Co-operation between Statistics South Africa (Stats SA), the citizens of the country, the private sector and government institutions is essential for a successful statistical system. Without continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

Embargo: 11:30
Date: 15 May 2001

Stats SA publishes approximately three hundred different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally, but also by international economic and social-scientific communities, Stats SA releases are published in English only.

This data in this statistical release adheres to the Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF), which sets out standards on coverage, periodicity and timeliness of data; access by the public; integrity; and quality of the disseminated data.

15 May 2001

FACT SHEET I

Contribution to the decrease of 0,9 percentage points in the headline inflation rate as at April 2001

Groups	March 2001		April 2001		Difference between March 2001 and April 2001 in annual contribution to inflation rate
	Annual % change (inflation rate)	Contribution (percentage points) to inflation rate	Annual % change (inflation rate)	Contribution (percentage points) to inflation rate	
Medical care and health expenses	+15,3	+0,9	+10,5	+0,7	+0,2
Transport	+10,4	+1,5	+ 8,9	+1,3	+0,2
Food	+ 4,6	+0,9	+ 4,0	+0,7	+0,2
Housing	+ 7,2	+1,8	+ 7,0	+1,7	+0,1
Personal care	+ 6,9	+0,3	+ 5,8	+0,2	+0,1
Household operation	+11,3	+0,6	+10,3	+0,5	+0,1
Total	+ 7,4		+ 6,5		+0,9

The decrease of 0,9 of a percentage point in the inflation rate at April 2001 is due to lower annual contributions of the price indices for medical care and health expenses (+0,2 of a percentage point, as the annual percentage increase of 15,3 at March 2001, contributing 0,9 of a percentage point to the 7,4% inflation rate, dropped to 10,5% at April 2001, contributing 0,7 of a percentage point to the 6,5% inflation rate), transport (+0,2 of a percentage point, as the annual percentage increase of 10,4 at March 2001, contributing 1,5 percentage points to the 7,4% inflation rate, dropped to 8,9% at April 2001, contributing 1,3 percentage points to the 6,5% inflation rate), food (+0,2 of a percentage point, as the annual percentage increase of 4,6% at March 2001, contributing 0,9 of a percentage point to the 7,4% inflation rate, dropped to 4,0% at April 2001, contributing 0,7 of a percentage point to the 6,5% inflation rate), housing (+0,1 of a percentage point, as the annual percentage increase of 7,2% at March 2001, contributing 1,8 percentage points to the 7,4% inflation rate, dropped to 7,0% at April 2001, contributing 1,7 percentage points to the 6,5% inflation rate), personal care (+0,1 of a percentage point, as the annual percentage increase of 6,9% at March 2001, contributing 0,3 of a percentage point to the 7,4% inflation rate, dropped to 5,8% at April 2001, contributing 0,2 of a percentage point to the 6,5% inflation rate) and household operation (+0,1 of a percentage point, as the annual percentage increase of 11,3% at March 2001, contributing 0,6 of a percentage point to the 7,4% inflation rate, dropped to 10,3% at April 2001, contributing 0,5 of a percentage point to the 6,5% inflation rate).

15 May 2001

FACT SHEET II

Contribution to decrease in the annual percentage change in the CPIX for metropolitan and other urban areas as at April 2001

Groups	March 2001		April 2001		Difference between March 2001 and April 2001 in annual contribution to annual rate of change
	Annual % change	Contribution (percentage points) to annual rate of change	Annual % change	Contribution (percentage points) to annual rate of change	
Medical care and health expenses	+16,1	+1,1	+11,3	+0,8	+0,3
Transport	+ 9,6	+1,5	+ 8,2	+1,3	+0,2
Food	+ 4,4	+1,0	+ 3,9	+0,9	+0,1
Housing	+10,7	+1,4	+10,4	+1,3	+0,1
'Other'	+ 1,2	+0,2	+ 1,1	0,1	+0,1
Total	+ 7,5		+ 6,7		+0,8

The decrease of 0,8 of a percentage point in the annual rate of change at April 2001 is due to lower annual contributions of the price indices for medical care and health expenses (+0,3 of a percentage point, as the annual percentage increase of 16,1% at March 2001, contributing 1,1 percentage points to the 7,5% annual rate of change, dropped to 11,3% at April 2001, contributing 0,8 of a percentage point to the 6,7% annual rate of change), transport (+0,2 of a percentage point, as the annual percentage increase of 9,6% at March 2001, contributing 1,5 percentage points to the 7,5% annual rate of change, dropped to 8,2% at April 2001, contributing 1,3 percentage points to the 6,7% annual rate of change), food (+0,1 of a percentage point, as the annual percentage increase of 4,4% at March 2001, contributing 1,0 percentage point to the 7,5% annual rate of change, dropped to 3,9% at April 2001, contributing 0,9 of a percentage point to the 6,7% annual rate of change), housing (+0,1 of a percentage point, as the annual percentage increase of 10,7% at March 2001, contributing 1,4 percentage points to the 7,5% annual rate of change, dropped to 10,4% at April 2001, contributing 1,3 percentage points to the 6,7% annual rate of change) and "other" (+0,1 of a percentage point, as the annual percentage increase of 1,2% at March 2001, contributing 0,2 of a percentage point to the 7,5% annual rate of change, dropped to 1,1% at April 2001, contributing 0,1 of a percentage point to the 6,7% annual rate of change).

EXECUTIVE SUMMARY

	April 2000	March 2001	April 2001	March 2001 and April 2001		April 2000 and April 2001
				Actual %	Seasonally adjusted %	Actual %
CPI (metropolitan areas)	98,9	104,8	105,3	+0,5	+0,4	+6,5
CPI excluding interest rates on mortgage bonds (CPIX) (metropolitan and other urban areas)	98,8	104,9	105,4	+0,5	0,0	+6,7

KEY FINDINGS AT APRIL 2001

Headline inflation rate decreased to 6,5% at April 2001

The official inflation rate, i.e. the annual rate of change in the Consumer Price Index for the metropolitan areas, is 6,5% at April 2001. This rate is 0,9 of a percentage point lower than the corresponding annual rate of 7,4% at March 2001 (cf. table 2.1, p. 12), mainly due to lower annual rates of increase reflected at April 2001 in the price indices for food (+4,0% or with a contribution of 0,7 of a percentage point to the 6,5% official inflation rate), housing (+7,0% or with a contribution of 1,7 percentage points to the 6,5% official inflation rate), transport (+8,9% or with a contribution of 1,3 percentage points to the 6,5% official inflation rate), medical care and health expenses (+10,5% or with a contribution of 0,7 of a percentage point to the 6,5% official inflation rate) and household operation (+10,3% or with a contribution of 0,5 of a percentage point to the 6,5% official inflation rate) (cf. table 3, p. 13), than the annual rates of increase reflected at March 2001 in the price indices for food (+4,6% or with a contribution of 0,9 of a percentage point to the 7,4% official inflation rate), housing (+7,2% or with a contribution of 1,8 percentage points to the 7,4% official inflation rate), transport (+10,4% or with a contribution of 1,5 percentage points to the 7,4% official inflation rate), medical care and health expenses (+15,3% or with a contribution of 0,9 of a percentage point to the 7,4% official inflation rate) and household operation (+11,3% or with a contribution of 0,6 of a percentage point to the 7,4% official inflation rate). From March 2001 to April 2001 the Consumer Price Index for the metropolitan areas increased by 0,5% and the seasonally adjusted index increased by 0,4%.

The annual increase of 6,5% in the Consumer Price Index for the metropolitan areas is mainly due to annual increases in the price indices for housing (+1,7 percentage points, due to increases in all components in certain areas), transport (+1,3 percentage points, mainly due to a 17,1% increase in the petrol price from April 2000 to April 2001), food (+0,7 of a percentage point) and medical care and health expenses (+0,7 of a percentage point) (cf. table 3, p. 13).

Annual percentage change in Consumer Price Index excluding interest rates on mortgage bonds (CPIX) decreased to 6,7% at April 2001

The annual percentage change in the CPIX for the metropolitan and other urban areas is 6,7% at April 2001. This rate is 0,8 of a percentage point lower than the corresponding rate of 7,5% at March 2001 (cf. table 2.2, p. 12). From March 2001 to April 2001 the CPIX for the metropolitan and other urban areas increased by 0,5%, while the seasonally adjusted index remained at the same level.

The annual increase of 6,7% in the CPIX for the metropolitan and other urban areas is mainly due to annual increases in the price indices for transport (+1,3 percentage points, mainly due to a 14,4% increase in the petrol price from April 2000 to April 2001), housing (+1,3 percentage points, due to increases in all components in certain areas), food (+0,9 of a percentage point), medical care and health expenses (+0,8 of a percentage point) and household operation (+0,6 of a percentage point) (cf. table 9, p. 14).

KEY FINDINGS AT APRIL 2001

Headline inflation rate decreased to 6,5% at April 2001

The official inflation rate, i.e. the annual rate of change in the Consumer Price Index for the metropolitan areas, is 6,5% at April 2001. This rate is 0,9 of a percentage point lower than the corresponding annual rate of 7,4% at March 2001 (cf. table 2.1, p. 12), mainly due to lower annual rates of increase reflected at April 2001 in the price indices for food (+4,0% or with a contribution of 0,7 of a percentage point to the 6,5% official inflation rate), housing (+7,0% or with a contribution of 1,7 percentage points to the 6,5% official inflation rate), transport (+8,9% or with a contribution of 1,3 percentage points to the 6,5% official inflation rate), medical care and health expenses (+10,5% or with a contribution of 0,7 of a percentage point to the 6,5% official inflation rate) and household operation (+10,3% or with a contribution of 0,5 of a percentage point to the 6,5% official inflation rate) (cf. table 3, p. 13), than the annual rates of increase reflected at March 2001 in the price indices for food (+4,6% or with a contribution of 0,9 of a percentage point to the 7,4% official inflation rate), housing (+7,2% or with a contribution of 1,8 percentage points to the 7,4% official inflation rate), transport (+10,4% or with a contribution of 1,5 percentage points to the 7,4% official inflation rate), medical care and health expenses (+15,3% or with a contribution of 0,9 of a percentage point to the 7,4% official inflation rate) and household operation (+11,3% or with a contribution of 0,6 of a percentage point to the 7,4% official inflation rate). From March 2001 to April 2001 the Consumer Price Index for the metropolitan areas increased by 0,5% and the seasonally adjusted index increased by 0,4%.

The annual increase of 6,5% in the Consumer Price Index for the metropolitan areas is mainly due to annual increases in the price indices for housing (+1,7 percentage points, due to increases in all components in certain areas), transport (+1,3 percentage points, mainly due to a 17,1% increase in the petrol price from April 2000 to April 2001), food (+0,7 of a percentage point) and medical care and health expenses (+0,7 of a percentage point) (cf. table 3, p. 13).

The Consumer Price Index for the metropolitan areas increased by 0,5% from March 2001 to April 2001. This monthly increase is due to monthly increases in the price indices for transport (+0,3 of a percentage point, mainly due to a 18c/l increase in the price of petrol), food (+0,1 of a percentage point) and housing (+0,1 of a percentage point) (cf. table 4, p. 13).

Consumer Price Index excluding interest rates on mortgage bonds (CPIX)

The annual percentage change in the CPIX for the metropolitan areas is 7,2% at April 2001. This rate is 0,7 of a percentage point lower than the corresponding annual rate of 7,9% at March 2001. From March 2001 to April 2001 the CPIX for the metropolitan areas increased by 0,7% and the seasonally adjusted index increased by 0,1%.

The annual increase of 7,2% in the CPIX for the metropolitan areas is mainly due to annual increases in the price indices for transport (+1,6 percentage points, mainly due to a 17,1% increase in the petrol price from April 2000 to April 2001), housing (+1,4 percentage points, due to increases in all components in certain areas), medical care and health expenses (+0,9 of a percentage point) and food (+0,9 of a percentage point) (cf. table 7, p. 14).

From March 2001 to April 2001 the CPIX index for the metropolitan areas increased by 0,7%. This monthly increase is due to monthly increases in the price indices for transport (+0,3 of a percentage point, mainly due to a 18c/l increase in the price of petrol), food (+0,1 of a percentage point), clothing and footwear (+0,1 of a percentage point), housing (+0,1 of a percentage point) and household operation (+0,1 of a percentage point) (cf. table 8, p. 14).

Core inflation rate

The core inflation rate for the metropolitan areas (cf. explanatory notes 33, 34 and 35 on page 32) is 7,7% at April 2001. This rate is 0,7 of a percentage point lower than the corresponding annual rate of 8,4% at March 2001. From March 2001 to April 2001 the core index for the metropolitan areas increased by 0,8% and the seasonally adjusted index increased by 0,2%.

The annual increase of 7,7% in the core index for the metropolitan areas is mainly due to annual increases in the price indices for transport (+1,9 percentage points, mainly due to a 17,1% increase in the petrol price from April 2000 to April 2001), housing (+1,5 percentage points, due to increases in all components in certain areas), medical care and health expenses (+0,9 of a percentage point), household operation (+0,7 of a percentage point) and food (+0,5 of a percentage point). These increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (-0,1 of a percentage point) (cf. table 11, p. 15).

From March 2001 to April 2001 the core index for the metropolitan areas increased by 0,8%. This monthly increase is due to monthly increases in the price indices for transport (+0,4 of a percentage point, mainly due to a 18c/l increase in the price of petrol), alcoholic beverages (+0,1 of a percentage point), food (+0,1 of a percentage point), clothing and footwear (+0,1 of a percentage point) and housing (+0,1 of a percentage point) (cf. table 12, p. 15).

Food inflation

The price index for food reflects an annual rate of increase of 4,0% at April 2001. This rate is 0,6 of a percentage point lower than the corresponding annual rate of 4,6% at March 2001. From March 2001 to April 2001 this index increased by 0,4% and the seasonally adjusted index increased by 0,5%.

Relatively large annual increases occurred in the price indices for fish and other seafood (+9,8%), milk, cheese and eggs (+9,7%), meat (+6,6%), sugar (+6,5%), "other" food products (+5,2%) and coffee, tea and cocoa (+5,1%). Relatively large annual decreases occurred in the price indices for vegetables (-8,1%) and fruit and nuts (-0,7%) (cf. table 15, p. 16).

Monthly increases occurred in the price indices for sugar (+2,5%), fats and oils (+1,5%), grain products (+1,0%), fish and other seafood (+1,0%), "other" food products (+0,9%), vegetables (+0,8%), milk, cheese and eggs (+0,7%) and meat (+0,4%). These monthly increases were partially counteracted by monthly decreases in the price indices for fruit and nuts (-4,9%) and coffee, tea and cocoa (-0,4%) (cf. table 15, p. 16).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 7,1% at April 2001. This rate is 0,9 of a percentage point lower than the corresponding annual rate of 8,0% at March 2001. From March 2001 to April 2001 this index increased by 0,6% and the seasonally adjusted by 0,3%.

Relatively large annual increases occurred in the price indices for medical care and health expenses (+10,5%), education (+10,3%), household operation (+10,3%), cigarettes, cigars and tobacco (+9,8%), transport (+8,9%, mainly due to an annual increase of 17,1% in the price of petrol), non-alcoholic beverages (+8,2%) and alcoholic beverages

(+8,1%). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (-0,5%) (cf. table 15, p. 16).

Relatively large monthly increases occurred in the price indices for alcoholic beverages (+2,3%), non-alcoholic beverages (+2,1%), transport (+1,7%, mainly due to an annual increase of 18c/l in the price of petrol) and cigarettes, cigars and tobacco (+1,0%) (cf. table 15, p. 16).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to *annualise* the percentage change between the average index of the three months up to April 2001 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 2,0% (which is 1,8 percentage points lower than the corresponding rate of 3,8% for March 2001), while the unadjusted data shows an increase of 7,6% (which is 0,5 of a percentage point lower than the corresponding rate of 8,1% for March 2001).

Pensioners

The annual inflation rate for pensioners in the metropolitan areas is 6,9% at April 2001, which is 0,6 of a percentage point lower than the corresponding rate of 7,5% at March 2001 (cf. table 27, p. 27).

METROPOLITAN AND OTHER URBAN AREAS

KEY FIGURES AT APRIL 2001

Table C – Consumer Price Index (CPI) and the inflation rate for the metropolitan and other urban areas according to main indices

Main Indices	Indices (2000=100)			Percentage change between		
	April 2000	March 2001	April 2001	March 2001 and April 2001		April 2000 and April 2001
				Actual %	Seasonally Adjusted %	
CPI	98,9	104,4	104,9	+0,5	+0,3	+6,1

CPI excluding food price index	98,8	104,8	105,4	+0,6	+0,2	+6,7
CPI excluding Value Added Tax (VAT)	98,9	104,4	104,9	+0,5	+0,3	+6,1

KEY FINDINGS AT APRIL 2001

Inflation rate for the metropolitan and other urban areas

The inflation rate for the metropolitan and other urban areas is 6,1% at April 2001. This rate is 0,8 of a percentage point lower than the corresponding annual rate of 6,9% at March 2001, mainly due to lower annual rates of increase reflected at April 2001 in the price indices for food; cigarettes, cigars and tobacco; household operation; medical care and health expenses and transport, than the annual rates of increase reflected at March 2001 in the price indices for these items (cf. table 5, p. 13). From March 2001 to April 2001 the Consumer Price Index for the metropolitan and other urban areas increased by 0,5% and the seasonally adjusted index increased by 0,3%.

The annual increase of 6,1% in the Consumer Price Index for the metropolitan and other urban areas is mainly due to annual increases in the price indices for housing (+1,5 percentage points, due to increases in all components in certain areas), transport (+1,1 percentage points, mainly due to a 14,4% increase in the petrol price from April 2000 to April 2001), food (+0,8 of a percentage point), medical care and health expenses (+0,6 of a percentage point) and household operation (+0,5 of a percentage point) (cf. table 5, p. 13).

The Consumer Price Index for the metropolitan and other urban areas increased by 0,5% from March 2001 to April 2001. This monthly increase is due to monthly increases in the price indices for transport (+0,2 of a percentage point, mainly due to a 18c/l increase in the price of petrol), food (+0,1 of a percentage point), clothing and footwear (+0,1 of a percentage point) and housing (+0,1 of a percentage point) (cf. table 6, p. 13).

Consumer Price Index excluding interest rates on mortgage bonds (CPIX)

The annual percentage change in the CPIX for the metropolitan and other urban areas is 6,7% at April 2001. This rate is 0,8 of a percentage point lower than the corresponding annual rate of 7,5% at March 2001 (cf. table 2.2, p. 12). From March 2001 to April 2001 the CPIX for the metropolitan and other urban areas increased by 0,5% and the seasonally adjusted index remained unchanged.

The annual increase of 6,7% in the CPIX for the metropolitan and other urban areas is mainly due to annual increases in the price indices for transport (+1,3 percentage points, mainly due to a 14,4% increase in the petrol price from April 2000 to April 2001), housing (+1,3 percentage points, due to increases in all components in certain areas), food (+0,9 of a percentage point), medical care and health expenses (+0,8 of a percentage points) and household operation (+0,6 of a percentage point) (cf. table 9, p. 14).

From March 2001 to April 2001 the CPIX index for the metropolitan and other urban areas increased by 0,5%. This monthly increase is due to monthly increases in the price indices for transport (+0,3 of a percentage point, mainly due to a 18c/l increase in the price of petrol), food (+0,1 of a percentage point) and housing (+0,1 of a percentage point) (cf. table 10, p. 14).

Core inflation rate

The core inflation rate for the metropolitan and other urban areas (cf. explanatory notes 33, 34 and 35 on page 32) is 7,1% at April 2001, which is 0,8 of a percentage point lower than the corresponding annual rate of 7,9% at March 2001. From March 2001 to April 2001 the core index for the metropolitan and other urban areas increased by 0,6% and the seasonally adjusted index remained unchanged.

The annual increase of 7,1% in the core index for the metropolitan and other urban areas is mainly due to annual increases in the price indices for transport (+1,5 percentage points, mainly due to a 14,4% increase in the petrol price from April 2000 to April 2001), housing (+1,1 percentage point, due to increases in all components in certain areas), medical care and health expenses (+0,9 of a percentage points), household operation (+0,8 of a percentage point) and food (+0,6 of a percentage point) (cf. table 13, p. 15).

From March 2001 to April 2001 the core index for the metropolitan and other urban areas increased by 0,6%. This monthly increase is due to monthly increases in the price indices for transport (+0,3 of a percentage point, mainly due to a 18c/l increase in the price of petrol), food (+0,1 of a percentage point), clothing and footwear (+0,1 of a percentage point) and housing (+0,1 of a percentage point) (cf. table 14, p. 15).

Food inflation

The price index for food reflects an annual rate of increase of 3,9% at April 2001. This rate is 0,5 of a percentage point lower than the corresponding annual rate of 4,4% at March 2001. From March 2001 to April 2001 this index increased by 0,4% and the seasonally adjusted index increased by 0,5%.

Relatively large annual increases occurred in the price indices for fish and other seafood (+9,8%), milk, cheese and eggs (+9,6%) and meat (+7,5%). Relatively large annual decreases occurred in the price indices for vegetables (-8,3%) and fruit and nuts (-2,1%) (cf. table 16, p. 17).

From March 2001 to April 2001 the food index increased by 0,4%. This monthly increase is due to monthly increases in the price indices for sugar (+1,4%), vegetables (+1,0%), milk, cheese and eggs (+0,9%), grain products (+0,9%), fish and other seafood (+0,9%), fats and oils (+0,8%), "other" food products (+0,7%) and meat (+0,2%), which were partially counteracted by monthly decreases in the price indices for fruit and nuts (-4,2%) and coffee, tea and cocoa (-0,3%), (cf. table 16, p. 17).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 6,7% at April 2001. This rate is 0,7 of a percentage point lower than the corresponding annual rate of 7,4% at March 2001. From March 2001 to April 2001 this index increased by 0,6% and the seasonally adjusted index increased by 0,2%.

Relatively large annual increases occurred in the price indices for cigarettes, cigars and tobacco (+11,8%), household operation (+10,8%), medical care and health expenses (+10,5%), education (+10,3%), non-alcoholic beverages (+8,4%), transport (+8,2%, mainly due to an annual increase of 14,4% in the price of petrol), reading matter (+7,6%) and alcoholic beverages (+7,5%). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (-1,6%) (cf. table 16, p. 17).

Relatively large monthly increases occurred in the price indices for non-alcoholic beverages (+2,2%), alcoholic beverages (+1,8%) and transport (+1,5%, mainly due to a 18c/l increase in the price of petrol) (cf. table 16, p. 17).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to April 2001 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 4,6% (which is 1,2 percentage points lower than the corresponding rate of 5,8% for March 2001), while the unadjusted data shows an increase of 6,6% (which is 0,2 of a percentage point lower than the corresponding rate of 6,8 for March 2001).

Areas indices

The Durban/Pinetown and Nelspruit/Witbank areas, as well as the other urban areas in the Northern Cape, recorded the highest annual inflation rate of 7,3%, while the lowest annual inflation rate of 4,6% was recorded for Pietersburg and the other urban areas in the Freestate (cf. table 21, p. 22).

Regarding food prices, the highest annual inflation rate of 7,6,% was recorded for the Nelspruit/Witbank area, while the Klerksdorp/Orkney/Stilfontein area reflected the lowest annual increase of 0,5% (cf. table 22, p. 23).

Pensioners

The annual inflation rate for pensioners in the metropolitan and other urban areas is 6,2% at April 2001 (cf. table 27, p. 27). The other urban areas in the Northern Cape recorded the highest rate of increase of 8,1%, while the lowest rate of increase of 4,2% was recorded for the other urban areas in the Eastern Cape.

CPI FOR MAY 2001

In addition to the usual price surveys for May 2001, a survey of provincial hospitals and parking fees will be undertaken in certain areas, as it has come to Stats SA's attention that price changes in these items will be introduced during the first seven days of May 2001.

NOTES

Forthcoming issues	Issue	Expected date for publication
	May 2001	19 June 2001
	June 2001	17 July 2001
	July 2001	21 August 2001
	August 2001	18 September 2001
	September 2001	16 October 2001
	October 2001	20 November 2001

Purpose of the survey The Survey of Consumer Prices is a monthly survey covering a sample of retailers operating in the South African economy. The results of the survey are used to compile the *Consumer Price Index (CPI)*, an economic indicator, which indicates the changes in the prices of consumer goods and services. The annual percentage change in the *Consumer Price Index* indicates the inflation rate. These statistics are used by the private sector in the analysis of comparative business performance, as well as for contract price adjustments. It is also used in the determination of economic and social policy.

Rebasing the CPI from 195=100 to 2000=100 Following international practice, the base year of the Consumer Price Index (CPI) has been changed from 1995 =100 to 2000 =100 with effect from February 2001. The weighting system for the new base year will be calculated from the Survey of Income and Expenditure of Households, which was conducted in 2000 and will be available early in next year. For more information see the statistical release P0141.4 for the historical figures.

CPIX In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds (CPIX). Stats SA has accordingly calculated these measures and the CPIX, the most recent addition to the CPI suite, is included in this release (cf. table 1, p. 9). Stats SA releases detailed figures on the CPIX (cf. tables 17 and 18 on pages 18 and 19). The detailed figures were introduced and published as from February 2000.

Table 1 - Expenditure group and area indices of the Consumer Price Index and percentage change

Expenditure group/Area indices	Indices (2000=100)			Percentage change between		
	Apr 2000	Mar 2001	Apr 2001	Mar 2001 and Apr 2001		Apr 2000 and Apr 2001
				Actual %	Seasonally adjusted %	Actual %
Expenditure group indices						
Very low expenditure	98,6	103,8	104,3	+0,5	+0,6	+5,8
Low expenditure	98,8	104,5	105,0	+0,5	+0,5	+6,3
Middle expenditure	98,9	104,5	104,9	+0,4	+0,4	+6,1
High expenditure	98,9	104,9	105,4	+0,5	+0,3	+6,6
Very high expenditure	98,9	104,7	105,3	+0,6	+0,3	+6,5
All expenditure groups - Metropolitan areas	98,9	104,8	105,3	+0,5 ¹⁾	+0,4 ¹⁾	+6,5 ¹⁾
Metropolitan and other urban areas	98,9	104,4	104,9	+0,5	+0,3	+6,1
CPI excluding interest rates on mortgage bonds (CPIX) - Metropolitan areas	98,8	105,2	105,9	+0,7	+0,1	+7,2
Metropolitan and other urban areas	98,8	104,9	105,4	+0,5	0,0	+6,7
Core index - Metropolitan areas	98,8	105,6	106,4	+0,8	+0,2	+7,7
Metropolitan and other urban areas	98,9	105,3	105,9	+0,6	0,0	+7,1
Food only index - Metropolitan areas	99,5	103,1	103,5	+0,4	+0,5	+4,0
Metropolitan and other urban areas	99,3	102,8	103,2	+0,4	+0,5	+3,9
CPI excluding food - Metropolitan areas	98,8	105,2	105,8	+0,6	+0,3	+7,1
Metropolitan and other urban areas	98,8	104,8	105,4	+0,6	+0,2	+6,7
CPI excluding VAT - Metropolitan areas	98,9	104,8	105,3	+0,5 ¹⁾	+0,4 ¹⁾	+6,5 ¹⁾
Metropolitan and other urban areas	98,9	104,4	104,9	+0,5	+0,3	+6,1

1) On theoretical grounds and due to rounding off, these rates of change can differ.

EXPLANATORY NOTES

- | | | |
|---|----|---|
| Introduction | 1 | This publication contains results of the monthly Survey of Consumer (Retail) Prices. The purpose of the survey is to collect and provide information regarding changes in the overall level of prices of all goods and services bought by the average household |
| | 2 | The indices are classified according to the International Trade Classification (as indicated in tables 1, 3 to 18, 25 and 26) and geographical areas (as indicated in tables 21 to 24 and 27). Due to a new international classification system, prescribed by the 1993 System of National Accounts (SNA revision IV, 1993), compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, the Classification of Individual Consumption by Purpose (COICOP), Stats SA decided to classify the price information collected according to this new classification system, alongside the existing classification system. The information contained in tables 19 and 20 is classified according to COICOP. The indices are calculated on the base 2000=100. |
| | 3 | The Consumer Price Index (CPI) is a series of figures (numbers) showing how the average price level of all those goods and services (basket of goods and services) bought by a typical consumer or household changes over time. The inflation rate is the annual percentage change in the CPI. |
| Survey of Income and Expenditure of Households (IES) | 4 | Stats SA conducts a Survey of Income and Expenditure of Households every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain details on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa. |
| | 5 | The results from this survey is used to identify the goods and services bought by a typical consumer or household and which should be included in the basket of goods and services used to monitor price changes. |
| | 6 | Furthermore the results of this survey is used to determine the weights of the products/groups (indicator products) in the basket. The weights of a specific product/group is calculated by dividing the total amount spent by all households in South Africa on the specific product/group by the total amount spent on all goods and services by all households. |
| 1995 Survey of Income and Expenditure of Households | 7 | The last Survey of Income and Expenditure of Households was conducted by Stats SA in October 1995 covering a sample of 30 000 households. The information obtained through this survey was weighted according to the 1991 Population Census figures in order to represent all households in South Africa. |
| | 8 | Information regarding approximately 1 000 different goods and services groups was collected through this survey. Stats SA made a further breakdown of these groups, using supplementary sources. This process lead to a list of approximately 1 500 groups on which the calculation of the CPI is based. |
| | 9 | The weights of a specific product/group was calculated by dividing total expenditure by all households on the specific product/group by total expenditure on all goods and services by all households. The weights are revised every five years according to the latest Survey of Income and Expenditure of Households. Currently the 1995 weights are used to calculate the CPI. |
| Basket of goods and services | 10 | The current CPI basket covers approximately 1 500 goods and services. |

- 11 These goods and services are grouped according to the International Trade Classification into 17 main groups -
- Food;
 - Non-alcoholic beverages;
 - Alcoholic beverages;
 - Cigarettes, cigars and tobacco;
 - Clothing and Footwear;
 - Housing;
 - Fuel and power;
 - Furniture and equipment;
 - Household operation;
 - Medical care and health expenses;
 - Transport;
 - Communication;
 - Recreation and entertainment;
 - Reading matter;
 - Education;
 - Personal care; and
 - Other.
- 12 An alternative grouping of these goods and services is according to the COICOP classification into 9 main groups –
- Food, beverages and tobacco;
 - Clothing and Footwear;
 - Housing, water, electricity, gas and other fuels;
 - Furnishings, household equipment and routine maintenance of the house;
 - Health;
 - Transport;
 - Leisure, entertainment and culture;
 - Education; and
 - Miscellaneous goods and services.
- Weighting basis** 13 The CPI is a fixed weights index, which implies that the weight of each product/group stays the same for the five year period until the results of the next Survey of Income and Expenditure of Households become available.
- Expenditure groups** 14 Five expenditure group categories or quintiles are defined according to total annual expenditure per household as at October of the year of the survey of Income and Expenditure of Households. The five expenditure group categories used in this publication were defined according to total annual expenditure per household as at October 1995. These categories are as follows –
- very low expenditure group – up to R6 340;
 - low expenditure group R6 341 up to R11 590;
 - middle expenditure group R11 591 up to R21 909;
 - high expenditure group R21 910 up to R49 498; and
 - very high expenditure group – R49 499 and more.
- Scope of the CPI survey** 15 The Survey of Retail Prices is a retail trade and service outlets sample survey covering prices of selected consumer goods and services sold by these retail trade and service outlets to consumers in the 14 metropolitan and 39 other urban areas in the nine provinces. The results of the survey are used to compile the Consumer Price Index, an economic indicator.

16 Prices of goods and services included in the CPI are collected as at any day between the first and the seventh of the month concerned. Although these prices are generally collected monthly (see list of items in paragraph 17), the prices of some items are collected quarterly (see list of items in paragraph 18), six monthly or annually (see list of items in paragraph 19). The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices are about to change, these prices will be collected, even if it is not according to the normal collection schedule.

17 Prices of items/products collected monthly:

- Bread.
- Meat.
- Milk.
- Vegetables and fruit.
- Other groceries.
- Alcoholic beverages.
- Sweets, non-alcoholic beverages, ice-cream and tobacco products.
- Clothing and footwear.
- Repairs of clothing, footwear and furniture.
- Interest rates on mortgage bonds.
- Coal and wood.
- New vehicles, repairs and services.
- Motor spare parts and accessories.
- Petrol.
- Diesel.

18 Prices of items/products collected quarterly:

Items/products	Months of survey
<ul style="list-style-type: none"> • Garden tools. • Washing, ironing and dry-cleaning. • Sport equipment. • Reading matter and stationery. • Tariffs of hairdressing services. 	<ul style="list-style-type: none"> • January, April, July and October
<ul style="list-style-type: none"> • Ironware and crockery. • New and retread tyres. 	<ul style="list-style-type: none"> • February, May, August and November
<ul style="list-style-type: none"> • Furniture and equipment. • Household textiles. • Electrical appliances and equipment. • Medical, toilet and photographic requisites and services. • Motor vehicle insurance. 	<ul style="list-style-type: none"> • March, June, September and December

19 Prices of items/products collected annually:

Items/products	Month of survey
<ul style="list-style-type: none"> • Doctor's and dentist's fees. • Motor vehicle licence and registration fees. 	<ul style="list-style-type: none"> • January
<ul style="list-style-type: none"> • Toll-fees at toll-gates. • School funds. • University boarding and class fees. 	<ul style="list-style-type: none"> • March
<ul style="list-style-type: none"> • Parking fees. • Telephone and postal tariffs. • Public transport tariffs. 	<ul style="list-style-type: none"> • April • June
<ul style="list-style-type: none"> • Property taxes. • Refuse removal. • Sanitary fees. • Newspapers and magazines. 	<ul style="list-style-type: none"> • July

<ul style="list-style-type: none"> Entrance fees – drive-inns and bioscopes. 	<ul style="list-style-type: none"> August
<ul style="list-style-type: none"> Television licences; Maintenance of graves; and Rent of dwellings. 	<ul style="list-style-type: none"> October

20 Prices of items/products collected at other times of the year

Items/products	Month of survey
<ul style="list-style-type: none"> Winter clothing. 	<ul style="list-style-type: none"> March, April, May, June, July and August
<ul style="list-style-type: none"> Medicine 	<ul style="list-style-type: none"> January and June
<ul style="list-style-type: none"> Contribution to medical aid 	<ul style="list-style-type: none"> January, April and July
<ul style="list-style-type: none"> Property insurance Hospital fees 	<ul style="list-style-type: none"> January and July
<ul style="list-style-type: none"> Water Electricity 	<ul style="list-style-type: none"> January, July and August
<ul style="list-style-type: none"> Air transport fees 	<ul style="list-style-type: none"> January and August
<ul style="list-style-type: none"> Dog licences 	<ul style="list-style-type: none"> January, July and October

- Classification** 21 The International Trade Classification (ITC) was used to classify the products and services contained in the basket of goods and services.
- 22 A further classification of the products and services in the basket of goods and services, in line with international practices, was done according to the Classification of Individual consumption by Purpose (COICOP). The indices according to this classification are published in tables 19 and 20.
- Statistical unit** 23 The statistical unit is the department (e.g food department, hardware department, clothing department) of the retail trade and service establishments (branches). The establishment is the smallest economic unit that functions as a separate entity. Information is obtained from the different departments in each establishment. Each department in the establishment is classified according to the classification of the products that the department sells, which is then classified according to ITC as well as COICOP.
- Survey methodology and design** 24 Different phases of sampling takes place. Firstly, a sample of goods and services, based on the information collected through the Survey of Income and Expenditure of Households, is designed and drawn. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large quantity thus at least 0,01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- 25 Secondly, a geographical sample for price collection is designed and drawn. Currently 13 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The "other urban areas" are covered by nine provincial samples of four to five urban areas each, depending on the population size of the area. Therefore, a total of 39 "other urban areas" is sampled.
- 26 Thirdly, for each of the 53 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources, mainly the business register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from department stores, as well as specialist shops. The sample of outlets is revised every five years when the weights are revised.
- 27 Currently, an average of 110 000 price quotations are collected each month from approximately 2 200 outlets by means of 6 700 questionnaires. The indices are based on retail trade and service prices.
- Pricing basis** 28 Price information refers to the first seven days of the relevant month. The prices of all items include VAT.

Processing of price information	29	The prices that are quoted for the different products/services are edited to ensure that it is price comparable with the prices received for the same products in the previous month. If the price information difference between successive periods are outside the specified range, the current price levels are confirmed with the relative respondents through a telephone inquiry.
Calculating product price indices	30	Price relatives are calculated for each product per respondent by dividing the current price by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then multiplied with the product index for the previous month in order to obtain a product index for the relevant month.
Calculating group price indices	31	Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using the Laspeyres formula.
Contributions of specific items to the total CPI	32	The monthly (annual) contribution of a specific item or group of items to the total CPI is calculated by multiplying the weight of this item or group of items with the monthly (annual) change in the index for this item or group of items, divided by the index for 'All items'.
Core index	33	The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, the core index is derived by excluding items from the CPI basket on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.
	34	Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows – <ul style="list-style-type: none"> • Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought. • Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions. • Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate. • Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy). • Assessment rates: These taxes are predominantly determined by local government.
	35	The choice of exclusions was informed by best practice amongst several other international agencies, and after consultation with the South African Reserve Bank and other local technical experts.
CPI excluding interest rates on mortgage bonds (CPIX)	36	In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, the Core index excluding petrol and the CPIX. Stats SA has accordingly calculated these measures and only the CPIX and the Core index are included in this release (cf. table 1 on page 12).

Seasonal adjustment	37	Seasonal fluctuations in a time series are those fluctuations which usually tend to occur at about the same time and with the same magnitude each year. This may be the result of climatic influences or other <i>social and commercial</i> habits (e.g. the price of bread, which was previously revised in October of each year). In the analysis of time series, Stats SA makes use of the X-11 technique, which was developed by the American Bureau of Census. The seasonally adjusted indices for the latest month are calculated with seasonal factors, which are based on a time series analysis of information up to and including the previous month. Since Stats SA do not revise these indices on a monthly basis, historical seasonally adjusted indices are revised annually in January of each year.										
Reliability of estimates	38	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a <i>minimum</i> by careful designing the questionnaires, editing data and efficient operating procedures.										
Related publications	39	Users may also wish to refer to the following publications, which are available from Stats SA - <ul style="list-style-type: none"> • Bulletin of Statistics; and • SA Statistics. 										
Unpublished statistics	40	In some cases, Stats SA can also make available formation which is not published. This information can be made available in one or more of the following ways: computer printout, diskette or CD. Generally a fee is levied for providing unpublished information.

TECHNICAL NOTES

Response rate	1	The response rate for the CPI for the metropolitan areas for April 2001 was 90%.
	2	The response rate for the CPI for the metropolitan and other urban areas for April 2001 was 93%.

GLOSSARY

Annual inflation rate	The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.
Annual Percentage change	The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.
Average annual inflation rate	The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.
Average annual percentage change	The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.
CPI excluding interest rates on mortgage bonds (CPIX)	<p>The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services, which is used to compile the Consumer Price Index.</p> <p>In other countries in the world such as New Zealand, Sweden and Australia, which adopted as inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds CPIX, is included in this release (cf. table1 on page 12).</p>
Core index	<p>The core index is derived by exclusions from the CPI on the basis that changes in their prices are policy.</p> <p>Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows –</p> <ul style="list-style-type: none"> • Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought. • Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions. • Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate. • Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy). • Assessment rates: These taxes are predominantly determined by local government.
Core inflation	The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.
Establishment	An establishment (branch) is the smallest economic unit that functions as a separate entity.
Indicator products	Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.
Inflation rate	Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.
Monthly percentage change	The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.

Weights

The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.

FOR MORE INFORMATION

Stats SA publishes approximately 400 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Advance release calendar

An advance release calendar is disseminated on <http://www.statssa.gov.za>

Stats SA products

A complete set of Stats SA publications is available in the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division
 National Library of South Africa, Cape Town Division
 Natal Society Library, Pietermaritzburg
 Library of Parliament, Cape Town
 Bloemfontein Public Library
 Johannesburg Public Library
 Eastern Cape Library Services, King William's Town
 Central Regional Library, Pietersburg
 Central Reference Library, Nelspruit
 Central Reference Collection, Kimberley
 Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8095.

You can visit us on the Internet at: <http://www.statssa.gov.za>

Enquiries

Telephone number: (012) 310 8095/390/351/040
 (012) 310 8077/421/170 (technical enquiries)
 (012) 310 8161 (publishing)

Fax number: (012) 328 3932
