**EXECUTIVE SUMMARY**

**KEY FIGURES AT SEPTEMBER 2006**

Main indices	Indices (2000=100)			Percentage change between	
	September 2005	August 2006	September 2006	August 2006 and September 2006	September 2005 and September 2006
				Actual %	Actual %
CPI (historical metropolitan areas)	129,5	136,0	136,3	+ 0,2	+ 5,3
CPI excluding interest rates on mortgage bonds (CPIX) (historical metropolitan and other urban areas)	136,4	142,9	143,3	+ 0,3	+ 5,1

**KEY FINDINGS AT SEPTEMBER 2006**

The headline inflation rate at September 2006 (i.e. the Consumer Price Index for the historical metropolitan areas at September 2006 compared with that at September 2005) is 5,3%

*The official inflation rate (i.e. the percentage change in the CPI for the historical metropolitan areas at September 2006 compared with that at September 2005) is 5,3% at September 2006. This rate is 0,1 of a percentage point lower than the corresponding annual rate of 5,4% at August 2006 (i.e. the percentage change in the CPI for the historical metropolitan areas at August 2006 compared with that at August 2005) (see table 2.1, p.15). This lower annual rate at September 2006 compared with that at August 2006 could be explained by a decrease in the annual rate of change for:*

- *The CPI for transport for which the rate decreased from 9,1% at August 2006 to a lower rate of 4,8% at September 2006.*

*However, this decrease was partially counteracted by increases in the annual rates of change for:*

- *The CPI for food for which the rate increased from 8,0% at August 2006 to a higher rate of 8,5% at September 2006.*
- *The CPI for fuel and power for which the rate increased from 6,5% at August 2006 to a higher rate of 7,9% at September 2006.*
- *The CPI for household operation for which the rate increased from – 2,7% at August 2006 to a higher rate of 1,5% at September 2006.*
- *The CPI for furniture and equipment for which the rate increased from – 1,0% at August 2006 to a higher rate of – 0,3% at September 2006.*

*From August 2006 to September 2006 the Consumer Price Index for the historical metropolitan areas increased by 0,2%.*

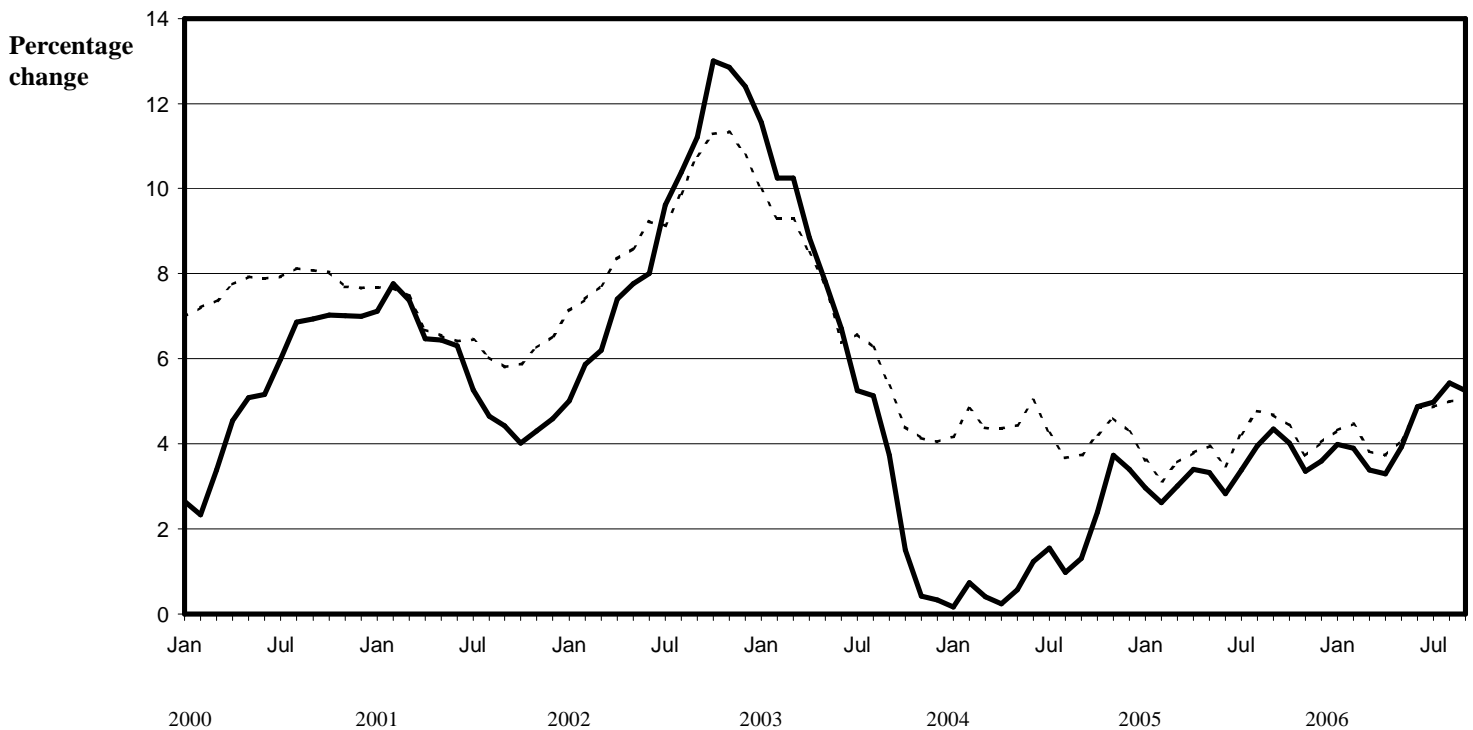

The annual increase of 5,3% in the Consumer Price Index for the historical metropolitan areas is mainly due to relatively large annual contributions in the price indices for food (+ 1,9 percentage points), housing (+ 1,2 percentage points), transport (+ 0,8 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3, p.16).

**The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan and other urban areas is 5,1% at September 2006 (i.e. the CPIX at September 2006 compared with that at September 2005)**

The annual percentage change in the CPIX, which is the Consumer Price Index excluding interest rates on mortgage bonds, for the historical metropolitan and other urban areas is 5,1% at September 2006 (i.e. the CPIX at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point higher than the corresponding annual rate of 5,0% at August 2006 (see table 2.2, p.15). From August 2006 to September 2006 the CPIX for the historical metropolitan and other urban areas increased by 0,3%.

The annual increase of 5,1% in the CPIX for the historical metropolitan and other urban areas is mainly due to relatively large annual contributions in the price indices for food (+ 2,0 percentage points), transport (+ 0,7 of a percentage point), housing, excluding interest rates on mortgage bonds (+ 0,6 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), education (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point) and household operation (+ 0,2 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 9, p.17).

**Administered and regulated prices**

The CPI for administered prices at September 2006 (i.e. the CPI for administered prices for the historical metropolitan areas at September 2006 compared with that at September 2005) is 6,9%. This rate is 2,9 percentage points lower than the corresponding annual rate of 9,8% at August 2006. The annual increase of 6,9% at September 2006 is mainly due to relatively large annual contributions in the price indices for petrol (+ 3,5 percentage points), electricity (+ 1,1 percentage points), school fees (+ 1,0 percentage point), water tariffs (+ 0,6 of a percentage point), tertiary fees (+ 0,5 of a percentage point) and assessment rates (+ 0,5 of a percentage point). These annual increases were slightly counteracted by annual decreases in the price indices for telephone call rates (- 0,1 of a percentage point), cell phone call rates (- 0,1 of a percentage point) and public hospitals (- 0,1 of a percentage point) (see table 1, p.14).

The CPIX for administered prices at September 2006 (i.e. the CPIX for administered prices for the historical metropolitan and other urban areas at September 2006 compared with that at September 2005) is 6,7%. This rate is 2,2 percentage points lower than the corresponding annual rate of 8,9% at August 2006. The annual increase of 6,7% at September 2006 is mainly due to relatively large annual contributions in the price indices for petrol (+ 2,9 percentage points), electricity (+ 1,0 percentage point), school fees (+ 1,0 percentage point), water tariffs (+ 0,7 of a percentage point), assessment rates (+ 0,6 of a percentage point) and tertiary fees (+ 0,5 of a percentage point). These annual increases were slightly counteracted by annual decreases in the price indices for telephone call rates (- 0,1 of a percentage point), cell phone call rates (- 0,1 of a percentage point), public hospitals (- 0,1 of a percentage point) and trains (- 0,1 of a percentage point) (see table 1, p.14).

**NOTE****CPI FOR OCTOBER 2006**

No additional surveys will be conducted in October 2006.

**HISTORICAL METROPOLITAN AREAS**

**KEY FIGURES AT SEPTEMBER 2006**

**Table A – Consumer Price Index (CPI) and the inflation rate for the historical metropolitan areas according to main indices**

Main indices	Indices (2000=100)			Percentage change between	
	September 2005	August 2006	September 2006	August 2006 and September 2006	September 2005 and September 2006
				Actual %	Actual %
CPI	129,5	136,0	136,3	+ 0,2	+ 5,3
CPI excluding interest rates on mortgage bonds (CPIX)	137,1	143,7	144,0	+ 0,2	+ 5,0
Core index	136,8	141,7	142,0	+ 0,2	+ 3,8
Food price index	138,4	148,4	150,2	+ 1,2	+ 8,5
CPI excluding food price index	127,5	133,1	133,0	- 0,1	+ 4,3
CPI excluding Value Added Tax (VAT)	129,5	136,0	136,3	+ 0,2	+ 5,3

**KEY FINDINGS AT SEPTEMBER 2006**

The headline inflation rate at September 2006 (i.e. the Consumer Price Index for the historical metropolitan areas at September 2006 compared with that at September 2005) is 5,3%

*The official inflation rate (i.e. the percentage change in the CPI for the historical metropolitan areas at September 2006 compared with that at September 2005) is 5,3% at September 2006. This rate is 0,1 of a percentage point lower than the corresponding annual rate of 5,4% at August 2006 (i.e. the percentage change in the CPI for the historical metropolitan areas at August 2006 compared with that at August 2005) (see table 2.1, p.15). This lower annual rate at September 2006 compared with that at August 2006 could be explained by a decrease in the annual rate of change for:*

- *The CPI for transport for which the rate decreased from 9,1% at August 2006 to a lower rate of 4,8% at September 2006.*

*However, this decrease was partially counteracted by increases in the annual rates of change for:*

- *The CPI for food for which the rate increased from 8,0% at August 2006 to a higher rate of 8,5% at September 2006.*
- *The CPI for fuel and power for which the rate increased from 6,5% at August 2006 to a higher rate of 7,9% at September 2006.*
- *The CPI for household operation for which the rate increased from – 2,7% at August 2006 to a higher rate of 1,5% at September 2006.*
- *The CPI for furniture and equipment for which the rate increased from – 1,0% at August 2006 to a higher rate of – 0,3% at September 2006.*

*From August 2006 to September 2006 the Consumer Price Index for the historical metropolitan areas increased by 0,2%.*

The annual increase of 5,3% in the Consumer Price Index for the historical metropolitan areas is mainly due to relatively large annual contributions in the price indices for food (+ 1,9 percentage points), housing (+ 1,2 percentage points), transport (+ 0,8 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 3, p.16).

From August 2006 to September 2006 the Consumer Price Index for the historical metropolitan areas increased by 0,2%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and household operation (+ 0,2 of a percentage point). These monthly increases were partially counteracted by a monthly decrease in the price index for transport (- 0,3 of a percentage point, mainly due to a 36c/l decrease in the price of petrol) (see table 4, p.16).

**Annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan areas is 5,0% at September 2006 (i.e. the percentage change in the CPIX at September 2006 compared with that at September 2005)**

*The annual percentage change in the CPIX for the historical metropolitan areas is 5,0% at September 2006 (i.e. the percentage change in the CPIX at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point lower than the corresponding annual rate of 5,1% at August 2006 (i.e. the percentage change in the CPIX for the historical metropolitan areas at August 2006 compared with that at August 2005). From August 2006 to September 2006 the CPIX for the historical metropolitan areas increased by 0,2%.*

The annual increase of 5,0% in the CPIX for the historical metropolitan areas is mainly due to relatively large annual contributions in the price indices for food (+ 2,0 percentage points), transport (+ 0,9 of a percentage point), housing excluding interest rates on mortgage bonds (+ 0,6 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 7, p.17).

From August 2006 to September 2006 the CPIX for the historical metropolitan areas increased by 0,2%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and household operation (+ 0,2 of a percentage point). These monthly increases were partially counteracted by a monthly decrease in the price index for transport (- 0,3 of a percentage point, mainly due to a 36c/l decrease in the price of petrol) (see table 8, p.17).

#### **Core inflation rate**

*The core inflation rate for the historical metropolitan areas (see explanatory notes 33, 34 and 35 on page 34) is 3,8% at September 2006 (i.e. the core index at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point lower than the corresponding annual rate of 3,9% at August 2006. From August 2006 to September 2006 the core index for the historical metropolitan areas increased by 0,2%.*

The annual increase of 3,8% in the core index for the historical metropolitan areas is mainly due to relatively large annual contributions in the price indices for transport (+ 1,4 percentage points), housing (+ 0,6 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), food (+ 0,4 of a percentage point), fuel and power (+ 0,4 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point) and cigarettes, cigars and tobacco (+ 0,2 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 11, p.18).

From August 2006 to September 2006 the core index for the historical metropolitan areas increased by 0,2%. This monthly increase was due to monthly contributions in the price indices for food (+ 0,1 of a percentage point) and personal care (+ 0,1 of a percentage point) (see table 12, p.18).

#### **Food inflation**

*The price index for food reflects an annual rate of increase of 8,5% at September 2006 (i.e. the CPI for food at September 2006 compared with that at September 2005). This rate is 0,5 of a percentage point higher than the corresponding annual rate of 8,0% at August 2006. From August 2006 to September 2006 this index increased by 1,2%.*

Annual increases occurred in the price indices for meat (+ 18,5%), fish and other seafood (+ 14,0%), sugar (+ 7,6%), vegetables (+ 7,1%), grain products (+ 6,4%), fats and oils (+ 4,7%), milk, cheese and eggs (+ 3,3%), "other" food products (+ 2,2%), fruit and nuts (+ 1,8%) and coffee, tea and cocoa (+ 1,5%) (see table 15, p.19).

Monthly increases occurred in the price indices for fats and oils (+ 3,6%), meat (+ 2,5%), grain products (+ 1,5%), coffee, tea and cocoa (+ 1,0%), fish and other seafood (+ 0,7%), "other" food products (+ 0,4%), milk, cheese and eggs (+ 0,3%) and vegetables (+ 0,1%). These monthly increases were slightly counteracted by monthly decreases in the price indices for sugar (- 1,0%) and fruit and nuts (- 0,2%) (see table 15, p.19).

### **CPI excluding food**

*The price index for non-food items shows an annual rate of change of 4,3% at September 2006 (i.e. the CPI excluding food at September 2006 compared with that at September 2005). This rate is 0,3 of a percentage point lower than the corresponding annual rate of 4,6% at August 2006. From August 2006 to September 2006 this index decreased by 0,1%.*

Annual increases occurred in the price indices for cigarettes, cigars and tobacco (+ 8,5%), alcoholic beverages (+ 8,4%), fuel and power (+ 7,9%), education (+ 7,0%), housing (+ 6,0%), medical care and health expenses (+ 6,0%), transport (+ 4,8%), non-alcoholic beverages (+ 3,9%), reading matter (+ 3,6%), personal care (+ 2,5%), "other" products (+ 1,8%), household operation (+ 1,5%) and recreation and entertainment (+ 1,0%). These annual increases were slightly counteracted by annual decreases in the price indices for clothing and footwear (- 9,8%), furniture and equipment (- 0,3%) and communication (- 0,2%) (see table 15, p.19).

Relatively large monthly decreases occurred in the price indices for transport (- 2,1%, mainly due to a 36c/l decrease in the price of petrol), fuel and power (- 0,9 of a percentage point), non-alcoholic beverages (- 0,8%), clothing and footwear (- 0,4%) and recreation and entertainment (- 0,1%). These monthly decreases were slightly counteracted by monthly increases in the price indices for and household operation (+ 4,2%), personal care (+ 0,9%) and furniture and equipment (+ 0,4%) (see table 15, p.19).

### **An alternative expression of the change in the Consumer Price Index**

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to September 2006 and the average index of the previous three months. This approach, when using unadjusted data shows an increase of 9,6% (which is 0,3 percentages points higher than the corresponding rate of 9,3% for August 2006).

### **Pensioners**

The annual inflation rate for pensioners in the historical metropolitan areas is 5,5% at September 2006 (i.e. the CPI for pensioners at September 2006 compared with that at September 2005), which is 0,1 of a percentage point higher than the corresponding annual rate of 5,4% at August 2006 (see table 25, p.29).

**HISTORICAL METROPOLITAN AND OTHER URBAN AREAS**

**KEY FIGURES AT SEPTEMBER 2006**

**Table B – Consumer Price Index (CPI) and the inflation rate for the historical metropolitan and other urban areas according to main indices**

Main indices	Indices (2000=100)			Percentage change between	
	September 2005	August 2006	September 2006	August 2006 and September 2006	September 2005 and September 2006
				Actual %	Actual %
CPI	129,8	136,3	136,6	+ 0,2	+ 5,2
CPI excluding interest rates on mortgage bonds (CPIX)	136,4	142,9	143,3	+ 0,3	+ 5,1
Core index	135,9	140,7	141,0	+ 0,2	+ 3,8
Food price index	138,8	148,0	149,8	+ 1,2	+ 7,9
CPI excluding food price index	127,5	133,2	133,2	0,0	+ 4,5
CPI excluding Value Added Tax (VAT)	129,8	136,3	136,6	+ 0,2	+ 5,2

**KEY FINDINGS AT SEPTEMBER 2006**

Inflation rate for the historical metropolitan and other urban areas is 5,2% at September 2006 (i.e. the CPI at September 2006 compared with that at September 2005)

*The inflation rate for the historical metropolitan and other urban areas is 5,2% at September 2006 (i.e. the CPI at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point lower than the corresponding annual rate of 5,3% at August 2006. This lower annual rate at September 2006 compared with that at August 2006 could be explained by decreases in the annual rates of change for:*

- *The CPI for transport for which the rate decreased from 8,7% at August 2006 to a lower rate of 4,7% at September 2006.*
- *The CPI for clothing and footwear for which the rate decreased from – 7,9% at August 2006 to a lower rate of – 8,6% at September 2006.*
- 

*However, these decreases were partially counteracted by increases in the annual rates of change for:*

- *The CPI for food for which the rate increased from 7,2% at August 2006 to a higher rate of 7,9% at September 2006.*
- *The CPI for fuel and power for which the rate increased from 5,1% at August 2006 to a higher rate of 7,2% at September 2006.*
- *The CPI for household operation for which the rate increased from – 0,4% at August 2006 to a higher rate of 4,1% at September 2006.*
- *The CPI for furniture and equipment for which the rate increased from – 1,5% at August 2006 to a higher rate of – 1,0% at September 2006.*

***From August 2006 to September 2006 the Consumer Price Index for the historical metropolitan and other urban areas increased by 0,2%.***

The annual increase of 5,2% in the Consumer Price Index for the historical metropolitan and other urban areas is mainly due to relatively large annual contributions in the price indices for food (+ 1,9 percentage points), housing (+ 1,1 percentage points), transport (+ 0,7 of a percentage point), medical care and health expenses (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point) and education (+ 0,3 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 5, p.16).

From August 2006 to September 2006 the Consumer Price Index for the historical metropolitan and other urban areas increased by 0,2%. This monthly increase is due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and household operation (+ 0,2 of a percentage point). These monthly increases were partially counteracted by a monthly decrease in the price index for transport (- 0,3 of a percentage point, mainly due to a 36c/l decrease in the price of petrol) (see table 6, p.16).

**The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the historical metropolitan and other urban areas is 5,1% at September 2006 (i.e. the CPIX at September 2006 compared with that at September 2005)**

***The annual percentage change in the CPIX, which is the Consumer Price Index excluding interest rates on mortgage bonds, for the historical metropolitan and other urban areas is 5,1% at September 2006 (i.e. the CPIX at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point higher than the corresponding annual rate of 5,0% at August 2006 (see table 2.2, p.15). From August 2006 to September 2006 the CPIX for the historical metropolitan and other urban areas increased by 0,3%.***

The annual increase of 5,1% in the CPIX for the historical metropolitan and other urban areas is mainly due to relatively large annual contributions in the price indices for food (+ 2,0 percentage points), transport (+ 0,7 of a percentage point), housing, excluding interest rates on mortgage bonds (+ 0,6 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), education (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point) and household operation (+ 0,2 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 9, p.17).

From August 2006 to September 2006 the CPIX for the historical metropolitan and other urban areas increased by 0,3%. This monthly increase is due to monthly contributions in the price indices for food (+ 0,3 of a percentage point) and household operation (+ 0,3 of a percentage point). These monthly increases were partially counteracted by a monthly decrease in the price index for transport (- 0,3 of a percentage point, mainly due to a 36c/l decrease in the price of petrol) (see table 6, p.16).

### **Core inflation rate**

***The core inflation rate for the historical metropolitan and other urban areas (see explanatory notes 33, 34 and 35 on page 34) is 3,8% at September 2006 (i.e. the core index at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point higher than the corresponding annual rate of 3,7% at August 2006. From August 2006 to September 2006 the core index for the historical metropolitan and other urban areas index increased by 0,2%.***

The annual increase of 3,8% in the core index for the historical metropolitan and other urban areas is mainly due to relatively large annual contributions in the price indices for transport (+ 1,3 percentage points), medical care and health expenses (+ 0,6 of a percentage point), housing (+ 0,5 of a percentage point), food (+ 0,4 of a percentage point) and fuel and power (+ 0,4 of a percentage point). These annual increases were slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,2 of a percentage point) (see table 13, p.18).

From August 2006 to September 2006 the core index for the historical metropolitan and other urban areas increased by 0,2%. This monthly increase is due to monthly contributions in the price indices for food (+ 0,1 of a percentage point) and personal care (+ 0,1 of a percentage point) (see table 14, p.18).

### **Food inflation**

***The price index for food reflects an annual rate of increase of 7,9% at September 2006 (i.e. the CPI for food at September 2006 compared with that at September 2005). This rate is 0,7 of a percentage point higher than the corresponding annual rate of 7,2% at August 2006. From August 2006 to September 2006 this index increased by 1,2%.***

Annual increases occurred in the price indices for meat (+ 17,1%), fish and other seafood (+ 13,7%), sugar (+ 7,7%), vegetables (+ 6,4%), fruit and nuts (+ 4,9%), grain products (+ 4,7%), fats and oils (+ 4,7%), coffee, tea and cocoa (+ 2,7%), milk, cheese and eggs (+ 2,4%) and "other" food products (+ 2,1%) (see table 16, p.20).

Monthly increases occurred in the price indices for fats and oils (+ 3,2%), meat (+ 2,3%), coffee, tea and cocoa (+ 1,2%), fish and other seafood (+ 1,1%), grain products (+ 0,8%), "other" food products (+ 0,6%), vegetables (+ 0,5%), fruit and nuts (+ 0,3%) and milk cheese and eggs (+ 0,2%). These monthly increases were slightly counteracted by a monthly decrease in the price index for sugar (- 0,6%) (see table 16, p.20).

### **CPI excluding food**

*The price index for non-food items reflects an annual rate of change of 4,5% at September 2006 (i.e. the CPI excluding food index at September 2006 compared with that at September 2005). This rate is 0,1 of a percentage point lower than the corresponding annual rate of 4,6% at August 2006. From August 2006 to September 2006 this index remained unchanged.*

Annual increases occurred in the price indices for cigarettes, cigars and tobacco (+ 9,3%), alcoholic beverages (+ 8,0%), fuel and power (+ 7,2%), education (+ 7,0%), housing (+ 6,1%), medical care and health expenses (+ 6,0%), transport (+ 4,7%), household operation (+ 4,1%), non-alcoholic beverages (+ 3,8%), reading matter (+ 3,4%), personal care (+ 2,9%), "other" products (+ 2,1%) and recreation and entertainment (+ 0,8%). These annual increases were slightly counteracted by annual decreases in the price indices for clothing and footwear (- 8,6%), furniture and equipment (- 1,0%) and communication (- 0,2%) (see table 16, p.20).

Relatively large monthly increases occurred in the price indices for household operation (+4,6%), personal care (+ 0,7%) and cigarettes, cigars and tobacco (+ 0,3%). These monthly increases were slightly counteracted by monthly decreases in the price indices for transport (- 2,0%, mainly due to a 36c/l decrease in the price of petrol), fuel and power (- 1,3%), non-alcoholic beverages (- 0,8%) and clothing and footwear (- 0,6%) (see table 16, p.20).

### **An alternative expression of the change in the Consumer Price Index**

An alternative expression of the change in the Consumer Price Index is to annualise the percentage change between the average index of the three months up to September 2006 and the average index of the previous three months. This approach, when using the unadjusted data shows an increase of 9,2% (which is 0,2 of a percentage point higher than the corresponding rate of 9,0% for August 2006).

### **Area indices**

The Port Elizabeth/Uitenhage area recorded the highest annual inflation rate of 7,2%, while the lowest annual inflation rate of 4,5% was recorded for the North West Province (see table 21, p.25).

Regarding food prices, the highest annual inflation rate of 12,2% was recorded for the Free State Goldfields areas, while the North West Province recorded the lowest annual rate of change of 5,2% (see table 22, p.26).

### **Pensioners**

The Free State Goldfields area recorded the highest annual rate of increase of 7,6%, while the lowest annual rate of change of 4,2% was recorded for the North West Province (see table 25, p.29).

**NOTES**

<b>Forthcoming issues</b>	<b>Issue</b>	<b>Expected date for publication</b>
	October 2006	29 November 2006
	November 2006	20 December 2006
	December 2006	24 January 2007
	January 2007	21 February 2007
	February 2007	28 March 2007
	March 2007	25 April 2007

**Purpose of the survey** The Survey of Consumer Prices is a monthly survey covering a sample of retailers operating in the South African economy. The results of the survey are used to compile the Consumer Price Index (CPI), an economic indicator, which indicates the changes in the prices of consumer goods and services. The annual percentage change in the Consumer Price Index indicates the inflation rate. These statistics are used by the private sector in the analysis of comparative business performance, as well as for contract price adjustments. It is also used in the determination of economic and social policy.

**Rebasing the CPI from 1995=100 to 2000=100** Following international practice, the base year of the Consumer Price Index (CPI) has been changed from 1995=100 to 2000=100 with effect from February 2001.

**Updating the CPI basket** The weighting system for the CPI is calculated, as from January 2002, from the Survey of Income and Expenditure of Households, which was conducted in October 2000. For more information on the detailed weights, see statistical releases P0141.5.

**CPIX** In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds (CPIX). Stats SA has accordingly calculated these measures and the CPIX, is included in this release (see table 2.2, p.15).

Stats SA releases detailed figures on the CPIX (see tables 17 and 18 on pages 21 and 22). The detailed figures were introduced and published as from February 2000.

**Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF)** South Africa’s data dissemination practices are assessed against the IMF’s Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF’s Dissemination Standards Bulletin Board on the internet at <http://dsbb.imf.org>. This is a “best practice” standard. It covers four sectors of the economy i.e. the real, fiscal, financial and external sectors, as well as population and identifies four dimensions i.e. data, access, integrity and quality, of data dissemination. For each of these dimensions, the SDDS prescribes two to four monitorable elements or good practices that can be observed, or monitored, by users of statistics. However, the IMF’s monitoring of the SDDS as authorised by the IMF’s Board of Executive Directors is limited to the dimensions of data i.e. coverage, periodicity and timeliness, and access i.e. advanced release calendar. It should also be noted that the SDDS is a disclosure standard, i.e. it focuses on encouraging the authorities to provide information to users, including information that will enable users to assess the data.

The four institutions responsible for the compilation and dissemination of the SDDS prescribed data categories are National Treasury, the South African Revenue Services (SARS), the South African Reserve Bank (SARB) and Statistics South Africa (Stats SA).

National Treasury is responsible for compiling and disseminating data on the national budget (budgetary central government operations). SARS is responsible for compiling and disseminating of data on international merchandise trade.

The SARB is responsible for compiling and disseminating analytical accounts of the banking sector, the analytical accounts of the central bank, central government debt, interest rate, exchange rates, share price indices, balance of payments, the international investment position, international reserves and foreign currency liquidity.

Stats SA is responsible for compiling and disseminating data on the production index, national accounts, government accounts, industry based statistics, social statistics, the production price index, consumer price index, labour market and population statistics.

South Africa has subscribed to the SDDS since 2 August 1996 and started posting its metadata on 27 September 1996. South Africa met the SDDS specifications for the coverage, periodicity and timeliness of the data, and for the dissemination of advanced release calendars on 18 September 2000. The National Summary Data Page has been hyperlinked since 24 April 1997 and the Data Template on International Reserves and Foreign Currency Liquidity was disseminated on 1 September 2000.

South Africa is the only subscriber to the SDDS from the African continent.

**Reports on  
Observance of  
Standards and  
Codes (ROSC) of  
the International  
Monetary Fund  
(IMF)**

The IMF has been working actively on producing Reports on Observance of Standards and Codes (ROSC) as a step to strengthen the architecture of the international financial system. The objectives of the ROSC include the promotion of increased transparency and encouragement of implementation of internationally accepted standards and codes. One of the ROSC components is the data dissemination module, which falls under the responsibility of the IMF's Statistics Department (STA). In this module, a country is assessed according to the SDDS.

The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for these categories. It is complemented by an assessment of the quality of the Consumer Price Index, using the Data Quality Assessment Framework (DQAF) developed by the IMF's Statistics Department.

The DQAF undertakes to assess data quality under the following dimensions –

- Prerequisites of quality;
- Integrity;
- Methodological soundness;
- Accuracy and reliability;
- Serviceability; and
- Accessibility

An IMF delegation visited South Africa from 7 to 18 May 2001 and produced a data ROSC for South Africa. This ROSC indicates to which extent South Africa has observed the IMF's requirements and is available at <http://www.imf.org/external/np/rosc/rosc.asp>

Table 1 - Expenditure group and area indices of the Consumer Price Index and percentage change

Expenditure group/Area indices	Indices (2000=100)			Percentage change between	
	Sep 2005	Aug 2006	Sep 2006	Aug 2006 and Sep 2006	Sep 2005 and Sep 2006
				Actual %	Actual %
Expenditure group indices					
Very low expenditure	134,8	143,5	144,7	+0,8	+7,3
Low expenditure	135,2	142,8	143,8	+0,7	+6,4

**EXPLANATORY NOTES**

- Introduction**     **1**     This publication contains results of the monthly Survey of Consumer (Retail) Prices. The results of the survey are used to compile the Consumer Price Index (CPI), an economic indicator, which indicates the changes in the prices of consumer goods and services. The annual percentage change in the Consumer Price Index indicates the inflation rate. These statistics are used by the private sector in the analysis of comparative business performance, as well as for contract price adjustments. It is also used in the determination of economic and social policy.
- 2**     The indices are classified according to the International Trade Classification (as indicated in tables 1 to 18) and geographical areas (as indicated in tables 21 to 25). Due to a new international classification system, prescribed by the 1993 System of National Accounts (SNA revision IV, 1993), compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, the Classification of Individual Consumption by Purpose (COICOP), Stats SA decided to classify the price information collected according to this new classification system, alongside the existing classification system. The information contained in tables 19 and 20 is classified according to COICOP. The indices are calculated on the base 2000=100.
- 3**     The Consumer Price Index (CPI) is a series of figures (numbers) showing how the average price level of all those goods and services (basket of goods and services) bought by a typical consumer or household changes over time. The inflation rate is the annual percentage change in the CPI.
- Survey of Income and Expenditure of Households (IES)**     **4**     Stats SA conducts a Survey of Income and Expenditure of Households every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain details on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa.
- 5**     Every five years the results from this survey are used to identify the goods and services bought by a typical consumer or household and which should be included in the basket of goods and services used to monitor price changes.
- 6**     Furthermore, every five years the results from the Survey of Income and Expenditure of Households are used to determine the weights of the products/groups (indicator products) in the basket. The weights of a specific product/group is calculated by dividing the total amount spent by all households in South Africa on the specific product/group by the total amount spent on all goods and services by all households.
- 2000 Survey of Income and Expenditure of Households**     **7**     Stats SA conducted the five-yearly Survey of Income and Expenditure of Households in October 2000 covering a sample of 30 000 households. The information obtained through this survey was weighted according to the 1996 Population Census figures in order to represent all households in South Africa.
- 8**     The 2000 Survey of Income and Expenditure of Households collected information regarding approximately 1 000 different goods and services groups. Stats SA made a further breakdown of these groups using supplementary sources. This process led to a list of approximately 1 500 groups on which the current calculation of the CPI is based.
- 9**     Based on the above-mentioned information for 2000 (see paragraphs 7 and 8), the new weight for a specific product/group was calculated by dividing total expenditure by all households in South Africa on the specific product/group by total expenditure on all goods and services by all households in South Africa. Stats SA implemented the new weights, i.e. the 2000 weights based on the 2000 Survey of Income and Expenditure of Households, as from the January 2002 CPI publication.
- Basket of goods and services**     **10**     The current CPI basket covers approximately 1 500 goods and services.

- 11 These goods and services are grouped according to the International Trade Classification into 17 main groups -
- Food;
  - Non-alcoholic beverages;
  - Alcoholic beverages;
  - Cigarettes, cigars and tobacco;
  - Clothing and Footwear;
  - Housing;
  - Fuel and power;
  - Furniture and equipment;
  - Household operation;
  - Medical care and health expenses;
  - Transport;
  - Communication;
  - Recreation and entertainment;
  - Reading matter;
  - Education;
  - Personal care; and
  - Other.
- 12 These goods and services are grouped according to an alternative classification, i.e. the COICOP classification, into nine main groups –
- Food, beverages and tobacco;
  - Clothing and Footwear;
  - Housing, water, electricity, gas and other fuels;
  - Furnishings, household equipment and routine maintenance of the house;
  - Health;
  - Transport;
  - Leisure, entertainment and culture;
  - Education; and
  - Miscellaneous goods and services.
- Weighting basis** 13 The CPI is a fixed weights index, which implies that the weight of each product/group stays the same for the five year period until the results of the next Survey of Income and Expenditure of Households become available.
- Expenditure groups** 14 Five expenditure group categories or quintiles are defined according to total annual expenditure per household as at October of the year of the Survey of Income and Expenditure of Households. The five expenditure group categories used in this publication were defined according to total annual expenditure per household as at October 2000. These categories are as follows –
- very low expenditure group – up to R8 070;
  - low expenditure group R8 071 up to R12 263;
  - middle expenditure group R12 264 up to R24 365;
  - high expenditure group R24 366 up to R55 159; and
  - very high expenditure group – R55 160 and more.
- Scope of the CPI survey** 15 The Survey of Retail Prices is a retail trade and service outlets sample survey covering prices of selected consumer goods and services sold by these retail trade and service outlets to consumers in the 12 metropolitan and 22 other urban areas in the nine provinces. The results of the survey are used to compile the Consumer Price Index, an economic indicator.
- 16 Prices of goods and services included in the CPI are collected during the first three weeks of the month. Although these prices are generally collected monthly (see list of items in paragraph 17), the prices of some items are collected quarterly (see list of items in paragraph 18), six monthly or annually (see list of items in paragraph 19). The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices are about to change, these prices will be collected, even if it is not according to the normal collection schedule.

17 Prices of items/products collected monthly:

- Bread.
- Meat.
- Milk.
- Vegetables and fruit.
- Other groceries.
- Alcoholic beverages.
- Sweets, non-alcoholic beverages, ice-cream and tobacco products.
- Clothing and footwear.
- Repairs of clothing, footwear and furniture.
- Interest rates on mortgage bonds.
- Coal and wood.
- New vehicles, repairs and services.
- Motor spare parts and accessories.
- Petrol.
- Newspapers and magazines.
- Entrance fees – drive inns and bioscopes.
- Air transport fees.
- Cellular phone tariffs.
- Furniture and equipment.
- Medicine.
- Garden tools.
- Washing ironing and dry-cleaning.
- Sport equipment.
- Reading matter and stationery.
- Tariffs of hairdressing services.
- Ironware and crockery.
- New and retread tyres.
- Household textiles.
- Electrical appliances and equipment.
- Medical, toilet and photographic requisites and services.
- Musical instruments.
- Prices of pets.

18 Prices of items/products collected quarterly:

Items/products	Months of survey
<ul style="list-style-type: none"> <li>• Rent of dwellings.</li> </ul>	<ul style="list-style-type: none"> <li>• January, April, July and October.</li> </ul>
<ul style="list-style-type: none"> <li>• Motor vehicle insurance.</li> <li>• Public transport tariffs.</li> </ul>	<ul style="list-style-type: none"> <li>• March, June, September and December.</li> </ul>

19 Prices of items/products collected annually:

Items/products	Month of survey
<ul style="list-style-type: none"> <li>• Doctor’s and dentist’s fees.</li> <li>• Motor vehicle license and registration fees.</li> <li>• Telephone (land lines).</li> </ul>	<ul style="list-style-type: none"> <li>• January.</li> </ul>
<ul style="list-style-type: none"> <li>• Toll-fees at toll-gates.</li> <li>• School funds.</li> <li>• University boarding and class fees.</li> </ul>	<ul style="list-style-type: none"> <li>• March.</li> </ul>
<ul style="list-style-type: none"> <li>• Parking fees.</li> <li>• Postal tariffs.</li> </ul>	<ul style="list-style-type: none"> <li>• April.</li> </ul>
<ul style="list-style-type: none"> <li>• Property taxes.</li> <li>• Refuse removal.</li> <li>• Sanitary fees.</li> </ul>	<ul style="list-style-type: none"> <li>• July.</li> </ul>
<ul style="list-style-type: none"> <li>• Maintenance of graves.</li> </ul>	<ul style="list-style-type: none"> <li>• October.</li> </ul>

20 Prices of items/products collected at other times of the year:

Items/products	Months of survey
<ul style="list-style-type: none"> <li>• Contribution to medical aid.</li> </ul>	<ul style="list-style-type: none"> <li>• January.</li> </ul>
<ul style="list-style-type: none"> <li>• Property insurance.</li> <li>• Hospital fees.</li> </ul>	<ul style="list-style-type: none"> <li>• January and July.</li> </ul>
<ul style="list-style-type: none"> <li>• Water.</li> <li>• Electricity.</li> </ul>	<ul style="list-style-type: none"> <li>• January, July and August.</li> </ul>
<ul style="list-style-type: none"> <li>• Domestic workers.</li> </ul>	<ul style="list-style-type: none"> <li>• February, September.</li> </ul>
<ul style="list-style-type: none"> <li>• Television licenses.</li> </ul>	<ul style="list-style-type: none"> <li>• April, October.</li> </ul>

- Classification**    21    The International Trade Classification (ITC) was used to classify the products and services contained in the basket of goods and services.
- 22    A further classification of the products and services in the basket of goods and services, in line with international practices, was done according to the Classification of Individual Consumption by Purpose (COICOP). The indices according to this classification are published in tables 19 and 20.
- Statistical unit**    23    The statistical unit is the department (e.g food department, hardware department, clothing department) of the retail trade and service establishments (branches). The establishment is the smallest economic unit that functions as a separate entity. Information is obtained from the different departments in each establishment. Each department in the establishment is classified according to the classification of the products that the department sells, which is then classified according to ITC as well as COICOP.
- Survey methodology and design**    24    Different phases of sampling takes place. Firstly, a sample of goods and services, based on the information collected through the Survey of Income and Expenditure of Households, is designed and selected. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large quantity, at least 0,01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- 25    Secondly, a geographical sample for price collection is designed and selected. Currently 12 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The “other urban areas” are covered by nine provincial samples of two to three urban areas each, depending on the population size of the area. Therefore, a total of 22 “other urban areas” is sampled.
- 26    Thirdly, for each of the 34 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources, mainly the business register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from department stores, as well as specialist shops. The sample of outlets is revised every five years when the weights are revised.
- 27    Currently, an average of 105 000 price quotations are collected each month from approximately 2 100 outlets. The indices are based on retail trade and service prices.
- Pricing basis**    28    Price information refers to the first three weeks of the month. **The prices of all items include VAT.**
- Processing of price information**    29    The prices that are quoted for the different products/services are edited to ensure that it is price comparable with the prices received for the same products in the previous month. If the price information difference between successive periods are outside the specified range, the current price levels are confirmed.
- Calculating product price indices**    30    Price relatives are calculated for each product per respondent by dividing the current price by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then multiplied with the product index for the previous month in order to obtain a product index for the relevant month.

<b>Calculating group price indices</b>	<b>31</b>	Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using the Laspeyres formula.
<b>Contributions of specific items to the total CPI</b>	<b>32</b>	The monthly (annual) contribution of a specific item or group of items to the total CPI is calculated by multiplying the weight of this item or group of items with the monthly (annual) change in the index for this item or group of items, divided by the index for 'All items'.
<b>Core index</b>	<b>33</b>	The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, the core index is derived by excluding items from the CPI basket on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.
	<b>34</b>	Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows – <ul style="list-style-type: none"> <li>• Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.</li> <li>• Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.</li> <li>• Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate.</li> <li>• Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).</li> <li>• Assessment rates: These taxes are predominantly determined by local government.</li> </ul>
	<b>35</b>	The choice of exclusions was informed by best practice amongst several other international agencies, and after consultation with the South African Reserve Bank and other local technical experts.
<b>CPI excluding interest rates on mortgage bonds (CPIX)</b>	<b>36</b>	In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, the Core index excluding petrol and the CPIX. Stats SA has accordingly calculated these measures and only the CPIX and the Core index are included in this release (see table 1 on page 14).
<b>CPI for administered prices</b>	<b>37</b>	An administered price can be defined as the price of a product, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies/institutions without reference to market forces.
	<b>38</b>	Basket of administered prices: <ul style="list-style-type: none"> <li>▪ Housing (sanitary fees, refuse removal, assessment rates, water and university boarding fees);</li> <li>▪ Fuel and power (electricity and paraffin);</li> <li>▪ Medical care (public hospital);</li> <li>▪ Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls);</li> <li>▪ Education (school fees and tertiary fees);</li> <li>▪ Transport (petrol, public transport – municipal buses and trains, motor licenses and registration); and</li> <li>▪ Recreation and entertainment (television licence).</li> </ul>

<b>CPI for regulated prices</b>	<b>39</b>	Regulated prices are those administered prices that are said to be monitored and controlled by government policy. To this end, price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective.										
	<b>40</b>	<p>Basket of administered prices that are regulated:</p> <ul style="list-style-type: none"> <li>▪ Housing (water);</li> <li>▪ Fuel and power (electricity and paraffin);</li> <li>▪ Medical care (public hospital);</li> <li>▪ Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls); and</li> <li>▪ Transport (petrol).</li> </ul>										
<b>Reliability of estimates</b>	<b>41</b>	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.										
<b>Related publications</b>	<b>42</b>	<p>Users may also wish to refer to the following publications, which are available from Stats SA</p> <p>–</p> <ul style="list-style-type: none"> <li>• Bulletin of Statistics; and</li> <li>• SA Statistics.</li> </ul>										
<b>Unpublished statistics</b>	<b>43</b>	In some cases, Stats SA can also make available information, which is not published. This information can be made available in one or more of the following ways: computer printout, diskette or CD. Generally a fee is levied for providing unpublished information.

**GLOSSARY**

**Annual inflation rate** The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

**Annual percentage change** The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.

**Average annual inflation rate** The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.

**Average annual percentage change** The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.

**CPI excluding interest rates on mortgage bonds (CPIX)** The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services, which is used to compile the Consumer Price Index.

In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds CPIX, is included in this release (see table 1 on page 14).

**CPI for administered prices** An administered price is defined as the price of a product, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies/institutions without reference to market forces.

**CPI for regulated prices** Regulated prices are those administered prices that are said to be monitored and controlled by government policy. To this end, price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective.

**Core inflation** The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.

**Core index** The core index is derived by exclusions from the CPI on the basis that changes in their prices are policy. Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows –

- Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.
- Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.
- Interest rates on mortgage bonds and overdrafts/personal loans: These are excluded due to their "perverse" effect on the CPI. A tightening in monetary policy to counter inflation pressures would cause interest rates to rise and be reflected in the interest cost component of measured inflation. This, in turn, could provoke a further tightening of monetary policy resulting in excessive movements in the inflation rate.
- Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).
- Assessment rates: These taxes are predominantly determined by local government.

<b>Establishment</b>	An establishment (branch) is the smallest economic unit that functions as a separate entity.
<b>Indicator products</b>	Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.
<b>Inflation rate</b>	Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.
<b>Metropolitan area</b>	<p>Metropolitan areas in the CPI refer to the following 12 metropolitan areas used in the compilation of the CPI –</p> <ul style="list-style-type: none"><li>• Cape Peninsula</li><li>• Port Elizabeth/Uitenhage</li><li>• East London</li><li>• Kimberley</li><li>• Bloemfontein</li><li>• Free State Goldfields</li><li>• Durban/Pinetown</li><li>• Pietermaritzburg</li><li>• Pretoria/Centurion/Akasia</li><li>• Witwatersrand</li><li>• Nelspruit/Witbank</li><li>• Polokwane</li></ul> <p>Initially 12 metropolitan areas were selected, based on the population figures as well as the size of the economic activity in these areas. However, when the 9 provinces were introduced, the Vaal Triangle metropolitan area was included partially (VanderBiljpark and Vereeniging) in the other urban areas of Gauteng and partially (Sasolburg) in the other urban areas of the Free State. Due to the fact that there were no metropolitan areas in the Limpopo Province and Mpumalanga, the main urban areas and Nelspruit/Witbank in each of these provinces were selected as metropolitan areas. As from 2002 the Klerksdorp/Orkney/Stilfontein area is included under other urban areas as the coverage in the IES was not comprehensive enough to determine a weighting structure for this area.</p>
<b>Monthly percentage change</b>	The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.
<b>Weights</b>	The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.

**FOR MORE INFORMATION**

Stats SA publishes approximately 300 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

**Advance release calendar**

An advance release calendar is disseminated on <http://www.statssa.gov.za>

**Stats SA products**

A complete set of Stats SA publications is available in the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Nelspruit  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

**Electronic services**

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.

You can visit us on the Internet at: <http://www.statssa.gov.za>
