.e. the core index at May 2007 compared with that at May 2006). This rate was 0,5 of a percentage point higher than the corresponding annual rate of 6,2% at April 2007. From April 2007 to May 2007 the core index for the rural areas increased by 1,0%.

The annual increase of 6,7% in the core index for the rural areas was mainly due to annual contributions in the price indices for food (+ 3,4 percentage points), transport (+1,0 percentage point), household operation (+ 0,6 of a percentage point), personal care (+ 0,5 of a percentage point), medical care and health expenses (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,3 of a percentage point) (see table 3.21, p.23).

From April 2007 to May 2007 the core index for the rural areas increased by 1,0%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,6 of a percentage point), transport (+ 0,3 of a percentage point, mainly due to a 34c/l increase in the price of petrol) and housing (+ 0,1 of a percentage point) (see table 3.22, p.23).

4. Total country

The core inflation rate for the total country was 6,0% at May 2007 (i.e. the core index at May 2007 compared with that at May 2006). This rate was 0,1 of a percentage point higher than the corresponding rate of 5,9% at April 2007. From April 2007 to May 2007 the core index for the total country increased by 0,8%.

The annual increase of 6,0% in the core index for the total country was mainly due to annual contributions in the price indices for food (+ 1,7 percentage points), transport (+ 1,7 percentage points), medical care and health expenses (+ 0,7 of a percentage point), housing (+ 0,5 of a percentage point), education (+ 0,4 of a percentage point), personal care (+ 0,4 of a percentage point), household operation (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point) and cigarettes, cigars and tobacco (+ 0,2 of a percentage point). These increases were slightly counteracted by a decrease in the price index for clothing and footwear (- 0,3 of a percentage point) (see table 3.23, p.23).

From April 2007 to May 2007 the core index for the total country increased by 0,8%. This monthly increase was due to monthly contributions in the price indices for transport (+ 0,4 of a percentage point, mainly due to a 34c/l increase in the price of petrol), food (+ 0,3 of a percentage point) and housing (+ 0,1 of a percentage point) (see table 3.24, p.23).

D. Other indices

1. Area indices

The rural areas of Free State and KwaZulu-Natal recorded the highest annual inflation rate at 8,8%, while the lowest annual inflation rate of 5,6% was recorded for the East London and the Free State Goldfields areas (see table 7.1, p.36).

Regarding food prices, the highest annual inflation rate of 13,5% was recorded for the North West province, while the lowest annual inflation rate of 7,5% was recorded for other urban areas of KwaZulu-Natal (see table 7.2, p.37).

2. Pensioners

The rural areas of KwaZulu-Natal recorded the highest annual rate of increase of 9,8%, while the lowest annual rate of change of 5,5% was recorded for the East London area and Pretoria/Centurion/Akasia area (see table 7.5, p.40).

3. Administered prices

The CPI for administered prices at May 2007 (i.e. the CPI for administered prices for the historical metropolitan areas at May 2007 compared with that at May 2006) was 8,5%. This rate was 0,5 of a percentage point lower than the corresponding annual rate of 9,0% at April 2007. The annual increase of 8,5% at May 2007 was mainly due to annual contributions in the price indices for petrol (+ 4,8 percentage points), school fees (+ 1,2 percentage points), electricity (+ 1,1 percentage points), water tariffs (+ 0,6 of a percentage point), assessment rates (+ 0,5 of a percentage point) and tertiary fees (+ 0,5 of a percentage point). These increases were slightly counteracted by a decrease in the price index for telephone call rates (- 0,1 of a percentage point).

The CPIX for administered prices at May 2007 (i.e. the CPIX for administered prices for the historical metropolitan and other urban areas at May 2007 compared with that at May 2006) was 7,9%. This rate was 0,4 of a percentage point lower than the corresponding annual rate of 8,3% at April 2007. The annual increase of 7,9% at May 2007 was mainly due to annual contributions in the price indices for petrol (+ 4,0 percentage points), school fees (+ 1,1 percentage points), electricity (+ 1,1 percentage points), water tariffs (+ 0,7 of a percentage point), assessment rates (+ 0,6 of a percentage point) and tertiary fees (+ 0,5 of a percentage point). These increases were slightly counteracted by a decrease in the price index for telephone call rates (- 0,1 of a percentage point).

4. An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index for the historical metropolitan areas is to annualise the percentage change between the average index of the three months up to May 2007 and the average index of the previous three months. This approach, when using unadjusted data, shows an increase of 8,8% (which is 2,3 percentage points higher than the corresponding rate of 6,5% for April 2007).

An alternative expression of the change in the Consumer Price Index for the historical metropolitan and other urban areas is to annualise the percentage change between the average index of the three months up to May 2007 and the average index of the previous three months. This approach, when using the unadjusted data, shows an increase of 8,4% (which is 2,0 percentage points higher than the corresponding rate of 6,4% for April 2007).

TABLES

Table 1.1 – Expenditure group and area indices of the Consumer Price Index and percentage change for the historical metropolitan areas

Product/expenditure group		Index (2000=100)			Percentage change between	
		May 2006	Apr 2007	May 2007	Apr 2007 and May 2007	May 2006 and May 2007
Expenditure group	Very low	141,0	151,0	152,0	+0,7	+7,8
	Low	140,5	149,9	150,9	+0,7	+7,4
	Middle	137,2	145,9	146,8	+0,6	+7,0
	High	138,2	146,5	147,4	+0,6	+6,7
	Very high	130,4	138,7	139,5	+0,6	+7,0
All expenditure groups		132,6	141,0	141,8	+0,6	+6,9
CPI excluding interest rates on mortgage bonds (CPIX)		140,7	148,4	149,3	+0,6	+6,1
Core index		138,7	145,9	147,0	+0,8	+6,0
Food index		146,3	157,7	159,1	+0,9	+8,7
CPI excluding food		129,3	136,9	137,7	+0,6	+6,5
CPI for administered prices		149,7	159,7	162,4	+1,7	+8,5
CPI for regulated prices		142,5	152,1	155,9	+2,5	+9,4
CPI for administered prices that are not regulated		166,8	177,6	177,6	0,0	+6,5
CPIX for administered prices		149,6	159,5	162,2	+1,7	+8,4
CPIX for regulated prices		142,4	152,0	155,8	+2,5	+9,4
CPIX for administered prices that are not regulated		166,7	177,5	177,5	0,0	+6,5
CPI excluding VAT [1]		132,6	141,0	141,8	+0,6	+6,9

[1] On theoretical grounds and due to rounding off, these rates of change can differ.

Table 1.2 – Expenditure group and area indices of the Consumer Price Index and percentage change for the historical metropolitan and other urban areas

Product/expenditure group		Index (2000=100)			Percentage change between	
		May 2006	Apr 2007	May 2007	Apr 2007 and May 2007	May 2006 and May 2007
Expenditure group	Very low	141,0	151,3	152,5	+0,8	+8,2

EXPLANATORY NOTES

- | | | |
|---|----------|--|
| Survey of Consumer (Retail) prices | 1 | This publication contains results of the monthly Survey of Consumer (Retail) Prices. The results of the survey are used to compile the Consumer Price Index (CPI), an economic indicator. |
| CPI | 2 | The CPI is a general measure of price change of consumer goods and services bought by typical households in SA. The CPI is a measure of pure price change; hence it excludes the effect of changes in quality or quantity of goods and services. The objective is to measure price change of an identical basket of goods and services each month. The CPI measures changes in transaction prices, i.e. prices actually paid when purchasing goods or services. |
| Uses and users of the CPI | 3 | The South African Reserve Bank (SARB) and the Department of Finance use the CPI when formulating monetary and fiscal policy. The National Accounts component of Statistics South Africa (Stats SA) uses the CPI when calculating the Gross Domestic Product (GDP). Furthermore, the CPI is used as a general measure of inflation; to make adjustments to pensions paid and for the adjustment of taxes, fines or fees levied by government; to adjust prices, wages and salaries in contracts; to revalue fixed assets and stocks for accounting purposes; to remove price changes on measures of the economy such as the GDP and estimates of consumption expenditure and to remove the effect of price changes in retail sales to compile a volume measure of retail sales. |
| Survey of Income and Expenditure of Households (IES) | 4 | <p>Stats SA conducts a Survey of Income and Expenditure of Households (IES) every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain information on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa.</p> <p>The results of the IES conducted in 2000 are used in the current CPI. The 2000 IES covered a sample of 30 000 households. The information obtained through this survey was weighted according to the 1996 Population Census figures in order to represent all households in South Africa.</p> |
| CPI basket | 5 | <p>Every five years the results of the IES are used to identify the goods and services bought by a typical consumer. These results are used to construct the CPI basket. To be selected, a product should constitute a large quantity, at least 0,01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product throughout the whole year. The price changes of the goods and services included in the basket are monitored.</p> <p>The 2000 IES collected information regarding approximately 1 000 different goods and services groups. Stats SA made a further breakdown of these groups using supplementary sources. The current CPI basket obtains approximately 1 200 goods and services.</p> |

ITC Classification	6	<p>The CPI basket is classified according to the International Trade Classification (ITC) (refer to tables 1.1 to 5.4, and 7.1 to 7.4). The ITC Classification consists of the following 17 main groups:</p> <ul style="list-style-type: none"> • Food. • Non-alcoholic beverages. • Alcoholic beverages. • Cigarettes, cigars and tobacco. • Clothing and Footwear. • Housing. • Fuel and power. • Furniture and equipment. • Household operation. • Medical care and health expenses. • Transport. • Communication. • Recreation and entertainment. • Reading matter. • Education. • Personal care. • Other.
COICOP Classification	7	<p>The CPI basket is also classified according to the Classification of Individual Consumption by Purpose (COICOP) (refer to tables 6.1 to 6.4). The COICOP Classification consists of the following 9 main groups:</p> <ul style="list-style-type: none"> • Food, beverages and tobacco. • Clothing and footwear. • Housing, water electricity, gas and other fuels. • Furnishings, household equipment and routine maintenance of the house. • Health. • Transport. • Leisure, entertainment and culture. • Education. • Miscellaneous goods and services.
CPI weights	8	<p>Every five years the results of the IES are used to determine the weights of the products/product groups in the basket. The weights of a specific product/product group is calculated by dividing the total amount spent by all households in South Africa on the specific product/product group by the total amount spent on all goods and services by all households.</p> <p>Stats SA implemented the weights from the 2000 IES as from the January 2002 CPI publication.</p>
Fixed weighting basis	9	<p>The CPI is a fixed weights index, which implies that the weight of each product/product group remains constant for the five year period until the results of the next IES become available.</p>
Expenditure groups	10	<p>Five expenditure group categories or quintiles are defined according to total annual expenditure per household, based on the IES results. The five expenditure group categories from the 2000 IES are as follows:</p> <ul style="list-style-type: none"> • Very low expenditure group – up to R8 070. • Low expenditure group – R8 071 up to R12 263. • Middle expenditure group – R12 264 up to R24 365. • High expenditure group – R24 366 up to R55 159. • Very high expenditure group – R55 160 and more.

Coverage	11	<p>Prices on the goods and services included in the CPI basket are collected from the sample of retail trade and service outlets. The 12 historical metropolitan areas and 28 "Other urban areas" are covered. The 12 metropolitan areas were selected, based on the population figures as well as the size of the economical activity in these areas. Metropolitan areas are as follows:</p> <ul style="list-style-type: none">• Cape Peninsula.• Port Elizabeth/Uitenhage.• East London.• Kimberley.• Bloemfontein.• Free State Goldfields.• Durban/Pinetown.• Pietermaritzburg.• Pretoria/Centurion/Akasia .• Witwatersrand.• Nelspruit/Witbank.• Polokwane (Pietersburg).
Collection methodology	12	<p>Prices of goods are collected by enumerators visiting retail outlets and observing the goods and recording the prices. This collection methodology is in-line with international best practice. Administered prices are collected from suitable sources, mainly by means of telephonic surveys and mailing questionnaires to respondents.</p>
Collection frequency	13	<p>Prices of goods and services are collected during the first three weeks of the month. The majority of these prices are collected monthly. The prices of some items are collected quarterly, six monthly or annually. The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices could change, these prices will be collected, even if it is not according to the normal collection schedule.</p>

Prices collected monthly

14 Prices of goods and services collected monthly:

- Bread.
- Meat.
- Milk.
- Vegetables and fruit.
- Other groceries.
- Alcoholic beverages.
- Sweets, non-alcoholic beverages, ice-cream and tobacco products.
- Clothing and footwear.
- Repairs of clothing, footwear and furniture.
- Interest rates on mortgage bonds.
- Coal and wood.
- New vehicles, repairs and services.
- Motor spare parts and accessories.
- Petrol.
- Newspapers and magazines.
- Entrance fees – drive inns and bioscopes.
- Air transport fees.
- Cellular phone tariffs.
- Furniture and equipment.
- Medicine.
- Garden tools.
- Washing ironing and dry-cleaning.
- Sport equipment.
- Reading matter and stationery.
- Tariffs of hairdressing services.
- Ironware and crockery.
- New and retread tyres.
- Household textiles.
- Electrical appliances and equipment.
- Medical, toilet and photographic requisites and services.
- Musical instruments.
- Prices of pets.

Prices collected quarterly

15 Prices of goods and services collected quarterly:

Good/service	Survey month
Rent of dwellings.	January, April, July and October.
Motor vehicle insurance.	March, June, September and December.
Public transport tariffs.	March, June, September and December.

Prices collected annually

16 Prices of goods and services collected annually:

Good/service	Survey month
Doctor's and dentist's fees. Motor vehicle license and registration fees. Telephone (land lines).	January.
Toll-fees at toll-gates. School funds. University boarding and class fees.	March.
Parking fees. Postal tariffs.	April.
Property taxes. Refuse removal. Sanitary fees.	July.
Maintenance of graves.	October.

Prices collected at other times of the year

17 Prices of goods/services collected at other times of the year:

Good/service	Survey month
Contribution to medical aid.	January.
Property insurance. Hospital fees.	January and July.
Water. Electricity.	January, July and August.
Domestic workers.	February and September.
Television licenses.	April and October.

Survey methodology and design

18 Three sampling phases occur. Firstly, a sample of goods and services, based on the information collected through the IES is designed and selected. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large quantity, at least 0, 01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product throughout the whole year.

Secondly, a geographical sample for price collection is designed and selected. Currently 12 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The “other urban areas” are covered by nine provincial samples of two to three other urban areas each, depending on the population size of the area. Therefore a total of 28 other urban areas” are sampled.

Thirdly, for each of the 40 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources. The main sources are the Business Register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from department stores, as well as specialist shops.

Currently, an average of 105 000 price quotations are collected each month from approximately 2 100 outlets.

Pricing basis

19 The prices of all items include VAT.

Processing of price information

20 The prices obtained are quality assured to ensure comparability with the information received in the previous month. The current price levels of prices changes between consecutive months that fall outside specified boundaries are confirmed.

Calculating product price indices

21 Price relatives are calculated for each product per respondent by dividing the current price by the price obtained in the previous period. The geometric mean of the price relatives for each respondent is calculated. This price relative for each product is then multiplied with the product index for the previous month in order to obtain a product index for the relevant month.

Calculating group price indices

22 Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using a modified Laspeyres formula. This formula is arithmetically equivalent to the standard Laspeyres formula but is considered more versatile, since the chaining process used allows for the introduction of replacement varieties as the need arises.

Contributions of specific items to the total CPI

23 The monthly (annual) contribution of a product or product group to the total CPI is calculated by multiplying the weight of the product or product group with the monthly (annual) change in the index for the product or product group and dividing by the index for ‘All items’.

CPI excluding interest rates on mortgage bonds (CPIX)	24	The CPIX is the CPI excluding interest rates on mortgage bonds. The SARB uses this index for inflation targeting purposes. These figures have been published since February 2000.
Administered prices	25	<p>An administered price can be defined as the price of a product or service, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies without reference to market forces. The following administered prices are included in the CPI basket:</p> <ul style="list-style-type: none"> • Housing (sanitary fees, refuse removal, assessment rates, water and university boarding fees). • Fuel and power (electricity and paraffin). • Medical care (public hospital). • Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls). • Education (school fees and university/technicons/colleges). • Transport (petrol, public transport – municipal buses and trains, motor licenses and registration). • Recreation and entertainment (television licence).
CPI for regulated prices	26	<p>Regulated prices are those administered prices that are monitored or controlled by government policy. Price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective. The basket of administered prices that are regulated are:</p> <ul style="list-style-type: none"> • Housing (water). • Fuel and power (electricity and paraffin). • Medical care (public hospital). • Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls). • Transport (petrol).
Rebasing the CPI from 1995=100 to 2000=100	27	Following international practice, the base year of the Consumer Price Index (CPI) has been changed from 1995=100 to 2000=100 with effect from February 2002.
Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF)	28	<p>South Africa's data dissemination practices are assessed against the IMF's Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF's Dissemination Standards Bulletin Board on the internet at http://dsbb.imf.org. This is an international best practice standard. It covers the real, fiscal, financial and external sectors of the economy. It covers the following dimensions of data dissemination: data, access, integrity and quality. For each of these dimensions, the SDDS prescribes two to four monitorable elements or good practices that can be observed, or monitored, by users of statistics.</p>

Reports on Observance of Standards and Codes (ROSC) of the International Monetary Fund (IMF)	29	<p>The IMF has been working actively on producing Reports on Observance of Standards and Codes (ROSC) as a step to strengthen the architecture of the international financial system. The objectives of the ROSC include the promotion of increased transparency and encouragement of implementation of internationally accepted standards and codes. One of the ROSC components is the data dissemination module, which falls under the responsibility of the IMF's Statistics Department (STA). In this module, a country is assessed according to the SDDS.</p> <p>The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for these categories. It is complemented by an assessment of the quality of the CPI, using the Data Quality Assessment Framework (DQAF) developed by the IMF's Statistics Department. The DQAF undertakes to assess data quality under the following dimensions:</p> <ul style="list-style-type: none"> • Prerequisites of quality. • Integrity. • Methodological soundness. • Accuracy and reliability. • Serviceability. • Accessibility. 										
Reliability of estimates	30	<p>Inaccuracies may occur because of imperfections in reporting by enumerators and respondents. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, quality assurance procedures and efficient operating procedures.</p>										
Related publications	31	<p>Users may also wish to refer to the following Stats SA publications:</p> <ul style="list-style-type: none"> • Bulletin of Statistics. • SA Statistics. 										
Unpublished statistics	32	<p>In some cases, Stats SA can also make available information, which is not published. This information can be made available in one or more of the following ways: computer printout, diskette or CD. Generally a fee is levied for providing unpublished information.</p>

GLOSSARY

Annual inflation rate	The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.
Annual percentage change	The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.
Average annual inflation rate	The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.
Average annual percentage change	The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.
CPI excluding interest rates on mortgage bonds (CPIX)	The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services.
CPI for administered prices	An administered price is defined as the price of a product, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies/institutions without reference to market forces.
CPI for regulated prices	Regulated prices are those administered prices that are said to be monitored and controlled by government policy. To this end, price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective.
Core index	<p>The core index is derived by exclusions from the CPI on the basis that changes in their prices are policy. Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows:</p> <ul style="list-style-type: none"> • Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought. • Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions. • Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate. • Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy). • Assessment rates: These taxes are predominantly determined by local government.
Core inflation	The core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.
Indicator products	Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.
Inflation rate	Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Monthly percentage change	The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.
Weights	The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.

FOR MORE INFORMATION

Stats SA publishes approximately 300 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Advance release calendar

An advance release calendar is disseminated on <http://www.statssa.gov.za>

Forthcoming issues

Issue	Expected date for publication
June 2007	25 July 2007
July 2007	29 August 2007
August 2007	26 September 2007
September 2007	24 October 2007
October 2007	28 November 2007
November 2007	19 December 2007

Stats SA products

A complete set of Stats SA publications is available in the Stats SA Library and the following libraries -
