

Consumer Price Index (CPI)

January 2002

Co-operation between Statistics South Africa (Stats SA), the citizens of the country, the private sector and government institutions is essential for a successful statistical system. Without continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

Embargo: 11:30
Date: 28 February 2002

Stats SA publishes approximately three hundred different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally, but also by international economic and social-scientific communities, Stats SA releases are published in English only.

This data in this statistical release adheres to the Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF), which sets out standards on coverage, periodicity and timeliness of data; access by the public; integrity; and quality of the disseminated data.

EXECUTIVE SUMMARY

KEY FIGURES AT JANUARY 2002

Main Indices	Indices (2000=100)			Percentage change between		
	January 2001	December 2001	January 2002	December 2001 and January 2002		January 2001 and January 2002
				Actual %	Seasonally adjusted %	Actual %
CPI (metropolitan areas)	103,8	107,2	109,0	+ 1,7	+ 0,9	+ 5,0
CPI excluding interest rates on mortgage bonds (CPIX) (metropolitan and other urban areas)	103,8	109,3	111,2	+ 1,7	+ 1,3	+ 7,1

KEY FINDINGS AT JANUARY 2002

The headline inflation rate at January 2002 (i.e. the Consumer Price Index for the historical metropolitan areas at January 2002 compared with that at January 2001) is 5,0%

The official inflation rate (i.e. the percentage change in the CPI for the historical metropolitan areas at January 2002 compared with that at January 2001) is 5,0% at January 2002. This rate is 0,4 of a percentage point higher than the corresponding annual rate of 4,6% at December 2001 (cf. table 2.1, p. 13), mainly due to higher annual rates of increase reflected at January 2002 in the price indices for education (+ 17,4% or with a contribution of 0,4 of a percentage point to the 5,0% official inflation rate), food (+ 12,3% or with a contribution of 2,2 percentage points to the 5,0% official inflation rate) and transport (+ 3,8% or with a contribution of 0,6 of a percentage point to the 5,0% official inflation rate) (cf. table 3, p. 14), than the annual rates of increase reflected at December 2001 in the price index for education (+ 10,3% or with a contribution of 0,2 of a percentage point to the 4,6% official inflation rate), food (+ 11,4% or with a contribution of 2,0 percentage points to the 4,6% official inflation) and transport (+ 1,8% or with a contribution of 0,3 of a percentage point to the 4,6% official inflation rate). From December 2001 to January 2002 the Consumer Price Index for the historical metropolitan areas increased by 1,7%, and the seasonally adjusted index increased by 0,9%.

The annual increase of 5,0% in the Consumer Price Index for the historical metropolitan areas is mainly due to annual increases in the price indices for food (+ 2,2 percentage points), medical care and health expenses (+ 0,7 of a percentage point), transport (+ 0,6 of a percentage point) and education (+ 0,4 of a percentage point). These annual increases were partially counteracted by annual decreases in the price indices for housing, including interest rates on mortgage bonds (- 0,2 of a percentage point) and clothing and footwear (- 0,1 of a percentage point) (cf. table 3, p. 14).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan and other urban areas is 7,1% at January 2002 (i.e. the CPIX at January 2002 compared with that at January 2001)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rate on mortgage bonds, for the historical metropolitan and other urban areas is 7,1% at January 2002 (i.e. the CPIX at January 2002 compared with that at January 2001). This rate is 0,6 of a percentage point higher than the corresponding annual rate of 6,5% at December 2001 (cf. table 2.2, p. 13). From December 2001 to January 2002 the CPIX for the historical metropolitan and other urban areas increased by 1,7%, and the seasonally adjusted index increased by 1,3%.

The annual increase of 7,1% in the CPIX for the historical metropolitan and other urban areas is mainly due to annual increases in the price indices for food (+ 2,6 percentage points), housing, excluding interest rates on mortgage bonds (+ 1,3 percentage points, due to increases in all components in certain areas), medical care and health expenses (+ 0,8 of a percentage point), transport (+ 0,5 of a percentage point), education (+ 0,4 of a percentage point), personal care (+ 0,3 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (cf. table 9, p. 15).

UPDATED CPI BASKET

The expenditure patterns of households change with time as their needs and buying preferences change. To ensure that the CPI gives an accurate and reliable reflection of how the averages price level of all goods and services purchased by a typical consumer or household, it is necessary to update the basket of consumer goods and services (weighting structure) from time to time. The weights (relative importance of the various goods and services) used in the calculation of the CPI for January 2002 were derived from the Survey of Income and Expenditure of Households which was conducted by Stats SA in October 2000.

The index numbers for January 2002 were simultaneously calculated by using the “old” 1995 and the “new” 2000 weights, in order to link the index numbers based on the “new” weights to those based on the “old” weights. In this way so-called levelling factors, in respect of the various sub-indices were calculated. These levelling factors were subsequently applied to ensure the continuity of the time series. For example the different kinds and cuts of meat yielded an index of 119,2 for January 2002 according to the mix in the “old” basket. However, according to the mix in the “new” basket, the different kinds and cuts of meat yielded an index of 119,4 for January 2002. The calculated levelling factor of 0,9983 adjusted the index number according to the “new” basket to equal the index number according to the “old” basket. This linking was carried out in such a way that the resulting time series reflect only price changes and not differences in the price levels of the “old” and “new” baskets.

EXPENDITURE GROUPS

To depict household group categories, *expenditure* groups are used. The boundaries of the expenditure groups were obtained by calculating the quintiles (five equal groups) of the total number of households in South Africa and selecting the total expenditure of the top household (ranked according to expenditure) as the expenditure cut-off point in each of the quintiles.

According to the 2000 weights (cf. table 15, page 17) the very low expenditure group, although representing 20% of the population, through its expenditure contributes only 0,91% to the total CPI.

KEY FINDINGS AT JANUARY 2002

The headline inflation rate at January 2002 (i.e. the Consumer Price Index for the historical metropolitan areas at January 2002 compared with that at January 2001) is 5,0%

The official inflation rate (i.e. the percentage change in the CPI for the historical metropolitan areas at January 2002 compared with that at January 2001) is 5,0% at January 2002. This rate is 0,4 of a percentage point higher than the corresponding annual rate of 4,6% at December 2001 (cf. table 2.1, p. 13), mainly due to higher annual rates of increase reflected at January 2002 in the price indices for education (+ 17,4% or with a contribution of 0,4 of a percentage point to the 5,0% official inflation rate), food (+ 12,3% or with a contribution of 2,2 percentage points to the 5,0% official inflation rate) and transport (+ 3,8% or with a contribution of 0,6 of a percentage point to the 5,0% official inflation rate) (cf. table 3, p. 14), than the annual rates of increase reflected at December 2001 in the price index for education (+ 10,3% or with a contribution of 0,2 of a percentage point to the 4,6% official inflation rate), food (+ 11,4% or with a contribution of 2,0 percentage points to the 4,6% official inflation) and transport (+ 1,8% or with a contribution of 0,3 of a percentage point to the 4,6% official inflation rate). From December 2001 to January 2002 the Consumer Price Index for the historical metropolitan areas increased by 1,7%, and the seasonally adjusted index increased by 0,9%.

The annual increase of 5,0% in the Consumer Price Index for the historical metropolitan areas is mainly due to annual increases in the price indices for food (+ 2,2 percentage points), medical care and health expenses (+ 0,7 of a percentage point), transport (+ 0,6 of a percentage point) and education (+ 0,4 of a percentage point). These annual increases were partially counteracted by annual decreases in the price indices for housing, including interest rates on mortgage bonds (- 0,2 of a percentage point) and clothing and footwear (- 0,1 of a percentage point) (cf. table 3, p. 14).

The Consumer Price Index for the historical metropolitan areas increased by 1,7% from December 2001 to January 2002. This monthly increase is due to monthly increases in the price indices for medical care and health expenses (+ 0,5 of a percentage point), food (+ 0,3 of a percentage point), transport (+ 0,3 of a percentage point, mainly due to a 8c/l increase in the price of petrol), communication (+ 0,2 of a percentage point), housing (+ 0,1 of a percentage point), education (+ 0,1 of a percentage point), fuel and power (+ 0,1 of a percentage point) and "other" products (+ 0,1 of a percentage point) (cf. table 4, p. 14).

Annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) is 7,2% at January 2002 (i.e. the percentage change in the CPIX at January 2002 compared with that at January 2001)

The annual percentage change in the CPIX for the historical metropolitan areas is 7,2% at January 2002 (i.e. the percentage change in the CPIX at January 2002 compared with that at January 2001). This rate is 0,7 of a

percentage point higher than the corresponding annual rate of 6,5% at December 2001. From December 2001 to January 2002 the CPIX for the historical metropolitan areas increased by 1,9% and the seasonally adjusted index increased by 1,3%.

The annual increase of 7,2% in the CPIX for the historical metropolitan areas is mainly due to annual increases in the price indices for food (+ 2,5 percentage points), housing, excluding interest rates on mortgage bonds (+ 1,3 percentage points, due to increases in all components in certain areas), medical care and health expenses (+ 0,9 of a percentage point), transport (+ 0,6 of a percentage point) and education (+ 0,4 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (cf. table 7, p. 15).

From December 2001 to January 2002 the CPIX for the historical metropolitan areas increased by 1,9%. This monthly increase is due to monthly increases in the price indices for medical care and health expenses (+ 0,6 of a percentage point), food (+ 0,4 of a percentage point), transport (+ 0,3 of a percentage point, mainly due to a 8c/l increase in the price of petrol), communication (+ 0,2 of a percentage point), education (+ 0,2 of a percentage point), housing, excluding interest rates on mortgage bonds (+ 0,1 of a percentage point) and "other" products (+ 0,1 of a percentage point) (cf. table 8, p. 15).

Core inflation rate

The core inflation rate for the historical metropolitan areas (cf. explanatory notes 33, 34 and 35 on page 35) is 6,4% at January 2002 (i.e. the core index at January 2002 compared with that at January 2001). This rate is 0,6 of a percentage point higher than the corresponding annual rate of 5,8% at December 2001. From December 2001 to January 2002 the core index for the historical metropolitan areas increased by 1,9% and the seasonally adjusted index increased by 1,2% for the same period.

The annual increase of 6,4% in the core index for the historical metropolitan areas is mainly due to annual increases in the price indices for housing (+ 1,3 percentage points, due to increases in all components in certain areas), medical care and health expenses (+ 0,9 of a percentage point), food (+ 0,8 of a percentage point), transport (+ 0,7 of a percentage point), education (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point) and personal care (+ 0,3 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (cf. table 11, p. 16).

From December 2001 to January 2002 the core index for the historical metropolitan areas increased by 1,9%. This monthly increase is mainly due to monthly increases in the price indices for medical care and health expenses (+ 0,7 of a percentage point), transport (+ 0,3 of a percentage point, mainly due to a 8c/l increase in the price of petrol), education (+ 0,2 of a percentage point) and communication (+ 0,2 of a percentage point) (cf. table 12, p. 16).

Food inflation

The price index for food reflects an annual rate of increase of 12,3% at January 2002 (i.e. the CPI for food at January 2002 compared with that at January 2001). This rate is 0,9 of a percentage point higher than the corresponding annual rate of 11,4% at December 2001. From December 2001 to January 2002 this index increased by 1,7% and the seasonally adjusted index increased by 1,2%.

Annual increases occurred in the price indices for vegetables (+ 24,0%), fats and oils (+13,7%), meat (+ 13,6%), milk, cheese and eggs (+ 12,2%), fruit and nuts (+ 11,8%), fish and other seafood (+ 11,2%), grain products (+ 8,8%), "other" food products (+ 8,3%), sugar (+ 7,4%) and coffee, tea and cocoa (+ 6,2%) (cf. table 15, p. 17).

Monthly increases occurred in the price indices for fruit and nuts (+ 6,0%), vegetables (+ 3,1%), fats and oils (+ 1,9%), grain products (+ 1,7%), meat (+ 1,5%), "other" food products (+ 1,3%), sugar (+ 0,8%), milk, cheese and eggs (+ 0,7%), fish and other seafood (+ 0,5%) and coffee, tea and cocoa (+ 0,1%) (cf. table 15, p. 17).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 3,4% at January 2002 (i.e. the price index for non-food items at January 2002 compared with that at January 2001). This rate is 0,4 of a percentage point higher than the corresponding annual rate of 3,0% at December 2001. From December 2001 to January 2002 this index increased by 1,6% and the seasonally adjusted index increased by 1,0%.

Relatively large annual increases occurred in the price indices for education (+ 17,4%), medical care and health expenses (+ 10,9%), cigarettes, cigars and tobacco (+ 10,6%), non-alcoholic beverages (+ 9,3%), fuel and power (+ 8,1%), personal care (+ 7,8%), alcoholic beverages (+ 7,8%) and reading matter (+ 7,1%). These annual increases were partially counteracted by annual decreases in the price indices for clothing and footwear (- 2,0%) and housing (- 0,8%) (cf. table 15, p.17).

Relatively large monthly increases occurred in the price indices for medical care and health expenses (+ 8,6%), education (+ 6,5%), communication (+ 4,9%), reading matter (+ 2,7%), transport (+ 1,7%, mainly due to a 8c/l increase in the price of petrol) and fuel and power (+ 1,0%) (cf. table 15, p. 17).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to January 2002 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 6,8% (which is 2,7 percentage points higher than the corresponding rate of 4,1% for December 2001), while the unadjusted data shows an increase of 5,9% (which is 3,7 percentage points higher than the corresponding rate of 2,2% for December 2001).

Pensioners

The annual inflation rate for pensioners in the historical metropolitan areas is 6,6% at January 2002 (i.e. the CPI for pensioners at January 2002 compared with that at January 2001), which is 0,3 of a percentage point higher than the corresponding rate of 6,3% at December 2001 (cf. table 27, p. 28).

Updated CPI basket

More information regarding the updated CPI weighting structure (2000 weights) for the historical metropolitan areas is contained in statistical release P0141.5 - Consumer Price Index (CPI) - 2000 weights (historical metropolitan areas).

HISTORICAL METROPOLITAN AND OTHER URBAN AREAS

KEY FIGURES AT JANUARY 2002

Table B – Consumer Price Index (CPI) and the inflation rate for the metropolitan and other urban areas according to main indices

Main Indices	Indices (2000=100)			Percentage change between		
	January 2001	December 2001	January 2002	December 2001 and January 2002		January 2001 and January 2002
				Actual %	Seasonally Adjusted %	Actual %
CPI	103,5	107,2	108,9	+ 1,6	+ 1,0	+ 5,2
CPI excluding interest rates on Mortgage bonds (CPIX)	103,8	109,3	111,2	+ 1,7	+ 1,3	+ 7,1
Core index	104,2	108,8	110,7	+ 1,7	+ 1,1	+ 6,2
Food price index	101,5	112,0	113,9	+ 1,7	+ 1,5	+ 12,2
CPI excluding food price index	104,0	106,0	107,7	+ 1,6	+ 0,9	+ 3,6
CPI excluding Value Added Tax (VAT)	103,5	107,2	108,9	+ 1,6	+ 1,0	+ 5,2

KEY FINDINGS AT JANUARY 2002

Inflation rate for the historical metropolitan and other urban areas is 5,2% at January 2002 (i.e. the CPI at January 2002 compared with that at January 2001)

The inflation rate for the historical metropolitan and other urban areas is 5,2% at January 2002 (i.e. the CPI at January 2002 compared with that at January 2001). This rate is 0,5 of a percentage point higher than the corresponding annual rate of 4,7% at December 2001, mainly due to higher annual rates of increase reflected at January 2002 in the price indices for food, transport, medical care and health expenses, education and personal care, than the annual rate of increases reflected at December 2001 in the price indices for these items (cf. table 5, p. 14). From December 2001 to January 2002 the Consumer Price Index for the historical metropolitan and other urban areas increased by 1,6% and the seasonally adjusted index increased by 1,0%.

The annual increase of 5,2% in the Consumer Price Index for the historical metropolitan and other urban areas is mainly due to annual increases in the price indices for food (+ 2,3 percentage points), medical care and health expenses (+ 0,7 of a percentage point), transport (+ 0,5 of a percentage point), education (+ 0,3 of a percentage point) and personal care (+ 0,3 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (cf. table 5, p. 14).

From December 2001 to January 2002 the Consumer Price Index for the historical metropolitan and other urban areas increased by 1,6%. This monthly increase is due to monthly increases in the price indices for medical care and health expenses (+ 0,5 of a percentage point), food (+ 0,4 of a percentage point), transport (+ 0,2 of a percentage point, mainly due to a 8c/l increase in the price of petrol), communication (+ 0,2 of a percentage point), education (+ 0,1 of a percentage point), housing (+ 0,1 of a percentage point) and furniture and equipment (+ 0,1 of a percentage point) (cf. table 6, p. 14).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan and other urban areas is 7,1% at January 2002 (i.e. the CPIX at January 2002 compared with that at January 2001)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rate on mortgage bonds, for the historical metropolitan and other urban areas is 7,1% at January 2002 (i.e. the CPIX at January 2002 compared with that at January 2001). This rate is 0,6 of a percentage point higher than the corresponding annual rate of 6,5% at December 2001 (cf. table 2.2, p. 13). From December 2001 to January 2002 the CPIX for the historical metropolitan and other urban areas increased by 1,7%, and the seasonally adjusted index increased by 1,3%.

The annual increase of 7,1% in the CPIX for the historical metropolitan and other urban areas is mainly due to annual increases in the price indices for food (+ 2,6 percentage points), housing, excluding interest rates on mortgage bonds (+ 1,3 percentage points, due to increases in all components in certain areas), medical care and health expenses (+ 0,8 of a percentage point), transport (+ 0,5 of a percentage point), education (+ 0,4 of a percentage point), personal care (+ 0,3 of a percentage point) and fuel and power (+ 0,3 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,1 of a percentage point) (cf. table 9, p. 15).

From December 2001 to January 2002 the CPIX for the historical metropolitan and other urban areas increased by 1,7%. This monthly increase was due to monthly increases in the price indices for medical care and health expenses (+ 0,6 of a percentage point), food (+ 0,4 of a percentage point), transport (+ 0,2 of a percentage point, mainly due to a 8c/l increase in the price of petrol), communication (+ 0,2 of a percentage point), education (+ 0,2 of a percentage point) and housing, excluding interest rates on mortgage bonds (+ 0,1 of a percentage point) (cf. table 10, p. 15).

Core inflation rate

The core inflation rate for the historical metropolitan and other urban areas (cf. explanatory notes 33, 34 and 35 on page 35) is 6,2% at January 2002 (i.e. the core index at January 2002 compared with that at January 2001), which is 0,5 of a percentage point higher than the corresponding annual rate of 5,7% at December 2001. From December 2001 to January 2002 the core index for the historical metropolitan and other urban areas increased by 1,7% and the seasonally adjusted index increased by 1,1%.

The annual increase of 6,2% in the core index for the historical metropolitan and other urban areas is mainly due to annual increases in the price indices for housing (+ 1,1 percentage points), food (+ 1,1 percentage points), medical care and health expenses (+ 0,8 of a percentage point), transport (+ 0,6 of a percentage point), education (+ 0,4 of a percentage point) and personal care (+ 0,4 of a percentage point). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (cf. table 13, p. 16).

From December 2001 to January 2002 the core index for the historical metropolitan and other urban areas increased by 1,7%. This monthly increase is mainly due to monthly increases in the price indices for medical care and health expenses (+ 0,6 of a percentage point), transport (+ 0,2 of a percentage point, mainly due to a 8c/l increase in the price of petrol), education (+ 0,2 of a percentage point), food (+ 0,2 of a percentage point) and communication (+ 0,2 of a percentage point) (cf. table 14, p. 16).

Food inflation

The price index for food reflects an annual rate of increase of 12,2% at January 2002 (i.e. the CPI for food at January 2002 compared with that at January 2001). This rate is 1,2 percentage points higher than the corresponding annual rate of 11,0% at December 2001. From December 2001 to January 2002 this index increased by 1,7% and the seasonally adjusted index increased by 1,5%.

Annual increases occurred in the price indices for vegetables (+ 22,4%), fats and oils (+ 15,0%), fish and other seafood (+ 13,5%), meat (+ 13,1%), fruit and nuts (+ 12,4%), milk, cheese and eggs (+ 11,5%), "other" food products (+ 9,3%), grain products (+ 9,2%), sugar (+ 7,4%) and coffee, tea and cocoa (+ 5,8%) (cf. table 16, p. 18).

From December 2001 to January 2002 the food index increased by 1,7%. This monthly increase is due to monthly increases in the price indices for fruit and nuts (+ 5,2%), vegetables (+ 2,1%), grain products (+ 2,1%), fats and oils (+ 1,9%), meat (+ 1,6%), "other" food products (+ 1,2%), milk, cheese and eggs (+ 0,7%), fish and other seafood (+ 0,7%), sugar (+ 0,5%) and coffee, tea and cocoa (+ 0,1%) (cf. table 16, p. 18).

Price index for non-food items

The price index for non-food items shows an annual rate of increase of 3,6% at January 2002 (i.e. the non-food index at January 2002 compared with that at January 2001). This rate is 0,5 of a percentage point higher than the corresponding annual rate of 3,1% at December 2001. From December 2001 to January 2002 this index increased by 1,6%, and the seasonally adjusted index increased by 0,9%.

Relatively large annual increases occurred in the price indices for education (+ 18,0%), cigarettes, cigars and tobacco (+ 11,4%), medical care and health expenses (+ 10,8%), non-alcoholic beverages (+ 9,1%), personal care (+ 8,4%), alcoholic beverages (+ 7,6%), reading matter (+ 7,1%) and fuel and power (+ 6,5%). These annual increases were partially counteracted by an annual decrease in the price index for clothing and footwear (- 2,7%) (cf. table 16, p.18).

Relatively large monthly increases occurred in the price indices for medical care and health expenses (+ 8,5%), education (+ 7,0%), communication (+ 4,9%), reading matter (+ 2,7%) and transport (+1,4%, mainly due to a 8c/l increase in the price of petrol) (cf. table 16, p. 18).

An alternative expression of the change in the Consumer Price Index

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to January 2002 and the average index of the previous three months. This approach, when using seasonally adjusted data shows an increase of 7,2% (which is 3,0 percentage points higher than the corresponding rate of 4,2% for December 2001), while the unadjusted data also shows an increase of 5,9% (which is 3,5 percentage points higher than the corresponding rate of 2,4% for December 2001).

Areas indices

The Kimberley area, recorded the highest annual inflation rate of 8,3%, while the lowest annual inflation rate of 2,3% was recorded for the Polokwane (Pietersburg) area (cf. table 21, p. 23).

Regarding food prices, the highest annual inflation rate of 16,1% was recorded for the other urban areas in Mpumalanga, while the other urban areas in the Northern Cape recorded the lowest annual increase of 9,1% (cf. table 22, p. 24).

Pensioners

The annual inflation rate for pensioners in the historical metropolitan and other urban areas is 7,0% at January 2002 (i.e. the CPI for pensioners at January 2002 compared with that at January 2001) (cf. table 27, p. 28). The Nelspruit/Witbank area recorded the highest rate of increase of 9,5%, while the lowest rate of increase of 1,5% was recorded for the Bloemfontein area.

CPI FOR FEBRUARY 2002

In addition to the usual price surveys for February 2002, a survey of train tariffs and electricity tariffs will be undertaken in certain areas, as it has come to Stats SA's attention that prices changes in these items will be introduced during the first seven days of February 2002.

Updated CPI basket

More information regarding the updated CPI weighting structure (2000 weights) for the historical metropolitan and other urban areas is contained in statistical release P0141.5 - Consumer Price Index (CPI) - 2000 weights (historical metropolitan and other urban areas).

More information regarding the updated CPI weighting structure (2000 weights) for the RSA is contained in statistical release P0141.5 - Consumer Price Index (CPI) - 2000 weights (RSA).

Note

It is important to take note that the impact of the depreciating rand is not yet fully reflected in the CPI. In the calculation of the CPI, the prices of consumer goods and services are monitored when they are sold in the South African retail market. Historical experience showed that there might be a time lag of up to 12 months depending on the type of product and delivery period of the imported commodities.

NOTES

Forthcoming issues	Issue	Expected date for publication
	February 2002	19 March 2002
	March 2002	16 April 2002
	April 2002	21 May 2002
	May 2002	18 June 2002
	June 2002	16 July 2002
	July 2002	20 August 2002
Purpose of the survey	The Survey of Consumer Prices is a monthly survey covering a sample of retailers operating in the South African economy. The results of the survey are used to compile the Consumer Price Index (CPI), an economic indicator, which indicates the changes in the prices of consumer goods and services. The annual percentage change in the Consumer Price Index indicates the inflation rate. These statistics are used by the private sector in the analysis of comparative business performance, as well as for contract price adjustments. It is also used in the determination of economic and social policy.	
Rebasing the CPI from 1995=100 to 2000=100	Following international practice, the base year of the Consumer Price Index (CPI) has been changed from 1995 =100 to 2000 =100 with effect from February 2001.	
Updating the CPI basket	The weighting system for the CPI is calculated, as from January 2002, from the Survey of Income and Expenditure of Households, which was conducted in October 2000. For more information on the detailed weights, see statistical releases P0141.5.	
CPIX	<p>In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds (CPIX). Stats SA has accordingly calculated these measures and the CPIX, the most recent addition to the CPI suite, is included in this release (cf. table 2.2, p. 13).</p> <p>Stats SA releases detailed figures on the CPIX (cf. tables 17 and 18 on pages 19 and 20). The detailed figures were introduced and published as from February 2000.</p>	
Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF)	<p>South Africa's data dissemination practices are assessed against the IMF's Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF's Dissemination Standards Bulletin Board on the internet at http://dsbb.imf.org. This is a "best practice" standard. It covers four sectors of the economy i.e. the real, fiscal, financial and external sectors, as well as population and identifies four dimensions i.e. data, access, integrity and quality, of data dissemination. For each of these dimensions, the SDDS prescribes two to four monitorable elements or good practices that can be observed, or monitored, by users of statistics. However, the IMF's monitoring of the SDDS as authorised by the IMF's Board of Executive Directors is limited to the dimensions of data i.e. coverage, periodicity and timeliness, and access i.e. advanced release calendar. It should also be noted that the SDDS is a disclosure standard, i.e. it focuses on encouraging the authorities to provide information to users, including information that will enable users to assess the data.</p> <p>The four institutions responsible for the compilation and dissemination of the SDDS prescribed data categories are National Treasury, the South African Revenue Services (SARS), the South African Reserve Bank (SARB) and Statistics South Africa (Stats SA).</p> <p>National Treasury is responsible for compiling and disseminating data on the national budget (budgetary central government operations). SARS is responsible for compiling and disseminating of data on international merchandise trade.</p> <p>The SARB is responsible for compiling and disseminating data on national accounts, the analytical accounts of the banking sector, the analytical accounts of the central bank, general government operations, consolidated government operations, central government debt, interest rate, exchange rates, share price indices, balance of payments, the international investment position, international reserves and foreign currency liquidity.</p> <p>Stats SA is responsible for compiling and disseminating data on the production index, national accounts, the production price index, consumer price index, labour market and population.</p>	

South Africa has subscribed to the SDDS since 2 August 1996 and started posting its metadata on 27 September 1996. South Africa met the SDDS specifications for the coverage, periodicity and timeliness of the data, and for the dissemination of advanced release calendars on 18 September 2000. The National Summary Data Page has been hyperlinked since 24 April 1997 and the Data Template on International Reserves and Foreign Currency Liquidity was disseminated on 1 September 2000.

South Africa is the only subscriber to the SDDS from the African continent.

**Reports on
Observance of
Standards and
Codes (ROSC) of
the International
Monetary Fund
(IMF)**

The IMF has been working actively on producing Reports on Observance of Standards and Codes (ROSC) as a step to strengthen the architecture of the international financial system. The objectives of the ROSC include the promotion of increased transparency and encouragement of implementation of internationally accepted standards and codes. One of the ROSC components is the data dissemination module, which falls under the responsibility of the IMF's Statistics Department (STA). In this module, a country is assessed according to the SDDS.

The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for these categories. It is complemented by an assessment of the quality of the Consumer Price Index, using the Data Quality Assessment Framework (DQAF) developed by the IMF's Statistics Department.

The DQAF undertakes to assess data quality under the following dimensions -

- ♦ Prerequisites of quality;
- ♦ Integrity;
- ♦ Methodological soundness;
- ♦ Accuracy and reliability;
- ♦ Serviceability; and
- ♦ Accessibility

An IMF delegation visited South Africa from 7 to 18 May 2001 and produced a draft data ROSC for South Africa that will be finalised during the third quarter of 2001. This ROSC will indicate to which extent South Africa has observed the IMF's requirements.

Table 1 - Expenditure group and area indices of the Consumer Price Index and percentage change

Expenditure group/Area indices	Indices (2000=100)			Percentage change between		
	Jan 2001	Dec 2001	Jan 2002	Dec 2001 and Jan 2002		Jan 2001 and Jan 2002
				Actual %	Seasonally adjusted %	
Expenditure group indices						
Very low expenditure	102,5	110,6	111,8	+1,1	+1,0	+9,1
Low expenditure	103,2	111,2	112,5	+1,2	+1,0	+9,0
Middle expenditure	103,2	110,0	111,5	+1,4	+0,9	+8,0
High expenditure	103,7	109,1	110,9	+1,6	+1,1	+6,9
Very high expenditure	103,8	106,3	108,1	+1,7	+1,1	+4,1
All expenditure groups - Metropolitan areas	103,8	107,2	109,0	+1,7	+0,9	+5,0
Metropolitan and other urban areas	103,5	107,2	108,9	+1,6	+1,0	+5,2
CPI excluding interest rates on mortgage bonds (CPIX) - Metropolitan areas	104,1	109,5	111,6	+1,9	+1,3	+7,2
Metropolitan and other urban areas	103,8	109,3	111,2	+1,7	+1,3	+7,1
Core index - Metropolitan areas	104,5	109,1	111,2	+1,9	+1,2	+6,4
Metropolitan and other urban areas	104,2	108,8	110,7	+1,7	+1,1	+6,2
Food only index - Metropolitan areas	101,6	112,2	114,1	+1,7	+1,2	+12,3
Metropolitan and other urban areas	101,5	112,0	113,9	+1,7	+1,5	+12,2
CPI excluding food - Metropolitan areas	104,3	106,1	107,8	+1,6	+1,0	+3,4
Metropolitan and other urban areas	104,0	106,0	107,7	+1,6	+0,9	+3,6
CPI excluding VAT - Metropolitan areas	103,8	107,2	109,0	+1,7	+1,0	+5,0
Metropolitan and other urban areas	103,5	107,2	108,9	+1,6	+1,0	+5,2

1) On theoretical grounds and due to rounding off, these rates of change can differ.

EXPLANATORY NOTES

- Introduction**
- 1 This publication contains results of the monthly Survey of Consumer (Retail) Prices. The purpose of the survey is to collect and provide information regarding changes in the overall level of prices of all goods and services bought by the average household
 - 2 The indices are classified according to the International Trade Classification (as indicated in tables 1, 3 to 18, 25 and 26) and geographical areas (as indicated in tables 21 to 24 and 27). Due to a new international classification system, prescribed by the 1993 System of National Accounts (SNA revision IV, 1993), compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, the Classification of Individual Consumption by Purpose (COICOP), Stats SA decided to classify the price information collected according to this new classification system, alongside the existing classification system. The information contained in tables 19 and 20 is classified according to COICOP. The indices are calculated on the base 2000=100.
 - 3 The Consumer Price Index (CPI) is a series of figures (numbers) showing how the average price level of all those goods and services (basket of goods and services) bought by a typical consumer or household changes over time. The inflation rate is the annual percentage change in the CPI.
- Survey of Income and Expenditure of Households (IES)**
- 4 Stats SA conducts a Survey of Income and Expenditure of Households every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain details on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa.
 - 5 Every five years the results from this survey are used to identify the goods and services bought by a typical consumer or household and which should be included in the basket of goods and services used to monitor price changes.
 - 6 Furthermore, every five years the results from the Survey of Income and Expenditure of Households are used to determine the weights of the products/groups (indicator products) in the basket. The weights of a specific product/group is calculated by dividing the total amount spent by all households in South Africa on the specific product/group by the total amount spent on all goods and services by all households.
- 2000 Survey of Income and Expenditure of Households**
- 7 Stats SA conducted the five-yearly Survey of Income and Expenditure of Households in October 2000 covering a sample of 30 000 households. The information obtained through this survey was weighted according to the 1996 Population Census figures in order to represent all households in South Africa.
 - 8 The 2000 Survey of Income and Expenditure of Households collected information regarding approximately 1 000 different goods and services groups .Stats SA made a further breakdown of these groups using supplementary sources. This process led to a list of approximately 1 500 groups on which the current calculation of the CPI is based.
 - 9 Based on the above-mentioned information for 2000 (cf. paragraphs 7 and 8), the new weight for a specific product/group was calculated by dividing total expenditure by all households in South Africa on the specific product/group by total expenditure on all goods and services by all households .in South Africa. Stats SA implemented the new weights, i.e. the 2000 weights based on the 2000 Survey of Income and Expenditure of Households, as from the January 2002 CPI publication.
- Basket of goods and services**
- 10 The current CPI basket covers approximately 1 500 goods and services.

- 11** These goods and services are grouped according to the International Trade Classification into 17 main groups -
- Food;
 - Non-alcoholic beverages;
 - Alcoholic beverages;
 - Cigarettes, cigars and tobacco;
 - Clothing and Footwear;
 - Housing;
 - Fuel and power;
 - Furniture and equipment;
 - Household operation;
 - Medical care and health expenses;
 - Transport;
 - Communication;
 - Recreation and entertainment;
 - Reading matter;
 - Education;
 - Personal care; and
 - Other.
- 12** These goods and services are grouped according to an alternative classification, i.e. the COICOP classification, into nine main groups –
- Food, beverages and tobacco;
 - Clothing and Footwear;
 - Housing, water, electricity, gas and other fuels;
 - Furnishings, household equipment and routine maintenance of the house;
 - Health;
 - Transport;
 - Leisure, entertainment and culture;
 - Education; and
 - Miscellaneous goods and services.
- Weighting basis** **13** The CPI is a fixed weights index, which implies that the weight of each product/group stays the same for the five year period until the results of the next Survey of Income and Expenditure of Households become available.
- Expenditure groups** **14** Five expenditure group categories or quintiles are defined according to total annual expenditure per household as at October of the year of the Survey of Income and Expenditure of Households. The five expenditure group categories used in this publication were defined according to total annual expenditure per household as at October 2000. These categories are as follows –
- very low expenditure group – up to R8 070;
 - low expenditure group R8 071 up to R12 263;
 - middle expenditure group R12 264 up to R24 365;
 - high expenditure group R24 366 up to R55 159; and
 - very high expenditure group – R55 160 and more.
- Scope of the CPI survey** **15** The Survey of Retail Prices is a retail trade and service outlets sample survey covering prices of selected consumer goods and services sold by these retail trade and service outlets to consumers in the 14 metropolitan and 39 other urban areas in the nine provinces. The results of the survey are used to compile the Consumer Price Index, an economic indicator.

16 Prices of goods and services included in the CPI are collected as at any day between the first and the seventh of the month concerned. Although these prices are generally collected monthly (see list of items in paragraph 17), the prices of some items are collected quarterly (see list of items in paragraph 18), six monthly or annually (see list of items in paragraph 19). The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices are about to change, these prices will be collected, even if it is not according to the normal collection schedule.

17 Prices of items/products collected monthly:

- Bread.
- Meat.
- Milk.
- Vegetables and fruit.
- Other groceries.
- Alcoholic beverages.
- Sweets, non-alcoholic beverages, ice-cream and tobacco products.
- Clothing and footwear.
- Repairs of clothing, footwear and furniture.
- Interest rates on mortgage bonds.
- Coal and wood.
- New vehicles, repairs and services.
- Motor spare parts and accessories.
- Petrol.
- Diesel.

18 Prices of items/products collected quarterly:

Items/products	Months of survey
<ul style="list-style-type: none"> • Garden tools. • Washing, ironing and dry-cleaning. • Sport equipment. • Reading matter and stationery. • Tariffs of hairdressing services. 	<ul style="list-style-type: none"> • January, April, July and October
<ul style="list-style-type: none"> • Ironware and crockery. • New and retread tyres. 	<ul style="list-style-type: none"> • February, May, August and November
<ul style="list-style-type: none"> • Furniture and equipment. • Household textiles. • Electrical appliances and equipment. • Medical, toilet and photographic requisites and services. • Motor vehicle insurance. 	<ul style="list-style-type: none"> • March, June, September and December

19 Prices of items/products collected annually:

Items/products	Month of survey
<ul style="list-style-type: none"> • Doctor's and dentist's fees. • Motor vehicle licence and registration fees. 	<ul style="list-style-type: none"> • January
<ul style="list-style-type: none"> • Toll-fees at toll-gates. • School funds. • University boarding and class fees. 	<ul style="list-style-type: none"> • March
<ul style="list-style-type: none"> • Parking fees. • Telephone and postal tariffs. 	<ul style="list-style-type: none"> • April
<ul style="list-style-type: none"> • Public transport tariffs. 	<ul style="list-style-type: none"> • June
<ul style="list-style-type: none"> • Property taxes. • Refuse removal. • Sanitary fees. • Newspapers and magazines. 	<ul style="list-style-type: none"> • July
<ul style="list-style-type: none"> • Entrance fees – drive-inns and bioscopes. 	<ul style="list-style-type: none"> • August
<ul style="list-style-type: none"> • Television licences; • Maintenance of graves; and • Rent of dwellings. 	<ul style="list-style-type: none"> • October

20 Prices of items/products collected at other times of the year

Items/products	Month of survey
• Winter clothing.	• March, April, May, June, July and August
• Medicine	• January and June
• Contribution to medical aid	• January, April and July
• Property insurance • Hospital fees	• January and July
• Water • Electricity	• January, July and August
• Air transport fees	• January and August
• Dog licences	• January, July and October

- Classification** 21 The International Trade Classification (ITC) was used to classify the products and services contained in the basket of goods and services.
- 22 A further classification of the products and services in the basket of goods and services, in line with international practices, was done according to the Classification of Individual consumption by Purpose (COICOP). The indices according to this classification are published in tables 19 and 20.
- Statistical unit** 23 The statistical unit is the department (e.g food department, hardware department, clothing department) of the retail trade and service establishments (branches). The establishment is the smallest economic unit that functions as a separate entity. Information is obtained from the different departments in each establishment. Each department in the establishment is classified according to the classification of the products that the department sells, which is then classified according to ITC as well as COICOP.
- Survey methodology and design** 24 Different phases of sampling takes place. Firstly, a sample of goods and services, based on the Information collected through the Survey of Income and Expenditure of Households, is designed and selected. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large quantity, at least 0,01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- 25 Secondly, a geographical sample for price collection is designed and selected. Currently 13 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The “other urban areas” are covered by nine provincial samples of four to five urban areas each, depending on the population size of the area. Therefore, a total of 39 “other urban areas” is sampled.
- 26 Thirdly, for each of the 53 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources, mainly the business register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from department stores, as well as specialist shops. The sample of outlets is revised every five years when the weights are revised.
- 27 Currently, an average of 110 000 price quotations are collected each month from approximately 2 200 outlets by means of 6 700 questionnaires. The indices are based on retail trade and service prices.
- Pricing basis** 28 Price information refers to the first seven days of the relevant month. **The prices of all items include VAT.**

Processing of price information	29	The prices that are quoted for the different products/services are edited to ensure that it is price comparable with the prices received for the same products in the previous month. If the price information difference between successive periods are outside the specified range, the current price levels are confirmed with the relative respondents through a telephone inquiry.
Calculating product price indices	30	Price relatives are calculated for each product per respondent by dividing the current price by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then multiplied with the product index for the previous month in order to obtain a product index for the relevant month.
Calculating group price indices	31	Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using the Laspeyres formula.
Contributions of specific items to the total CPI	32	The monthly (annual) contribution of a specific item or group of items to the total CPI is calculated by multiplying the weight of this item or group of items with the monthly (annual) change in the index for this item or group of items, divided by the index for 'All items'.
Core index	33	The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, the core index is derived by excluding items from the CPI basket on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.
	34	Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows – <ul style="list-style-type: none"> • Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought. • Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions. • Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate. • Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy). • Assessment rates: These taxes are predominantly determined by local government.
	35	The choice of exclusions was informed by best practice amongst several other international agencies, and after consultation with the South African Reserve Bank and other local technical experts.
CPI excluding interest rates on mortgage bonds (CPIX)	36	In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, the Core index excluding petrol and the CPIX. Stats SA has accordingly calculated these measures and only the CPIX and the Core index are included in this release (cf. table 1 on page 13).

Seasonal adjustment	37	Seasonal fluctuations in a time series are those fluctuations which usually tend to occur at about the same time and with the same magnitude each year. This may be the result of climatic influences or other social and commercial habits (e.g. the price of bread, which was previously revised in October of each year). In the analysis of time series, Stats SA makes use of the X-11 technique, which was developed by the American Bureau of Census. The seasonally adjusted indices for the latest month are calculated with seasonal factors, which are based on a time series analysis of information up to and including the previous month. Since Stats SA do not revise these indices on a monthly basis, historical seasonally adjusted indices are revised annually in January of each year.										
Reliability of estimates	38	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.

TECHNICAL NOTES

Response rate	1	The response rate for the CPI for the metropolitan areas for January 2002 was 91%.
	2	The response rate for the CPI for the metropolitan and other urban areas for January 2002 was 89%.

GLOSSARY

Annual inflation rate	The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.
Annual percentage change	The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.
Average annual inflation rate	The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.
Average annual percentage change	The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.
CPI excluding interest rates on mortgage bonds (CPIX)	<p>The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services, which is used to compile the Consumer Price Index.</p> <p>In other countries in the world such as New Zealand, Sweden and Australia, which adopted as inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds CPIX, is included in this release (cf. table1 on page 13).</p>
Core index	<p>The core index is derived by exclusions from the CPI on the basis that changes in their prices are policy.</p> <p>Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows –</p> <ul style="list-style-type: none"> • Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought. • Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions. • Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate. • Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy). • Assessment rates: These taxes are predominantly determined by local government.
Core inflation	The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.
Establishment	An establishment (branch) is the smallest economic unit that functions as a separate entity.
Indicator products	Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.
Inflation rate	Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Metropolitan area	<p>Metropolitan areas in the CPI refer to the following 13 metropolitan areas used in the compilation of the CPI –</p> <ul style="list-style-type: none"> • Cape Peninsula • Port Elizabeth/Uitenhage • East London • Kimberley • Bloemfontein • Free State Goldfields • Durban/Pinetown • Pietermaritzburg • Klerksdorp/Stilfontein/Orkney • Pretoria/ Centurion/Akasia • Witwatersrand • Nelspruit/Witbank • Polokwane (Pietersburg) <p>Initially 12 metropolitan areas were selected, based on the population figures as well as the size of the economical activity in these areas. However, when the 9 provinces were introduced the Vaal Triangle metropolitan area was included partially (van der Biljpark and Vereeniging) in the other urban areas of Gauteng and partially (Sasolburg) in the other urban areas of the Free State. Due to the fact that there were no metropolitan areas in the Limpopo Province and Mpumalanga, the main urban areas and Nelspruit/Witbank in each of these provinces were selected as metropolitan areas</p>
Monthly percentage change	<p>The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.</p>
Weights	<p>The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.</p>

FOR MORE INFORMATION

Stats SA publishes approximately 400 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Advance release calendar

An advance release calendar is disseminated on <http://www.statssa.gov.za>

Stats SA products

A complete set of Stats SA publications is available in the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8095.
