EXECUTIVE SUMMARY

KEY FIGURES AT DECEMBER 2006

| | | Indices (2000=100) | Percentage change between | | |
|---|------------------|-----------------------|---------------------------|---|---|
| Main indices | December 2005 | November 2006 | December 2006 | November 2006 and December 2006 | December 2005 and December 2006 |
| | | | | Actual % | Actual % |
| CPI for rural areas | 132,3 | 140,2 | 140,4 | + 0,1 | + 6,1 |
| CPI excluding interest rates on mortgage bonds (CPIX) for rural | | | | | |
| areas | 135,5 | 143,3 | 143,3 | 0,0 | + 5,8 |
| CPI for total country | 131,3 | 138,5 | 138,9 | + 0,3 | + 5,8 |
| CPI excluding interest rates on mortgage bonds (CPIX) for total | 107.5 | 144.5 | 144.6 | 0.1 | |
| country | 137,5 | 144,5 | 144,6 | + 0,1 | + 5,2 |

KEY FINDINGS AT DECEMBER 2006

The inflation rate for the rural areas is 6,1% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005)

The inflation rate for the rural areas is 6,1% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005). This rate is 0,3 of a percentage point lower than the corresponding annual rate of 6,4% at November 2006 (see table 1.2.1, p.13). This lower rate at December 2006 can be explained by decreases in the annual rates of change for:

- The CPI for household operation for which the rate decreased from 14,9% at November 2006 to a lower rate of 13,8% at December 2006.
- The CPI for food for which the rate decreased from 9,0% at November 2006 to a lower rate of 7,8% at December 2006.

However, these decreases are partially counteracted by an increase in the annual rate of change for:

 The CPI for housing for which the rate increased from 6,4% at November 2006 to a higher rate of 7,7% at December 2006.

From November 2006 to December 2006 the Consumer Price Index for the rural areas increased by 0,1%.

The annual increase of 6,1% in the Consumer Price Index for the rural areas is mainly due to relatively large annual contributions in the price indices for food (+ 3,7 percentage points), household operation (+ 0,9 of a percentage point), housing (+ 0,3 of a percentage point), medical care and health expenses (+ 0,3 of a percentage point), personal care (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), fuel and power (+ 0,2 of a percentage point) and transport (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 1.3, p.14).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the rural areas is 5,8% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the rural areas is 5,8% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005). This rate is 0,3 of a percentage point lower than the corresponding annual rate of 6,1% at November 2006 (see table 1.2.2, p.13). From November 2006 to December 2006 the CPIX for the rural areas remained unchanged.

The annual increase of 5,8% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the rural areas is mainly due to relatively large annual contributions in the price indices for food (+ 3,7 percentage points), household operation (+ 0,9 of a percentage point), medical care and health expenses (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), fuel and power (+ 0,2 of a percentage point), transport (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 1.5, p.14).

The inflation rate for the total country is 5,8% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005)

The inflation rate for the total country is 5,8% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005). This rate is 0,2 of a percentage point higher than the corresponding annual rate of 5,6% at November 2006 (see table 2.2.1, p.25).

From November 2006 to December 2006 the Consumer Price Index for the total country increased by 0,3%.

The annual increase of 5,8% in the Consumer Price Index for the total country is mainly due to relatively large annual contributions in the price indices for food (+ 2,3 percentage points), housing (+ 1,5 percentage points), medical care and health expenses (+ 0,5 of a percentage point), transport (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point), household operation (+ 0,3 of a percentage point), cigarettes, cigars and tobacco (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,2 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 2.3, p.26).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the total country is 5,2% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the total country is 5,2% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005). This rate is the same as the corresponding annual rate of 5,2% at November 2006. From November 2006 to December 2006 the CPIX for the total country increased by 0,1%.

The annual increase of 5,2% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the total country is mainly due to relatively large annual contributions in the price indices for food (+ 2,3 percentage points), housing excluding interest rates on mortgage bonds (+ 0,6 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), transport (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point), household operation (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), cigarettes, cigars and tobacco (+ 0,2 of a percentage point), education (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 2.5, p.26).

Administered and regulated prices

The CPI for administered prices at December 2006 (i.e. the CPI for administered prices for the rural areas at December 2006 compared with that at December 2005) is 3,9%. This rate is 0,6 of a percentage point higher than the corresponding annual rate of 3,3% at November 2006 (see table 1.1, p.12).

The CPIX for administered prices at December 2006 (i.e. the CPIX for administered prices for the rural areas at December 2006 compared with that at December 2005) is 3,9%. This rate is 0,7 of a percentage point higher than the corresponding annual rate of 3,2% at November 2006 (see table 1.1, p.12).

The CPI for administered prices at December 2006 (i.e. the CPI for administered prices for the total country at December 2006 compared with that at December 2005) is 5,4%. This rate is 1,1 percentage points higher than the corresponding annual rate of 4,3% at November 2006 (see table 2.1, p.24).

The CPIX for administered prices at December 2006 (i.e. the CPIX for administered prices for the total country at December 2006 compared with that at December 2005) is 5,4%. This rate is 1,1 percentage points higher than the corresponding annual rate of 4,3% at November 2006 (see table 2.1, p.24).

KEY FINDINGS FOR THE YEAR 2006

The average annual figures are calculated once a year as soon as the December figures are available (see p. 43)

The average annual inflation rate for the rural areas is 4,7% for the year 2006 (i.e. the percentage change in the average CPI for the rural areas for the year 2006 compared with that for the year 2005). This rate is 2,3 percentage points higher than the corresponding annual rate of 2,4% for the year 2005 (see table A, p.8).

The average annual CPIX inflation rate for the rural areas for the year 2006 (i.e. the average CPIX for the year 2006 compared with that for the year 2005) is 4,8%. This rate is 2,1 percentage points higher than the corresponding annual rate of 2,7% for the year 2005 (see table A, p.8).

The average annual inflation rate for the total country is 4,6% for the year 2006 (i.e. the average CPI for the total country for the year 2006 compared with that for the year 2005). This rate is 1,4 percentage points higher than the corresponding annual rate of 3,2% for the year 2005 (see table C, p.20).

The average annual CPIX inflation rate for the total country for the year 2006 (i.e. the average CPIX for the year 2006 compared with that for the year 2005) is 4,6%. This rate is 0,9 of a percentage point higher than the corresponding annual rate of 3,7% for the year 2005 (see table C, p.20).

NOTE

As from the January 2007 publication the CPI – Headline (P0141.1) and the CPI - Rural areas and total country (P0141.2) will be combined into one publication Consumer Price Index (P0141.1).

RURAL AREAS

Stats SA introduced a CPI for the rural areas as well as for the total country as from May 2003, based on the prices monitored in the smaller towns, as no pricing surveys are undertaken in the rural areas. However the weights used are the actual weights obtained for the rural areas from information received from the Survey of Income and Expenditure of Households, conducted in October 2000.

RURAL AREAS

KEY FINDINGS FOR THE YEAR 2006

The average annual CPI inflation rate is 4,7% for the year 2006 (i.e. the average CPI for the rural areas for the year 2006 compared with that for the year 2005)

The average annual inflation rate for the rural areas is 4,7% for the year 2006 (i.e. the percentage change in the average CPI for the rural areas for the year 2006 compared with that for the year 2005). This rate is 2,3 percentage points higher than the corresponding annual rate of 2,4% for the year 2005 (see table A, p.8).

The average annual CPIX inflation rate for the rural areas for the year 2006 (i.e. the average CPIX for the year 2006 compared with that for the year 2005) is 4,8%. This rate is 2,1 percentage points higher than the corresponding annual rate of 2,7% for the year 2005 (see table A, p.8).

The average annual core inflation rate for the rural areas for the year 2006 (i.e. the average core index for the year 2006 compared with that for the year 2005) is 3,6%. This rate is 1,1 percentage points higher than the corresponding annual rate of 2,5% for the year 2005 (see table A, p.8).

The average annual food inflation rate for the rural areas for the year 2006 (i.e. the average CPI for food for the year 2006 compared with that for the year 2005) is 5,6%. This rate is 4,9 percentage points higher than the corresponding annual rate of 0,7% for the year 2005 (see table A, p.8).

KEY FIGURES FOR THE YEAR 2006

The average annual figures are calculated once a year as soon as the December figures are available (see p.43)

Table A – Average annual Consumer Price Index (CPI) and the average annual inflation rate for the rural areas according to main indices

| | Year | | | | | | | | | | |

| Core index | 133,9 | 140,0 | 139,8 | - 0,1 | + 4,4 |
| Food price index | 142,4 | 153,4 | 153,5 | + 0,1 | + 7,8 |
| CPI excluding food price index | 125,2 | 130,9 | 131,1 | + 0,2 | + 4,7 |
| CPI excluding Value Added Tax (VAT) | 132,3 | 140,2 | 140,4 | + 0,1 | + 6,1 |

KEY FINDINGS AT DECEMBER 2006

The inflation rate for the rural areas is 6,1% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005)

The inflation rate for the rural areas is 6,1% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005). This rate is 0,3 of a percentage point lower than the corresponding annual rate of 6,4% at November 2006 (see table 1.2.1, p.13). This lower rate at December 2006 can be explained by decreases in the annual rates of change for:

- The CPI for household operation for which the rate decreased from 14,9% at November 2006 to a lower rate of 13,8% at December 2006.
- The CPI for food for which the rate decreased from 9,0% at November 2006 to a lower rate of 7,8% at December 2006.

However, these decreases are partially counteracted by an increase in the annual rate of change for:

• The CPI for housing for which the rate increased from 6,4% at November 2006 to a higher rate of 7,7% at December 2006.

From November 2006 to December 2006 the Consumer Price Index for the rural areas increased by 0,1%.

The annual increase of 6,1% in the Consumer Price Index for the rural areas is mainly due to relatively large annual contributions in the price indices for food (+ 3,7 percentage points), household operation (+ 0,9 of a percentage point), housing (+ 0,3 of a percentage point), medical care and health expenses (+ 0,3 of a percentage point), personal care (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), fuel and power (+ 0,2 of a percentage point) and transport (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 1.3, p.14).

From November 2006 to December 2006 the Consumer Price Index for the rural areas increased by 0,1%. This monthly increase is due to a monthly contribution in the price index for housing (+ 0,1 of a percentage point, mainly due to a 0,5 of a percentage point increase in the interest rates on mortgage bonds) (see table 1.4, p.14).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the rural areas is 5,8% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the rural areas is 5,8% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005). This rate is 0,3 of a percentage point lower than the corresponding annual rate of 6,1% at November 2006 (see table 1.2.2, p.13). From November 2006 to December 2006 the CPIX for the rural areas remained unchanged.

The annual increase of 5,8% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the rural areas is mainly due to relatively large annual contributions in the price indices for food (+ 3,7 percentage points), household operation (+ 0,9 of a percentage point), medical care and health expenses (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), fuel and power (+ 0,2 of a percentage point), transport (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 1.5, p.14).

From November 2006 to December 2006 the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the rural areas remained unchanged. Although this index remained unchanged there is a monthly contribution in the price index for food (+ 0,1 of a percentage point). This monthly increase is counteracted by a monthly decrease in the price index for household operation (- 0,1 of a percentage point) (see table 1.6, p.14).

Core inflation rate

The core inflation rate for the rural areas (see explanatory notes 33, 34 and 35 on page 40 and 41) is 4,4% at December 2006 (i.e. the core index at December 2006 compared with that at December 2005). This rate is 0,2 of a percentage point lower than the corresponding annual rate of 4,6% at November 2006. From November 2006 to December 2006 the core index for the rural areas decreased by 0,1%.

The annual increase of 4,4% in the core index for the rural areas is mainly due to relatively large annual contributions in the price indices for food (+ 2,1 percentage points), household operation (+ 1,0 percentage point), medical care and health expenses (+ 0,4 of a percentage point), transport (+ 0,4 of a percentage point), personal care (+ 0,3 of a percentage point) and education (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,4 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 1.7, p.15).

From November 2006 to December 2006 the core index for the rural areas decreased by 0,1%. This monthly decrease is due to a monthly contribution in the price index for food (- 0,1 of a percentage point) (see table 1.8, p.15).

Food inflation

The price index for food reflects an annual rate of change of 7,8% at December 2006 (i.e. the CPI for food at December 2006 compared with that at December 2005). This rate is 1,2 percentage points lower than the corresponding annual rate of 9,0% at November 2006. From November 2006 to December 2006 this index increased by 0,1%.

Annual increases occurred in the price indices for meat (+ 13,9%), fats and oils (+ 11,2%), fish and other seafood (+ 10,4%), sugar (+ 10,1%), fruit and nuts (+ 9,7%), grain products (+ 8,6%), coffee, tea and cocoa (+ 4,9%), other food products (+ 4,6%) and milk, cheese and eggs (+ 2,9%). These annual increases are slightly counteracted by an annual decrease in the price index for vegetables (- 2,4%) (see table 1.9, p.16).

Monthly increases occurred in the price indices for coffee, tea and cocoa (+ 1,3%), fruit and nuts (+ 1,0%) and meat (+ 0,9%). These monthly increases are slightly counteracted by monthly decreases in the price indices for vegetables (- 1,0%), fish and other seafood (- 0,7%), fats and oils (- 0,7%), milk, cheese and eggs (- 0,5%), sugar (- 0,5%), grain products (- 0,1%) and other food products (- 0,1%) (see table 1.9, p.16).

Price index for CPI excluding food

The price index for non-food items reflects an annual rate of increase of 4,7% at December 2006 (i.e. the CPI excluding food items at December 2006 compared with that at December 2005), which is 0,6 of a percentage point higher than the corresponding annual rate of 4,1% at November 2006. From November 2006 to December 2006 this index increased by 0,2%.

Annual increases occurred in the price indices for household operation (+ 13,8%), cigarettes, cigars and tobacco (+ 8,8%), medical care and health expenses (+ 8,6%), housing (+ 7,7%), other products (+ 7,1%), alcoholic beverages (+ 7,0%), education (+ 6,5%), personal care (+ 4,7%), fuel and power (+ 3,4%), non-alcoholic beverages (+ 3,0%), reading matter (+ 3,0%), transport (+ 2,4%) and communication (+ 0,2%). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 7,6%), furniture and equipment (- 1,9%) and recreation and entertainment (- 0,2%) (see table 1.9, p.16).

Relatively large monthly increases occurred in the price indices for other products (+ 1,4%), housing (+ 1,3%) and non-alcoholic beverages (+ 0,3%). These monthly increases are slightly counteracted by monthly decreases in the price indices for household operation (- 0,5%), clothing and footwear (- 0,3%), transport (- 0,3%), fuel and power (- 0,1%), furniture and equipment (- 0,1%), medical care and health expenses (- 0,1%), recreation and entertainment (- 0,1%) and personal care (- 0,1%) (see table 1.9, p.16).

Table 1.1 - Expenditure group and area indices of the Consumer Price Index and percentage change for the rural areas

| | | Indices (2000=100) | Percentage change between | | |
|---|---------------------|-----------------------|--------------------------------------|---------------------------------|-----------------------------|
| Expenditure group/Area indices | Dec | Nov | Dec | Nov 2006 and Dec 2006 | Dec 2005 and Dec 2006 |
| | 2005 | 2006 | 2006 | Actual | Actual |
| | | | | % | % |
| Expenditure group indices | | | | | |
| Very low expenditure | 137,9 | 147,4 | 147,4 | 0,0 | +6,9 |

TOTAL COUNTRY

TOTAL COUNTRY

KEY FINDINGS FOR THE YEAR 2006

The average annual CPI inflation rate is 4,6% for the year 2006 (i.e. the average CPI for the total country for the year 2006 compared with that for the year 2005)

The average annual inflation rate for the total country is 4,6% for the year 2006 (i.e. the average CPI for the total country for the year 2006 compared with that for the year 2005). This rate is 1,4 percentage points higher than the corresponding annual rate of 3,2% for the year 2005 (see table C, p.20).

The average annual CPIX inflation rate for the total country for the year 2006 (i.e. the average CPIX for the year 2006 compared with that for the year 2005) is 4,6%. This rate is 0,9 of a percentage point higher than the corresponding annual rate of 3,7% for the year 2005 (see table C, p.20).

The average annual core inflation rate for the total country for the year 2006 (i.e. the average core index for the year 2006 compared with that for the year 2005) is 3,6%. This rate is 0,1 of a percentage point lower than the corresponding annual rate of 3,7% for the year 2005 (see table C, p.20).

The average annual food inflation rate for the total country for the year 2006 (i.e. the average CPI for food for the year 2006 compared with that for the year 2005) is 6,4%. This rate is 4,6 percentage points higher than the corresponding annual rate of 1,8% for the year 2005 (see table C, p.20).

KEY FINDINGS AT DECEMBER 2006

The inflation rate for the total country is 5,8% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005)

The inflation rate for the total country is 5,8% at December 2006 (i.e. the CPI at December 2006 compared with that at December 2005). This rate is 0,2 of a percentage point higher than the corresponding annual rate of 5,6% at November 2006 (see table 2.2.1, p.25).

From November 2006 to December 2006 the Consumer Price Index for the total country increased by 0,3%.

The annual increase of 5,8% in the Consumer Price Index for the total country is mainly due to relatively large annual contributions in the price indices for food (+ 2,3 percentage points), housing (+ 1,5 percentage points), medical care and health expenses (+ 0,5 of a percentage point), transport (+ 0,4 of a percentage point), fuel and power (+ 0,3 of a percentage point), household operation (+ 0,3 of a percentage point), cigarettes, cigars and tobacco (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,2 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 2.3, p.26).

From November 2006 to December 2006 the Consumer Price Index for the total country increased by 0,3%. This monthly increase is due to monthly contributions in the price indices for housing (+ 0,2 of a percentage point, mainly due to a 0,5 of a percentage point increase in the interest rates on mortgage bonds) and food (+ 0,1 of a percentage point) (see table 2.4, p.26).

The annual percentage change in the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the total country is 5,2% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005)

The annual percentage change in the CPIX, which is the Consumer Price Index excluding the interest rates on mortgage bonds, for the total country is 5,2% at December 2006 (i.e. the CPIX at December 2006 compared with that at December 2005). This rate is the same as the corresponding annual rate of 5,2% at November 2006. From November 2006 to December 2006 the CPIX for the total country increased by 0,1%.

The annual increase of 5,2% in the Consumer Price Index excluding the interest rates on mortgage bonds (CPIX) for the total country is mainly due to relatively large annual contributions in the price indices for food (+ 2,3 percentage points), housing excluding interest rates on mortgage bonds (+ 0,6 of a percentage point), medical care and health expenses (+ 0,6 of a percentage point), transport (+ 0,5 of a percentage point), fuel and power (+ 0,3 of a percentage point), household operation (+ 0,3 of a percentage point), alcoholic beverages (+ 0,2 of a percentage point), cigarettes, cigars and tobacco (+ 0,2 of a percentage point), education (+ 0,2 of a percentage point) and personal care (+ 0,2 of a percentage point). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 0,3 of a percentage point) and furniture and equipment (- 0,1 of a percentage point) (see table 2.5, p.26).

From November 2006 to December 2006 the Consumer Price Index excluding interest rates on mortgage bonds (CPIX) for the total country increased by 0,1%. This monthly increase is due to a monthly contribution in the price index for food (+ 0,1 of a percentage point) (see table 2.6, p.26).

Core inflation rate

The core inflation rate for the total country (see explanatory notes 33, 34 and 35 on page 40 and 41) is 3,9% at December 2006 (i.e. the core index at December 2006 compared with that at December 2005). This rate is the 0,2 of a percentage point higher than the corresponding rate of 3,7% at November 2006. From November 2006 to December 2006 the core index for the total country decreased by 0,1%.

The annual increase of 3,9% in the core index, for the total country is mainly due to relatively large annual contributions in the price indices for transport (+ 1,1 percentage points), food (+ 1,0 percentage point), medical care and health expenses (+ 0,8 of a percentage point), housing (+ 0,4 of a percentage point), cigarettes, cigars and tobacco (+ 0,2 of a percentage point) and household operation (+ 0,2 of a percentage point). These annual increases are slightly counteracted by an annual decrease in the price index for clothing and footwear (- 0,3 of a percentage point) (see table 2.7, p.27).

From November 2006 to December 2006 the core index for the total country decreased by 0,1%. This monthly decrease is due to a monthly contribution in the price index for transport (- 0,1 of a percentage point, mainly due to a 7c\l decrease in the price of petrol) (see table 2.8, p.27).

Food inflation

The price index for food for the total country reflects an annual rate of increase of 7,7% at December 2006 (i.e. the CPI for food at December 2006 compared with that at December 2005). This rate is 1,3 percentage points lower than the corresponding annual rate of 9,0% at November 2006. From November 2006 to December 2006 this index increased by 0,2%.

Annual increases occurred in the price indices for meat (+ 16,1%), fish and other seafood (+ 10,3%), sugar (+ 9,2%), fats and oils (+ 8,4%), grain products (+ 6,5%), fruit and nuts (+ 3,9%), coffee, tea and cocoa (+ 3,5%), other food products (+ 3,5%), milk, cheese and eggs (+ 3,1%) and vegetables (+ 0,1%) (see table 2.9, p.28).

Monthly increases occurred in the price indices for fruit and nuts (+1,3%), meat (+1,0%), coffee, tea and cocoa (+0,5%), fish and other seafood (+0,1%) and sugar (+0,1%). These monthly increases are slightly counteracted by monthly decreases in the price indices for vegetables (-0,5%), milk, cheese and eggs (-0,3%), fats and oils (-0,3%), other food products (-0,3%) and grain products (-0,1%) (see table 2.9, p.28).

Price index for CPI excluding food

The price index for non-food items reflects an annual rate of increase of 5,1% at December 2006 (i.e. the CPI excluding food items at December 2006 compared with that at December 2005). This rate is 0,6 of a percentage point higher than the corresponding annual rate of 4,5% at November 2006. From November 2006 to December 2006 this index increased by 0,3%.

Annual increases occurred in the price indices for cigarettes, cigars and tobacco (+ 9,4%), housing (+ 9,1%), alcoholic beverages (+ 7,3%), medical care and health expenses (+ 7,0%), education (+ 6,9%), fuel and power (+ 6,4%), household operation (+ 6,4%), personal care (+ 4,4%), other products (+ 4,0%), reading matter (+ 3,6%), non-alcoholic beverages (+ 3,4%), transport (+ 3,2%), recreation and entertainment (+ 0,4%) and communication (+ 0,2%). These annual increases are slightly counteracted by annual decreases in the price indices for clothing and footwear (- 9,3%) and furniture and equipment (- 1,2%) (see table 2.9, p.28).

Relatively large monthly increases occurred in the price indices for housing (+ 1,4%, mainly due to a 0,5 of a percentage point increase in the interest rates on mortgage bonds), other products (+ 0,8%), reading matter (+ 0,2%) and personal care (+ 0,2%). These monthly increases are slightly counteracted by relatively large monthly decreases in the price indices for transport (- 0,3%), recreation and entertainment (- 0,3%), clothing and footwear (- 0,2%) and household operation (- 0,2%) (see table 2.9, p.28).

Area indices

The Kimberley area recorded the highest annual inflation rate at 7,6%, while the lowest annual inflation rate of 4,0% is recorded for the North West Province and rural areas of Gauteng (see table 2.12, p.31).

Regarding food prices, the highest annual inflation rate of 12,4% is recorded for the Free State Goldfields area, while the lowest annual inflation rate of 3,0% is recorded for the North West Province excluding the rural areas (see table 2.13, p.32).

Pensioners

The Kimberley area recorded the highest annual rate of increase of 7,9%, while the lowest annual rate of change of 3,3% is recorded for the North West Province excluding the rural areas (see table 2.16, p.35).

Table 2.1 - Expenditure group and area indices of the Consumer Price Index and percentage change for the total country

EXPLANATORY NOTES

Introduction

- 1 This publication contains results of the monthly Survey of Consumer (Retail) Prices. The purpose of the survey is to collect and provide information regarding changes in the overall level of prices of all goods and services bought by the average household.
- The indices are classified according to the International Trade Classification (as indicated in tables 1.1 1.10 and 2.1 2.10) and geographical areas (as indicated in tables 2.12 2.16). Due to a new international classification system, prescribed by the 1993 System of National Accounts (SNA revision IV, 1993), compiled by the United Nations, the International Monetary Fund, the World Bank, the Organisation for Economic Corporation and Development and the Commission of European Communities, the Classification of Individual Consumption by Purpose (COICOP), Stats SA decided to classify the price information collected according to this new classification system, alongside the existing classification system. The information contained in tables 1.11 and 2.11 is classified according to COICOP. The indices are calculated on the base 2000=100.
- The Consumer Price Index (CPI) is a series of figures (numbers) showing how the average price level of all those goods and services (basket of goods and services) bought by a typical consumer or household changes over time. The inflation rate is the annual percentage change in the CPI.

Survey of Income and Expenditure of Households (IES)

- 4 Stats SA conducts a Survey of Income and Expenditure of Households every five years. This survey is conducted by enumerators visiting a number of households throughout South Africa to obtain details on income and expenditure of households. The information obtained through this survey is weighted according to the Population Census figures in order to represent all households in South Africa.
- 5 Every five years the results from this survey are used to identify the goods and services bought by a typical consumer or household and which should be included in the basket of goods and services used to monitor price changes.
- Furthermore, every five years the results from the Survey of Income and Expenditure of Households are used to determine the weights of the products/groups (indicator products) in the basket. The weights of a specific product/group is calculated by dividing the total amount spent by all households in South Africa on the specific product/group by the total amount spent on all goods and services by all households.

2000 Survey of Income and Expenditure of Households

- 7 Stats SA conducted the five-yearly Survey of Income and Expenditure of Households in October 2000 covering a sample of 30 000 households. The information obtained through this survey was weighted according to the 1996 Population Census figures in order to represent all households in South Africa.
- The 2000 Survey of Income and Expenditure of Households collected information regarding approximately 1 000 different goods and services groups. Stats SA made a further breakdown of these groups using supplementary sources. This process led to a list of approximately 1 500 groups on which the current calculation of the CPI is based.

Based on the above-mentioned information for 2000 (see paragraphs 7 and 8), the new weight for a specific product/group was calculated by dividing total expenditure by all households in South Africa on the specific product/group by total expenditure on all goods and services by all households in South Africa. Stats SA implemented the new weights, i.e. the 2000 weights based on the 2000 Survey of Income and Expenditure of Households, as from the January 2002 CPI publication.

Basket of goods and services

10 The current CPI basket covers approximately 1 500 goods and services.

- These goods and services are grouped according to the International Trade Classification into 17 main groups -
 - Food:
 - Non-alcoholic beverages;
 - Alcoholic beverages;
 - Cigarettes, cigars and tobacco;
 - Clothing and Footwear;
 - Housing;
 - · Fuel and power;
 - Furniture and equipment;
 - Household operation;
 - Medical care and health expenses;
 - Transport;
 - Communication;
 - Recreation and entertainment;
 - Reading matter;
 - Education;
 - Personal care; and
 - Other.
- 12 These goods and services are grouped according to an alternative classification, i.e. the COICOP classification, into nine main groups
 - Food, beverages and tobacco;
 - · Clothing and Footwear;
 - Housing, water, electricity, gas and other fuels;
 - Furnishings, household equipment and routine maintenance of the house;
 - Health;
 - Transport;
 - Leisure, entertainment and culture;
 - Education; and
 - Miscellaneous goods and services.

Weighting basis

13 The CPI is a fixed weights index, which implies that the weight of each product/group stays the same for the five year period until the results of the next Survey of Income and Expenditure of Households become available.

Expenditure groups

- 14 Five expenditure group categories or quintiles are defined according to total annual expenditure per household as at October of the year of the Survey of Income and Expenditure of Households. The five expenditure group categories used in this publication were defined according to total annual expenditure per household as at October 2000. These categories are as follows
 - very low expenditure group up to R8 070;
 - low expenditure group R8 071 up to R12 263;
 - middle expenditure group R12 264 up to R24 365;
 - high expenditure group R24 366 up to R55 159; and
 - very high expenditure group R55 160 and more.

Scope of the CPI survey

- 15 The Survey of Retail Prices is a retail trade and service outlets sample survey covering prices of selected consumer goods and services sold by these retail trade and service outlets to consumers in the 12 metropolitan and 22 other urban areas in the nine provinces. The results of the survey are used to compile the Consumer Price Index, an economic indicator.
- Prices of goods and services included in the CPI are collected during the first three weeks of the month. Although these prices are generally collected monthly (see list of items in paragraph 17), the prices of some items are collected quarterly (see list of items in paragraph 18), six monthly or annually (see list of items in paragraph 19). The collection of prices depends on the frequency at which these prices tend to change. However, if it comes to the attention of Stats SA that prices are about to change, these prices will be collected, even if it is not according to the normal collection schedule.
- **17** Prices of items/products collected monthly:
 - Bread.
 - Meat.
 - Milk.
 - Vegetables and fruit.
 - Other groceries.
 - Alcoholic beverages.
 - Sweets, non-alcoholic beverages, ice-cream and tobacco products.
 - Clothing and footwear.
 - Repairs of clothing, footwear and furniture.
 - Interest rates on mortgage bonds.
 - Coal and wood.
 - New vehicles, repairs and services.
 - Motor spare parts and accessories.
 - Petrol.
 - Newspapers and magazines.
 - Entrance fees drive-inns and bioscopes.
 - Air transport fees.
 - Cellular phone tariffs.
 - Furniture and equipment.
 - Medicine.
 - Garden tools.
 - Washing ironing and dry-cleaning.
 - Sport equipment.
 - · Reading matter and stationery.
 - Tariffs of hairdressing services.
 - Ironware and crockery.
 - New and retread tyres.
 - · Household textiles.
 - Electrical appliances and equipment.
 - Medical, toilet and photographic requisites and services.
 - Musical instruments.
 - · Prices of pets.
- **18** Prices of items/products collected quarterly:

| Ite | ms/products | Mo | onths of survey |
|-----|---------------------------|----|--------------------------------------|
| • | Rent of dwellings. | • | January, April, July and October. |
| • | Motor vehicle insurance. | • | March, June, September and December. |
| • | Public transport tariffs. | • | March, June, September and December. |

19 Prices of items/products collected annually:

| Items/products | Month of survey |
|--|-----------------|
| Doctor's and dentist's fees. | January. |
| Motor vehicle license and registration | |
| fees. | |
| Telephone (land lines). | |
| Toll-fees at toll-gates. | March. |
| School funds. | |
| University boarding and class fees. | |
| Parking fees. | April. |
| Postal tariffs. | |
| Property taxes. | • July. |
| Refuse removal. | |
| Sanitary fees. | |
| Maintenance of graves. | October. |
| | |

20 Prices of items/products collected at other times of the year:

| Items/products | Months of survey |
|------------------------------|---|
| Contribution to medical aid. | January. |
| Property insurance | January and July. |
| Hospital fees. | |
| Water. | January, July and August. |
| Electricity. | |
| Domestic workers. | February, September. |
| Television licenses. | April, October. |

Classification 21

- The International Trade Classification (ITC) was used to classify the products and services contained in the basket of goods and services.
- A further classification of the products and services in the basket of goods and services, in line with international practices, was done according to the Classification of Individual Consumption by Purpose (COICOP). The indices according to this classification are published in tables 1.11 and 2.11.

Statistical unit

The statistical unit is the department (e.g food department, hardware department, clothing department) of the retail trade and service establishments (branches). The establishment is the smallest economic unit that functions as a separate entity. Information is obtained from the different departments in each establishment. Each department in the establishment is classified according to the classification of the products that the department sells, which is then classified according to ITC as well as COICOP.

Survey methodology and design

- Different phases of sampling takes place. Firstly, a sample of goods and services, based on the information collected through the Survey of Income and Expenditure of Households, is designed and selected. An indicator product is selected purposively within each product group. To be selected, a product should constitute a large quantity, at least 0,01% of total expenditure. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- 25 Secondly, a geographical sample for price collection is designed and selected. Currently 12 major metropolitan areas, covering all nine provinces, are included in the geographical sample for price collection. The "other urban areas" are covered by nine provincial samples of two to three urban areas each, depending on the population size of the area. Therefore, a total of 22 "other urban areas" is sampled.

- Thirdly, for each of the 34 sample areas, a retail trade and service outlet sampling frame is constructed, based on available data sources, mainly the business register of Stats SA, telephone directories and lists obtained from the head offices of chain stores. The sample is purposively distributed geographically within areas. Specific retail trade and service outlets are selected randomly within each area. Prices are collected from department stores, as well as specialist shops. The sample of outlets is revised every five years when the weights are revised.
- 27 Currently, an average of 105 000 price quotations are collected each month from approximately 2 100 outlets. The indices are based on retail trade and service prices.

Pricing basis

28 Price information refers to the first three weeks of the month. The prices of all items include VAT.

Processing of price information

29 The prices that are quoted for the different products/services are edited to ensure that it is price comparable with the prices received for the same products in the previous month. If the price information difference between successive periods are outside the specified range, the current price levels are confirmed.

Calculating product price indices

30 Price relatives are calculated for each product per respondent by dividing the current price by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then multiplied with the product index for the previous month in order to obtain a product index for the relevant month.

As no pricing surveys are yet undertaken in the rural areas, the prices monitored in the smaller towns will be used to calculate price relatives for each product.

Calculating group price indices

Group price indices are calculated by weighting product indices with the relevant product weight, according to each weighting structure, using the Laspeyres formula.

Contributions 32 of specific items to the total CPI

2 The monthly (annual) contribution of a specific item or group of items to the total CPI is calculated by multiplying the weight of this item or group of items with the monthly (annual) change in the index for this item or group of items, divided by the index for 'All items'.

Core index

The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, the core index is derived by excluding items from the CPI basket on the basis that changes in their prices are highly volatile, subjected to temporary influences, or affected by government intervention and policy.

- **34** Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows
 - Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.
 - Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.
 - Interest rates on mortgage bonds and overdrafts/personal loans: These
 are excluded due to their "perverse" effect on the CPI. A tightening in
 monetary policy to counter inflation pressures would cause interest rates
 to rise and be reflected in the interest cost component of measured
 inflation. This, in turn, could provoke a further tightening of monetary
 policy resulting in excessive movements in the inflation rate.
 - Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).
 - Assessment rates: These taxes are predominantly determined by local government.
- The choice of exclusions was informed by best practice amongst several other international agencies, and after consultation with the south African Reserve Bank and other local technical experts.

CPI excluding interest rates on mortgage bonds (CPIX)

In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, the Core index excluding petrol and the CPIX. Stats SA has accordingly calculated these measures and only the CPIX and the Core index are included in this release.

CPI for administered prices

- An administered price is defined as the price of a product, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies/institutions without reference to market forces.
- **38** Basket of administered prices:
 - Housing (sanitary fees, refuse removal, assessment rates, water and university boarding fees);
 - Fuel and power (electricity and paraffin);
 - Medical care (public hospital);
 - Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls);
 - Education (school fees and tertiary fees):
 - Transport (petrol, public transport municipal buses and trains, motor licenses and registration); and
 - Recreation and entertainment (television license).

CPI for regulated prices

Regulated prices are those administered prices that are said to be monitored and controlled by government policy. To this end, price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective.

- **40** Basket of administered prices that are regulated:
 - Housing (water);
 - Fuel and power (electricity and paraffin);
 - Medical care (public hospital);
 - Communication (telephone calls, telephone rent and installation, postage, cell phones connection fees and cell phones calls); and
 - Transport (petrol).

Reliability of estimates

41 Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.

GLOSSARY

Annual inflation rate

The annual inflation rate is the change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Annual percentage change

The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage.

Average annual inflation rate

The average annual inflation rate is the change in the average CPI for all items of one year compared with the average CPI for all items of the previous year expressed as a percentage.

Average annual percentage change

The average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.

CPI excluding interest rates on mortgage bonds (CPIX)

The CPI excluding interest rates on mortgage bonds (CPIX) is derived by excluding the interest rates on mortgage bonds from the basket of goods and services, which is used to compile the Consumer Price Index.

In other countries in the world such as New Zealand, Sweden and Australia, which adopted inflation targeting, different measures of the inflation rate have been derived and applied such as the Core index, and the CPI excluding interest rates on mortgage bonds. Stats SA has accordingly calculated these measures and the CPI excluding interest rates on mortgage bonds CPIX, is included in this release..

CPI for administered prices

An administered price is defined as the price of a product, which is set consciously by an individual producer or group of producers and/or any price, which can be determined or influenced by government, either directly, or through one or other government agencies/institutions without reference to market forces.

CPI for regulated prices

Regulated prices are those administered prices that are said to be monitored and controlled by government policy. To this end, price regulation does not necessarily imply the presence of an economic regulator, but the restriction on the extent to which prices may vary, depending on government's policy objective.

Core inflation

The primary objective of calculating core inflation is to capture the underlying inflation pressures in the economy, i.e. the trend in the general price level which reflects the balance between aggregate demand and supply in the economy over the medium term. Core inflation is a measure designed in relation to the specific structure of a country's economy. Hence in the South African context, core inflation is derived by the change in the Core index of the relevant month of the current year compared with the Core index of the same month in the previous year expressed as a percentage.

Core index

The core index is derived by exclusions from the CPI on the basis that changes in their prices are policy.

Exclusions from the CPI to obtain the core index, and the reasons for exclusion are as follows –

- Fresh and frozen meat and fish: Prices may be highly volatile, particularly during and following periods of drought.
- Fresh and frozen vegetables and fresh fruit and nuts: Prices may be highly volatile from month to month due to their sensitivity to climatic conditions.
- Interest rates on mortgage bonds and overdrafts/personal loans: These are
 excluded due to their "perverse" effect on the CPI. A tightening in monetary policy
 to counter inflation pressures would cause interest rates to rise and be reflected in
 the interest cost component of measured inflation. This, in turn, could provoke a
 further tightening of monetary policy resulting in excessive movements in the
 inflation rate.
- Changes in VAT (Value Added Tax): VAT is predominantly determined by government (fiscal policy).
- Assessment rates: These taxes are predominantly determined by local government.

Establishment

An establishment (branch) is the smallest economic unit that functions as a separate entity.

Indicator products

Indicator products are those products or services that were selected in the basket, which is used to compile the Consumer Price Index.

Inflation rate

Inflation rate is the annual percentage change in the CPI for all items of the relevant month of the current year compared with the CPI for all items of the same month in the previous year expressed as a percentage.

Metropolitan area

Metropolitan areas in the CPI refer to the following 12 metropolitan areas used in the compilation of the CPI –

- Cape Peninsula
- Port Elizabeth/Uitenhage
- East London
- Kimberley
- Bloemfontein
- Free State Goldfields
- Durban/Pinetown
- Pietermaritzburg
- Pretoria/Centurion/Akasia
- Witwatersrand
- Nelspruit/Witbank
- Polokwane

Initially 12 metropolitan areas were selected, based on the population figures as well as the size of the economic activity in these areas. However, when the 9 provinces were introduced, the Vaal Triangle metropolitan area was included partially (VanderBiljpark and Vereeniging) in the other urban areas of Gauteng and partially (Sasolburg) in the other urban areas of the Free State. Due to the fact that there were no metropolitan areas in the Limpopo Province and Mpumalanga, the main urban areas and Nelspruit/Witbank in each of these provinces were selected as metropolitan areas. As from 2002 the Klerksdorp/Orkney/Stilfontein area is included under other urban areas as the coverage in the IES was not comprehensive enough to determine a weighting structure for this area.

Monthly percentage change

The monthly percentage change is the change in the CPI of the relevant month compared to the CPI of the previous month expressed as a percentage.

Weights

The weights are the relevant importance of the indicator product. The weight of a product is calculated by dividing the total expenditure by households on that product by the total expenditure on all goods and services by households.

FOR MORE INFORMATION

Stats SA publishes approximately 300 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Advance release calendar

An advance release calendar is disseminated on http://www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available in the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division National Library of South Africa, Cape Town Division

Natal Society Library, Pietermaritzburg

Library of Parliament, Cape Town

Bloemfontein Public Library

Johannesburg Public Library

Eastern Cape Library Services, King William's Town

Central Regional Library, Polokwane

Central Reference Library, Nelspruit

Central Reference Collection, Kimberley

Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.
