Consumer Price Index (CPI) April 2000

THE LICRARY
STATISTICS SOUTH AFRICA
PRIVATE RAG X44
COO1 PRETORIA

Co-operation between Statistics South Africa (Stats SA), the citizens of the country, the private sector and government institutions is essential for a successful statistical system. Without continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

Stats SA publishes approximately three hundred different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally, but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Embargo: 11:30 Date: 16 May 2000

INFLATION RATE INCREASES TO 4,5% AT APRIL 2000

The official inflation rate, i.e. the annual rate of change in the Consumer Price Index for metropolitan areas, is 4,5% at April 2000. This rate is 1,1 percentage points higher than the corresponding annual rate of 3,4% at March 2000. From March 2000 to April 2000 the Consumer Price Index for metropolitan increased by 1,3%, while the seasonally adjusted index increased by 1,1%.

The annual increase of 4,5% in the Consumer Price Index for metropolitan areas is mainly due to annual increases in the price indices for transport (+1,8 percentage points, mainly due to a 35,4% increase in the petrol price from April 1999 to April 2000), food (+1,5 percentage points), household operation (+0,7 of a percentage point) and medical care and health expenses (+0,7 of a percentage point). These increases were partially counteracted by a relatively large annual decrease in the price index for housing (-1,6 percentage points, mainly due to a drop in the interest rates on mortgage bonds from 20,0% at April 1999 to 14,5% at April 2000) (cf. table 3).

The inflation rate for metropolitan and other urban areas is 4,4% at April 2000. This rate is 0,9 of a percentage point higher than the corresponding annual rate of 3,5% at March 2000. From March 2000 to April 2000 the Consumer Price Index for metropolitan and other urban areas as well as the seasonally adjusted index increased by 1,2%. The annual increase of 4,4% in the Consumer Price Index for metropolitan and other urban areas is mainly due to annual increases in the price indices for food (+1,5 percentage points), transport (+1,4 percentage points, mainly due to a 29,4% increase in the petrol price from April 1999 to April 2000), household operation (+0,8 of a percentage point) and medical care and health expenses (+0,6 of a percentage point). These increases were partially counteracted by a relatively large annual decrease in the price index for housing (-1,4 percentage points, mainly due to a drop in the interest rates on mortgage bonds from 20,0% at April 1999 to 14,5% at April 2000) (cf. table 5).

TABLE A - Consumer Price Index (CPI) and the inflation rate for the metropolitan areas according to main indices

Main		Indices (1995=100))	Percentage change between			
Indices	Apr	Mar	Apr		Mar 2000 and Apr 2000		
	1999	2000	2000	Actual %	Seasonally Adjusted %	Actual %	
CPI	130,7	134,8	136,6	+1,3	+1,1	+4,5	
Food price index	128,0	137,4	138,7	+0,9	+1,1	+8,4	
CPI excluding food price index	131,3	· 134,2	136,1	+1,4	+1,3	+3,7	
CPI excluding Value Added Tax (VAT)	130,7	134,8	136,6	+1,3	+1,1	+4,5	
Core index	133,3	142,6	144,7	+1,5	+0,8	+8,6	
CPI excluding interest rates on mortgage bonds (CPIX)	134,0	143,5	145,5	+1,4	+1,0	+8,6	

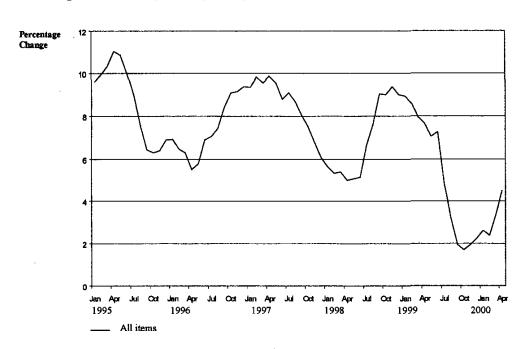

CORE INFLATION RATE

The core inflation rate for metropolitan areas (cf. explanatory notes 33, 34 and 35 on page 28) is 8,6% at April 2000. This rate is 0,5 of a percentage point higher than the corresponding annual rate of 8,1% at March 2000. From March 2000 to April 2000 the core index for metropolitan areas increased by 1,5% and the seasonally adjusted index by 0,8%. The annual increases of 8,6% in the core index for metropolitan areas is mainly due to annual increases in the price indices for transport (+2,4 percentage points, mainly due to a 35,4% increase in the petrol price from April 1999 to April 2000), housing (+1,8 percentage points, due to increases in all components in certain areas), household operation (+0,9 of a percentage point), medical care and health expenses (+0,9 of a percentage point), food (+0,6 of a percentage point) and education (+0,4 of a percentage point) (cf. table 11).

The core inflation rate for metropolitan and other urban areas (cf. explanatory notes 33, 34 and 35 on page 28) is 7,8% at April 2000, which is 0,4 of a percentage point higher than the corresponding annual rate of 7,4% at March 2000. From March 2000 to April 2000 the core index for metropolitan and other urban areas increased by 1,3% and the seasonally adjusted index by 0,8%. The annual increase of 7,8% in the core index for metropolitan and other urban areas is mainly due to annual increases in the price indices for transport (+1,8 percentage points, mainly due to a 29,4% increase in the petrol price from April 1999 to April 2000), housing (+1,2 percentage points, due to increases in all components in certain areas), household operation (+1,1 of a percentage point), medical care and health expenses (+0,7 of a percentage point) and food (+0,7 of a percentage point) (cf. table 13).

2

Figure 1 - Annual percentage change in the Consumer Price Index: metropolitan areas

Source: Stats SA

CONSUMER PRICE INDEX EXCLUDING INTEREST RATES ON MORTGAGE BONDS (CPIX)

The annual percentage change in the CPIX for the metropolitan areas is 8,6% at April 2000. This rate is 0,6 of a percentage point higher than the corresponding rate of 8,0% at March 2000. From March 2000 to April 2000 the CPIX for metropolitan areas increased by 1,4% and the seasonally adjusted index increased by 1,0%. The annual increase of 8,6% in the CPIX for metropolitan areas is mainly due to annual increases in the price indices for transport (+2,0 percentage points, mainly due to a 35,4% increase in the petrol price from April 1999 to April 2000), food (+1,7 percentage points), housing (+1,6 percentage points, due to increases in all components in certain areas), household operation (+0,8 of a percentage point), medical care and health expenses (+0,7 of a percentage point) and education (+0,4 of a percentage point) (cf. table 7).

The annual percentage change in the CPIX for the metropolitan and other urban areas is 7,8% at April 2000. This rate is 0,4 of a percentage point higher than the corresponding rate of 7,4% at March 2000. From March 2000 to April 2000 the CPIX for metropolitan and other urban areas increased by 1,2% and the seasonally adjusted index increased by 0,7%. The annual increase of 7,8% in the CPIX for metropolitan and other urban areas is mainly due to annual increases in the price indices for transport (+1,6 percentage points, mainly due to a 29,4% increase in the petrol price from April 1999 to April 2000), food (+1,6 percentage points), housing (+1,3 percentage points, due to increases in all components in certain areas), household operation (+0,8 of a percentage point) and medical care and health expenses (+0,7 of a percentage point) (cf. table 9).

METROPOLITAN AREAS

Contributions to monthly increase in the CPI

The Consumer Price Index for metropolitan areas increased by 1,3% from March 2000 to April 2000. This monthly increase is due to monthly increases in the price indices for transport (+0,5 of a percentage point, mainly due to a 27c/l increase in the price of petrol), medical care and health expenses (+0,3 of a percentage point, mainly due to increases in medical aid contributions), food (+0,2 of a percentage point), housing (+0,1 of a percentage point), personal care (+0,1 of a percentage point) and household operation (+0,1 of a percentage point) (cf. table 4).

Contributions to monthly increase in core index

From March 2000 to April 2000 the core index for metropolitan areas increased by 1,5%. This monthly increase is due to monthly increases in the price indices for transport (+0,7 of a percentage point, mainly due to a 27c/l increase in the price of petrol), medical care and health expenses (+0,4 of a percentage point, mainly due to increases in medical aid contributions), housing (+0,1 of a percentage point), household operation (+0,1 of a percentage point), personal care (+0,1 of a percentage point) and clothing and footwear (0,1 of a percentage point) (cf. table 12).

3

Food inflation

The price index for food reflects an annual rate of increase of 8,4% at April 2000. This rate is 1,1 percentage points higher than the corresponding annual rate of 7,3% at March 2000. From March 2000 to April 2000 this index increased by 0,9%. The seasonally adjusted index increased by 1,1% for the same period.

Relatively large monthly increases occurred in the price indices for vegetables (+6,3%), milk, cheese and eggs (+1,6%), fats and oils (+0,8%), "other" food products (+0,6%), sugar (+0,2%), meat (+0,2%) and grain products (+0,1%). These monthly increases were partially counteracted by monthly decreases in the price indices for fish and other seafood (-2,1%), fruit and nuts (-0,7%) and coffee, tea and cocoa (-0,5%).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 3,7% at April 2000. This rate is 1,2 percentage points higher than the corresponding annual rate of 2,5% at March 2000. From March 2000 to April 2000 this index increased by 1,4%, while the seasonally adjusted index increased by 1,3%.

Relatively large monthly increases occurred in the price indices for medical care and health expenses (+4,4%, mainly due to increases in the medical aid contributions), transport (+3,2%, mainly due to a 27c/l increase in the price of petrol), personal care (+1,6%), cigarettes, cigars and tobacco (+1,3%), household operation (+1,3%) and reading matter (+1,0%).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to April 2000 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 7,2% (which is 0,6 of a percentage point higher than the corresponding rate of 6,6% for March 2000), while the unadjusted data shows an increase of 7,0% (which is 0,6 of a percentage point higher than the corresponding rate of 6,4% for March 2000).

Pensioners

The annual inflation rate for pensioners in the metropolitan areas is 6,0% at April 2000, which is 0,7 of a percentage point higher than the corresponding rate of 5,3% at March 2000.

METROPOLITAN AND OTHER URBAN AREAS

Contributions to monthly change in the CPI

The Consumer Price Index for metropolitan and other urban areas increased by 1,2% from March 2000 to April 2000. This monthly increase is due to monthly increases in the price indices for transport (+0,4 of a percentage point, mainly due to a 27c/l increase in the price of petrol), medical care and health expenses (+0,3 of a percentage point, mainly due to increases in medical aid contributions), food (+0,2 of a percentage point), housing (+0,1 of a percentage point), personal care (+0,1 of a percentage point) and household operation (+0,1 of a percentage point) (cf. table 6).

Food inflation

The price index for food reflects an annual rate of increase of 7,5% at April 2000. This rate is 0,5 of a percentage point higher than the corresponding annual rate of 7,0% at March 2000. From March 2000 to April 2000 this index as well as the seasonally adjusted index increased by 0,8%.

The monthly increase of 0,8% in the price index for food is due to monthly increases in the price indices for vegetables (+6,4%), milk, cheese and eggs (+1,5%), "other" food products (+0,8%), sugar (+0,3%) and meat (+0,2%). These increases were partially counteracted by monthly decreases in the price indices for fruit and nuts (-1,6%), fish and other seafood (-1,2%), fats and oils (-0,6%) and coffee, tea and cocoa (-0,3%).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 3,6% at April 2000. This rate is 1,0 percentage point higher than the corresponding annual rate of 2,6% at March 2000. From March 2000 to April 2000 this index increased by 1,3%, while the seasonally adjusted index increased by 1,2% for the same period.

Relatively large monthly increases occurred in the price indices for medical care and health expenses (+4,3%, mainly due to increases in the medical aid contributions), transport (+2,8%, mainly due to a 27c/l increase in the price of petrol), clothing and footwear (+1,1%), household operation (+1,1%), cigarettes, cigars and tobacco (+1,0%), reading matter (+1,0%) and personal care (+0,9%).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to April 2000 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 8,4% (which is 1,0 percentage point higher than the corresponding rate of 7,4% for March 2000), while the unadjusted data shows an increase of 6,8%, which is 0,5 of a percentage point higher than corresponding rate of 6,3% for March 2000.

Areas indices

The Free State Goldfields and the other urban areas of the Northern Province recorded the highest annual inflation rate of 5,4%, while the lowest annual inflation rate of 2,1% was recorded for the Pietersburg area.

Regarding food prices, the highest annual increase of 9,6% was recorded for the Pietersburg area, while the other urban areas in Northern Cape reflected the lowest annual increase of 4,0%.

Pensioners

The annual inflation rate for pensioners in the metropolitan and other urban areas is 5,8% at April 2000. The other urban areas in Mpumalanga recorded the highest rate of increase of 7,5%, while the lowest rate of increase of 3,7% was recorded for Bloemfontein.

CPI FOR MAY 2000

In addition to the usual price surveys for May 2000, it has come to the attention of Stats SA that changed prices will apply during the first seven days of May 2000 regarding provincial hospital tariffs, parking fees, property insurance and motor vehicle licences in certain areas.

Purpose of the survey

The Survey of Consumer Prices is a monthly survey covering a sample of retailers operating in the South African economy. The results of the survey are used to compile the Consumer Price Index (CPI), an economic indicator, which indicates the changes in the prices of consumer goods and services. The annual percentage change in the Consumer Price Index indicates the inflation rate. These statistics are used by the private sector in analysis of comparative business performance, as well as for contract price adjustments. It is also used in the determination of economic and social policy.

Recent changes

In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds, CPIX, is included in this release (cf. table 1 on page 9).

The indices published in this statistical release are classified according to the International Trade Classification (as indicated in tables 1, 3 to 14, 15, 16, 17, 18, 25 and 26) and geographical areas (as indicated in tables 21 to 24 and 27). Due to a new international classification system, the Classification of Individual Consumption by Purpose (COICOP), prescribed by the 1993 System of National Accounts (SNA revision IV, 1993) compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, Stats SA decided to introduce this alongside the classification methods used up to this stage. The information contained in tables 19 and 20 is classified according to COICOP, while all others are still classified according to ITC:

Detailed figures on the CPIX are released as from the Statistical Release for February 2000 (cf. tables 17 and 18 on pages 15 and 16).

Changes in the numbering of tables

It should be noted that the numbering of tables has changed as from the Statistical Release for March 2000 as indicated in table B.

EXPLANATORY NOTES

1

Introduction

This publication contains results of the monthly Survey of Consumer (Retail) Prices. The purpose of the survey is to collect and provide information regarding changes in the overall level of prices of all goods and services bought by the average household.

- The indices are classified according to the International Trade Classification (as indicated in tables 1, 3 to 18, 25 and 26) and geographical areas (as indicated in tables 21 to 24 and 27). Due to a new international classification system, prescribed by the 1993 System of National Accounts (SNA revision IV, 1993), compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, the Classification of Individual Consumption by Purpose (COICOP), Stats SA decided to classify the price information collected according to this new classification system, alongside the existing classification system. The information contained in tables 19 and 20 is classified according to COICOP. The indices are calculated on the base 1995=100.
- The Consumer Price Index (CPI) is a series of figures (numbers) showing how the average price level of all those goods and services (basket of goods and services) bought by a typical consumer or household changes over time. The inflation rate is the annual percentage change in the CPI.

Survey of Income and Expenditure of Households

- Stats SA conducts a Survey of Income and Expenditure of Households every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain details on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa.
- The results from this survey is used to identify the goods and services bought by a typical consumer or household, which should be included in the CPI basket in order to monitor price changes.
- Furthermore the results of this survey is used to determine the weights of the products/groups (indicator products) in the basket. The weights of a specific product/group is calculated by dividing the total amount spent by all households in South Africa on the specific product/group by the total amount spent on all goods and services by all households.

1995 Survey of Income and Expenditure of Households

7

- The last Survey of Income and Expenditure of Households was conducted by Stats SA in October 1995 covering a sample of 30 000 households. The information obtained through this survey was weighted according to the 1991 Population Census figures in order to represent all households in South Africa.
- Information regarding approximately 1 000 different goods and services groups was collected through this survey. Stats SA made a further breakdown of these groups, using supplementary sources. This process lead to a list of approximately 1 500 groups on which the calculation of the CPI is based.
- The weights of a specific product/group was calculated by dividing total expenditure by all households on the specific product/group by total expenditure on all goods and services by all households. The weights are revised every five years according to the latest Survey of Income and Expenditure of Households. Currently the 1995 weights are used to calculate the CPI.

Basket of goods 10 and services

The current CPI basket covers approximately 1 500 goods and services.

- These goods and services are grouped according to the International Trade Classification into 17 main groups -
 - Food:
 - Non-alcoholic beverages;
 - Alcoholic beverages;
 - Cigarettes, cigars and tobacco;
 - Clothing and Footwear;
 - Housing;
 - Fuel and power,
 - Furniture and equipment;
 - Household operation;
 - · Medical care and health expenses;
 - Transport;
 - Communication;
 - Recreation and entertainment;
 - Reading matter;
 - Education;
 - · Personal care; and
 - Other.
- 12 These goods and services are grouped according to the COICOP classification into 9 main groups
 - Food, beverages and tobacco;
 - Clothing and Footwear;
 - · Housing, water, electricity, gas and other fuels;
 - Furnishings, household equipment and routine maintenance of the house;
 - Health:
 - Transport;
 - Leisure, entertainment and culture;
 - Education; and
 - · Miscellaneous goods and services.

Weighting basis

The CPI is a fixed weights index, which implies that the weight of each product/group stays the same for the five year period until the results of the next Survey of Income and Expenditure of Households become available.

Expenditure groups

14

15

Five expenditure group categories or quintiles are defined according to total annual expenditure per household as in October of the year in which the Survey of Income and Expenditure of Households is conducted. The five expenditure group categories used in this publication were defined according to total annual expenditure per household as in October 1995 as –

- very low expenditure group up to R6 340;
- low expenditure group R6 341 up to R11 590;
- middle expenditure group R11 591 up to R21 909;
- high expenditure group R21 910 up to R49 498; and
- very high expenditure group R49 499 and more.

Scope of the CPI survey

The Survey of Retail Prices is a retail trade and service outlets sample survey covering prices of selected consumer goods and services sold by these retail trade and service outlets to consumers in the 14 metropolitan and 39 other urban areas in the nine provinces. The results of the survey are used to compile the Consumer Price Index, an economic indicator.

Prices of goods and services included in the CPI are collected as at any day between the first and the seventh of the month concerned. Although these prices are generally collected monthly (see list of items in paragraph 17), the prices of some items are collected quarterly (see list of items in paragraph 18), six monthly or annually (see list of items in paragraph 19). The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices are about to change, these prices will be collected, even if it is not according to the normal scheduled time.

17 Prices of items/products collected monthly:

- Bread.
- Meat.
- Milk.
- Vegetables and fruit.
- Other groceries.
- Alcoholic beverages.
- Sweets, non-alcoholic beverages, ice-cream and tobacco products.
- Clothing and footwear.
- Repairs of clothing, footwear and furniture.
- Interest rates on mortgage bonds.
- · Coal and wood.
- · New vehicles, repairs and services.
- Motor spare parts and accessories.
- Petrol.
- Diesel.

Prices of items/products collected quarterly:

Items/products	Months of survey
 Garden tools. Washing, ironing and dry-cleaning. Sport equipment. Reading matter and stationery. Tariffs of hairdressing services. 	January, April, July and October
Ironware and crockery. New and retread tyres.	February, May, August and November
 Furniture and equipment. Household textiles. Electrical appliances and equipment. Medical, toilet and photographic requisites and services. Motor vehicle insurance. 	March, June, September and December

19 Prices of items/products collected annually:

Items/pr	oducts	Mo	onth of survey
	tor's and dentist's fees. or vehicle licence and registration fees.	•	January
• Scho	fees at toll-gates. ool funds. versity boarding and class fees.	• ,	March
	ing fees. phone and postal tariffs.	•	April
• Publ	ic transport tariffs.	•	June
Refu Sani	erty taxes. use removal. tary fees. rspapers and magazines.	•	July
• Entr	ance fees - drive-inns and bioscopes.	•	August
• Mair	vision licences; ntenance of graves; and of dwellings.	•	October

20 Prices of items/products collected at other times of the year -

28

Items/products	Month of survey
Winter clothing.	March, April, May, June, July and August
Medicine.	January and June
Contributions to medical aids.	January, April and July
Property insurance. Hospital fees.	January and July
Water. Electricity.	January, July and August
Air transport fees.	January and August
Dog licences.	January, July and October

Classification

- The International Trade Classification (ITC) was used to classify the products and services contained in the basket of goods and services.
- A further classification of the products and services in the basket of goods and services, in line with international practices, was done according to the Classification of Individual Consumption by Purpose (COICOP). The indices according to this classification are published in tables 9 and 10.

Statistical unit 23

24

The statistical unit is the department (e.g food department, hardware department, clothing department) of the retail trade and service establishments (branches). The establishment is the smallest economic unit that functions as a separate entity. Information is obtained from the different departments in each establishment. Each department in the establishment is classified according to the classification of the products that the department sells, which is then classified according to ITC as well as COICOP.

Survey methodology and design

- Different phases of sampling takes place. Firstly, a sample of goods and services, based on the information collected through the Survey of Income and Expenditure of Households, is designed and drawn. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large share of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- Secondly, a geographical sample for price collection is designed and drawn. Currently all 14 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The "other urban areas" are covered by nine provincial samples of four to five urban areas each, depending on the population size of the area. Therefore, a total of 39 "other urban areas" is sampled.
- Thirdly, for each of the 53 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources, mainly the business register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from supermarkets, as well as specialist shops. The sample of outlets is revised every five years when the weights are revised.
- 27 Currently, an average of 110 000 price quotations are collected each month from approximately 2 200 outlets by means of 6 700 questionnaires. The indices are based on retail trade and service prices.

Pricing basis

Price information refers to the first seven days of the relevant month. The prices of all items include VAT.

Processing of price information

29

30

31

33

The prices that are quoted for the different products/services are edited to ensure that it is comparable with the prices received for the same products in the previous month. If the price difference between successive periods are outside the specified range, the current price levels are confirmed with the relative respondents through a telephone inquiry.

Calculating product price indices

Price relatives are calculated for each product per respondent by dividing the current price by the previous quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then applied to the product index for the previous month in order to obtain a product index for the relevant month.

Calculating group price indices

Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using the Laspeyres index formula.

Contributions 32 of specific items to the total CPI

The monthly (annual) contribution of a specific item or group of items to the total CPI is calculated by multiplying the weight of this item or group of items with the monthly (annual) change in the index for this item or group of items, divided by the index for 'All items'.

Core index

The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, the core index is derived by excluding items from the CPI basket on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.

- Exclusions from from the CPI to obtain the core index, and the reasons for exclusion are as follows
 - Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.
 - Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.
 - Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to
 their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation
 pressures would cause interest rates to rise and be reflected in the interest cost component of
 measured inflation. This, in turn, could provoke a further tightening of monetary policy
 resulting in excessive movements in the inflation rate.
 - Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).
 - Assessment rates: These taxes are predominantly determined by local government.

The choice of exclusions was informed by best practice amongst several other international agencies, and after consultation with the South African Reserve Bank and other local technical experts.

CPI excluding 36 interest rates on mortgage bonds (CPIX)

In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, the Core index excluding petrol and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and only the CPIX and the Core index are included in this release (cf. table 1 on page 9).

Seasonally 37 adjustment

Seasonal fluctuations in a time series are those fluctuations which usually tend to occur at about the same time and with the same magnitude each year. This may be the result of climatic influences or other social and commercial habits (e.g. the price of bread, which was previously revised in October of each year). In the analysis of time series, Stats SA makes use of the X-11 technique, which was developed by the American Bureau of Census. The seasonally adjusted indices for the latest month are calculated with seasonal factors, which are based on a time series analysis of information up to and including the previous month. Therefore, historical seasonally adjusted indices are revised annually in January of each year.

Reliability of estimates

38

39

40

Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.

TECHNICAL NOTES

Response rates 1

The response rate for the CPI for the metropolitan areas for April 2000 was 91%. The response rate for the CPI for the metropolitan and other urban areas for April 2000 was 89%. 2

GLOSSARY

Annual inflation rate

The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Annual percentage change

The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.

Average annual inflation rate

The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.

Average annual percentage change

The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.

CPI exluding interest rates on mortgage bonds (CPIX)

The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services, which is used to compile the Consumer Price Index.

In other countries in the world such as New Zealand, Sweden and Australia, which adopted as inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds CPI(X), is included in this release (cf. table1 on page 9).

Core index

The core index is derived by exclusions from the CPI on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.

Exclusions from from the CPI to obtain the core index, and the reasons for exclusion are as follows -

- Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.
- Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.
- Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to
 their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation
 pressures would cause interest rates to rise and be reflected in the interest cost component of
 measured inflation. This, in turn, could provoke a further tightening of monetary policy
 resulting in excessive movements in the inflation rate.
- Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).
- Assessment rates: These taxes are predominantly determined by local government.

Core inflation

The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.

Establishment

An establishment (branch) is the smallest economic unit that functions as a separate entity.

Indicator products

Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.

Inflation rate

Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Monthly percentage change

The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.

Weights

The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.

FOR MORE INFORMATION

Stats SA publishes approximately 400 different releases each year. It is not economically viable to produce them in more than one of South Afrea's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries -

State Library, Pretoria Library of Parliament, Cape Town South African Library, Cape Town Bloemfontein Public Library Natal society Library, Pietermaritzburg Johannesburg Public Library
