## KEY FIGURES AS AT DECEMBER 2010

### Producer Price Index and rates of change according to main components

**Base: 2000 = 100**

Producer Price Index components	Indices			Percentage change between	
	Dec 2009	Nov 2010	Dec 2010	Nov 2010 and Dec 2010	Dec 2009 and Dec 2010
Domestic output	182,5	192,5	193,0	+0,3	+5,8
Exported commodities	157,5	166,5	166,9	+0,2	+6,0
Imported commodities	151,0	150,5	152,1	+1,1	+0,7

### KEY FINDINGS AS AT DECEMBER 2010

**The annual percentage change in the PPI was +5,8% in December 2010 (i.e. the PPI in December 2010 compared with December 2009).**

The Producer Price Index (PPI) for domestic output shows an annual rate of change of +5,8% in December 2010 (i.e. the PPI in December 2010 compared with December 2009). This rate is 0,4 of a percentage point lower than the corresponding annual rate of +6,2% in November 2010 (see Table 1(A), p.6). This lower annual rate in December 2010 can be explained by decreases in the annual rate of change in the Producer Price Indices for:

- Mining and quarrying: the annual rate decreased from +12,6% in November 2010 to +10,7% in December 2010.
- Products of petroleum and coal: the annual rate decreased from +5,6% in November 2010 to +3,0% in December 2010.
- Rubber and plastic products: the annual rate decreased from +2,0% in November 2010 to +1,9% in December 2010.

These decreases were partially counteracted by increases in the annual rate of change for:

- Food at manufacturing: the annual rate increased from +0,6% in November 2010 to +1,1% in December 2010.
- Other manufactures: the annual rate increased from +7,1% in November 2010 to +10,1% in December 2010.

**From November 2010 to December 2010 the PPI for domestic output increased by 0,3%.**

The monthly increase of 0,3% in the PPI for domestic output was mainly due to monthly contributions from increases in the price indices of agriculture (+0,2 of a percentage point), products of petroleum and coal (+0,1 of a percentage point) and other manufactures (+0,1 of a percentage point). These increases were partially counteracted by a decrease in the price index of metal products (-0,1 of a percentage point) (see Table 3, p.7).

**The PPI for exported commodities shows an annual rate of change of +6,0% in December 2010 (i.e. the PPI in December 2010 compared with December 2009). This rate is 0,2 of a percentage point lower than the corresponding annual rate of +6,2% in November 2010 (see Table 1(B), p.6).**

The annual increase of 6,0% in the PPI for exported commodities was mainly due to annual contributions from increases in the price indices of mining and quarrying (+4,2 percentage points), basic metals (+2,2 percentage points), paper and paper products (+0,2 of a percentage point) and all other groups (+0,1 of a percentage point). These increases were partially counteracted by decreases in the price indices of food at manufacturing (-0,3 of a percentage point), chemicals and chemical products (-0,2 of a percentage point), agriculture (-0,1 of a percentage point) and radio, television and communication equipment and apparatus (-0,1 of a percentage point) (see Table 4, p.8).

**From November 2010 to December 2010 the PPI for exported commodities increased by 0,2%.**

The monthly increase of 0,2% in the PPI for exported commodities was mainly due to monthly contributions from increases in the price indices of mining and quarrying (+0,2 of a percentage point) and basic metals (+0,1 of a percentage point). These increases were partially counteracted by a decrease in the price index of all other groups (-0,1 of a percentage point) (see Table 5, p.8).

**The PPI for imported commodities shows an annual rate of change of +0,7% in December 2010 (i.e. the PPI in December 2010 compared with December 2009). This rate is 0,2 of a percentage point higher than the corresponding annual rate of +0,5% in November 2010 (see Table 1(C), p.6).**

The annual increase of 0,7% in the PPI for imported commodities was mainly due to annual contributions from increases in the price indices of mining and quarrying (+1,3 percentage points), agriculture (+0,1 of a percentage point), basic metals (+0,1 of a percentage point) and office, accounting and computing machinery (+0,1 of a percentage point). These increases were partially counteracted by decreases in the price indices of non-electrical machinery and equipment (-0,3 of a percentage point), radio, television and communication equipment and apparatus (-0,2 of a percentage point), all other groups (-0,2 of a percentage point), paper and paper products (-0,1 of a percentage point) and metal products (-0,1 of a percentage point) (see Table 6, p.9).

**From November 2010 to December 2010 the PPI for imported commodities increased by 1,1%.**

The monthly increase of 1,1% in the PPI for imported commodities was mainly due to a monthly contribution from an increase in the price index of mining and quarrying (+1,2 percentage points). This increase was partially counteracted by a decrease in the price index of office, accounting and computing machinery (-0,1 of a percentage point) (see Table 7, p.9).

## KEY FIGURES FOR THE YEAR 2010

### Average Producer Price Index (PPI) for the 12 months January to December 2010

**Base: 2000 = 100**

Producer Price Index components	Average Indices		% change 2010
	2009	2010	
Domestic Output	180,7	191,6	+6,0
Exported commodities	158,6	164,1	+3,5
Imported commodities	146,2	150,6	+3,0

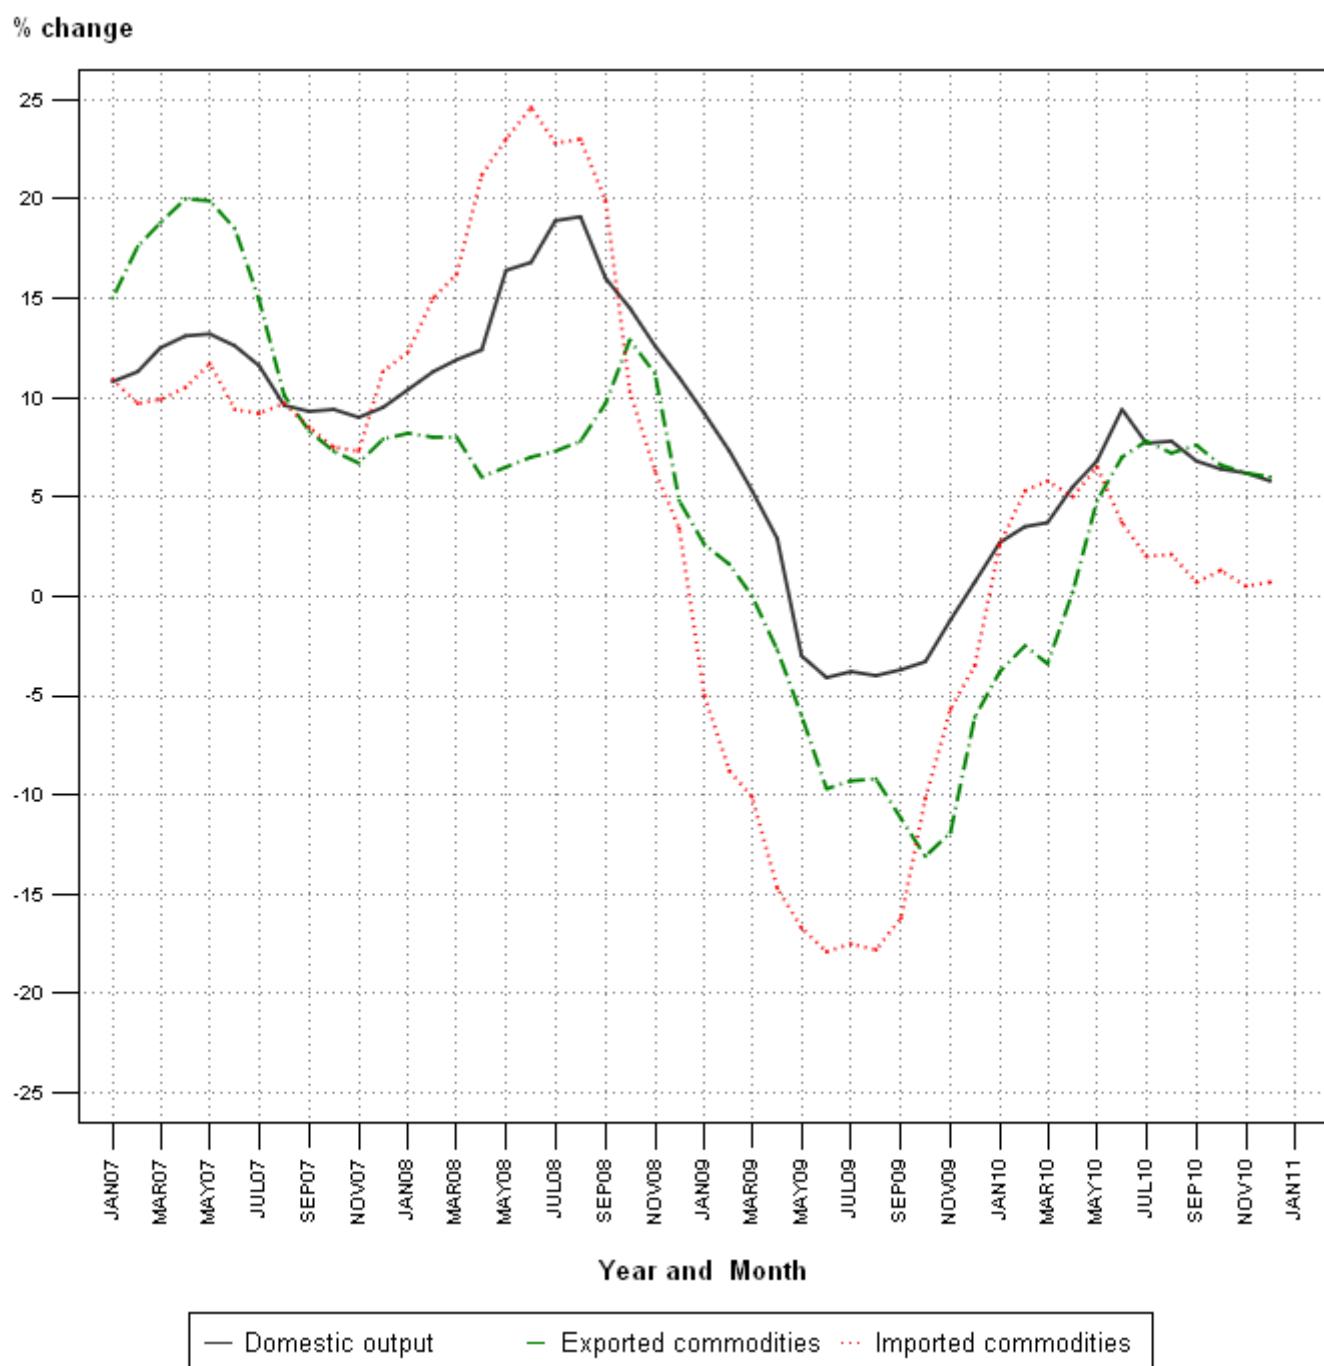

## KEY FINDINGS FOR CALENDAR 2010

**Average annual producer price inflation for domestic output (+6,0%), exported commodities (+3,5%) and imported commodities (+3,0%) in 2010.**

In 2010 the average PPI for domestic output was 6,0% higher than in 2009. This compares with an annual decrease of 0,1% in the average PPI (domestic output) in 2009 compared with 2008.

In 2010 the average PPI for exported commodities was 3,5% higher than in 2009. This compares with an annual decrease of 6,4% in the average PPI (exported commodities) in 2009 compared with 2008.

In 2010 the average PPI for imported commodities was 3,0% higher than in 2009. This compares with an annual decrease of 12,3% in the average PPI (imported commodities) in 2009 compared with 2008.

**Purpose of the survey**

The surveys of prices of commodities in domestic output (including exports), imported commodities, and exported commodities are monthly surveys covering samples of manufacturers, importers and exporters in the South African economy. The results of the survey are used to compile the Producer Price Index (PPI) which indicates changes in Producer prices of locally produced commodities (including exports), imports and exports. These statistics are used by the private sector for contract price adjustments, and as a deflator in the compilation of national accounts.

**Rebasing**

The base year of the Producer Price Index (PPI) is still 2000 = 100. For historical rebasing see the statistical release P0142.4.

**Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF)**

South Africa's data dissemination practices are assessed against the IMF's Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF's Dissemination Standards Bulletin Board on the internet at <http://dsbb.imf.org>. The SDDS prescribes two to four monitorable elements or good practice that can be observed, or monitored, by users of statistics. These include coverage, periodicity and timeliness, and access to a scheduled release calendar. The SDDS in essence sets standards for the disclosure and transparency of statistics.

South Africa subscribed to the SDDS in 2 August 1996 and posted its metadata as of 27 September 1996. South Africa has met the SDDS specifications for the coverage, periodicity and timeliness of the data, and for the dissemination of advanced release calendars since 18 September 2000.

Stats SA is responsible for compiling and disseminating data on the producer price index, national accounts, government accounts, industry-based statistics, social statistics, the producer price index, consumer price index, labour market and population statistics.

**Reports on Observance of Standards and Codes (ROSC) of the International Monetary Fund (IMF)**

The IMF has worked on producing ROSC as a step to strengthen the international financial system. The objectives of ROSC include the promotion of increased transparency, and the implementation of internationally accepted standards and codes.

The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for the data. The ROSC is complemented by an assessment of the quality of the Producer Price Index, using the Data Quality Assessment Framework (DQAF) as developed by the IMF's Statistics Department.

The DQAF assess data quality in terms of -

- Prerequisites of quality;
- Integrity;
- Methodological soundness;
- Accuracy and reliability;
- Serviceability; and
- Accessibility

For South Africa's compliance and performance on the quality of data see <http://www.imf.org/external/np/rosc/rosc.asp>.

**Methodological notes** Stats SA released a new re-weighted PPI in January 2008 using a revised basket of indicator products.

The new basket of indicator products for locally produced commodities, import and export commodities was compiled through use of several information sources. The information sources used to select relevant indicator products in the different industries are indicated in table A.

**Table A – Information sources used to select products in different producer industries**

Main products and industries	Sources
<b>Locally produced items</b>	
Agriculture	Stats SA, Census of Agriculture, 2005
Fishing	Fishing Industry Handbook, 2005
Forestry	Commercial Timber Resources and Roundwood Processing in South Africa, 2005
Mining and quarrying	Department of Mineral Resources
Manufacturing	Stats SA, Large Sample Survey, 2005
Electricity	Stats SA, Department Energy
Gas	Stats SA, Economic Activity Survey, 2005
Water	Department of Water Affairs
<b>Imported items</b>	South African Revenue Services
<b>Exported items</b>	South African Revenue Services

The products were classified according to the relevant Central Product Classification (CPC) and at industry level were classified using Standard Industrial Classification (SIC) subgroups. At industry level, value added was used to determine industry weights. At product level, the products in each subgroup were sorted according to their value of sales. The products contributing to the top 80% of the sales in each subgroup were selected as indicator products. These are the products for which prices will be monitored periodically by Stats SA.

The questionnaire(s) for each subgroup, which are used to collect the relevant price information from respondents, were adjusted to include the newly selected indicator products. Although the products on each questionnaire differ from the other questionnaires, their layout is identical.

For each indicator product a sample of manufacturers, importers and exporters was drawn from all the manufacturers, importers and exporters who manufacture, import or export the specific indicator product. The list of manufacturers, importers and exporters (sampling frame), from which the samples were drawn, are indicated in table B.

**Table B – Sampling frame**

Main products and industries	Sources
<b>Locally produced and sold products</b>	
Agriculture	List of fresh produce markets
Mining and quarrying	List of mines
Forestry	List obtained from Department Agriculture, Forestry and Fishing Old sample of PPI
Fishing	Old sample of PPI List obtained from other sources
Manufacturing	List of manufacturers from Stats SA, Large Sample Survey, 2005 List of manufactures from Stats SA, Business Register List of producers from industry associations
Electricity and gas	List of producers according to Stats SA, Economic Activity Survey
Water	Old sample of PPI List obtained from Department of Water Affairs List of importers obtained from South African Revenue Services
<b>Imported products</b>	
<b>Exported products</b>	List of exporters obtained from South African Revenue Services

## ADDITIONAL INFORMATION

### EXPLANATORY NOTES

- Introduction**
- 1 This publication contains results of monthly surveys of prices of locally produced commodities (including exports), imported and exported commodities. The price indices are calculated at base 2000=100.
- Scope of the PPI survey**
- 2 The indices are compiled on a gross industry basis, i.e. each index relates to those articles, which are produced, imported and exported by the designated industries of the South African economy. Selling prices are collected from manufacturers, importers and exporters.
- Classification**
- 3 The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth edition, Report No. 09-90-02 was used to classify the industries in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. The Central Product Classification (CPC) Version 1.1, Series M No 77 was used to classify the products in the survey.
  - 4 This publication presents information, which measures changes in prices of products, which are produced, imported or exported by establishments.
- Statistical unit**
- 5 The statistical unit is the establishment (branch), which is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry according to the classification of the products that the unit manufactures, imports or exports.
- Survey methodology and design**
- 6 Different phases of sampling take place. Firstly, a sample of products, based on the information collected through the Large Sample Survey of 2005 and 2005 information on imports and exports received from SARS is designed and drawn. An indicator product is selected purposively within each product group. To be selected, a product should be part of the top 80% of products manufactured, imported or exported in that product group. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- This survey is collected by mail from a sample of approximately 2 325 manufacturers, 2 325 exporters and 2 325 importers. The indices are based on producer prices at the point of Producer in the case of commodities produced in South Africa, and "ex-warehouse", in the case of imported commodities. Prices "delivered" or "free on rail" are accepted if this is the normal basis of quotation.
- Currently, an average of 13 000 price quotations are collected each month from approximately 2 700 outlets by means of 1 500 distinct questionnaires.
- Pricing basis**
- 7 Price information refers to the first seven days of the relevant month, except in the case of mining and most of the agricultural products, where it refers to the average price for the month. The average price of imported crude petroleum, used in the compilation of the import component of the PPI, is calculated as the value (in Rands) divided by the quantity of imported crude petroleum for the relevant month. **The prices of all items exclude Value Added Tax (VAT).**

**Weighting basis**

- 8 The index is a fixed weight index as the weights are determined in the base period and they do not change until the next base period. The commodities directly represented in the index, were selected on the basis of the values of sales of products –
- produced during 2005 for locally produced commodities;
  - exported during 2005; and
  - imported during 2005.

These commodities constitute approximately 80 per cent of the total value of Producer/imports/exports during the relevant year as indicated above. Weights were allocated to each product in accordance with the value of sales for each item during the 2004/05 financial year. The basis on which the weighting structure of each main PPI component, indicated in the tables published in this statistical release, was calculated, is indicated in table C.

**Table C– Basis on which the weighting structure of each PPI table is based**

<b>Number of table in this statistical release</b>	<b>PPI component</b>	<b>Basis for weighting structure</b>
Table 8	Domestic output of South African industry groups	Sales value of South African Producer (Weighted using the National Accounts value added weights)
Table 9	Exported commodities	Sales value of exported commodities
Table 10	Imported commodities	Sales value of imported commodities
Table 11	Materials used in certain industries	Quantity values of materials used

**Processing of price information**

- 9 The prices that are quoted for the different products are checked. If the price difference between two successive periods is outside the specified range of increase (+10%) or decreases (-5%), the current price levels are confirmed with relevant respondents.

**Calculating product price indices**

- 10 Price relatives are calculated for each product per respondent by dividing the current prices by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then applied to the product index for the previous month in order to obtain a product index for the relevant month.

**Calculating group price indices**

- 11 Group price indices are calculated by weighting product indices with the relevant product weight, according to each group's (local, import, export) weighting structure, using the Laspeyres index formula.

**Contributions of specific products to the total PPI**

- 12 The monthly (annual) contribution of a specific product or group of products to the total PPI is calculated by multiplying the weight of this product or group of products with the monthly (annual) change in the index for this product or group of products, divided by the index for 'All groups', for the previous month (year).

<b>Price indices for diesel</b>	<b>13</b>	The price index for diesel (Coast and Witwatersrand) is based on the refinery prices of diesel. The retail price index for diesel (metropolitan and other urban areas) is based on retail prices obtained from a sample of 84 retail outlets throughout the country. The diesel indices for the different areas are weighted according to the diesel volume distribution as obtained from the South African Petroleum Industry Association (SAPIA). The retail price index for diesel (metropolitan areas) is based on retail prices obtained from a sample of only 48 outlets in the historical metropolitan areas of the CPI. The diesel indices for the different areas are weighted according to the diesel volume distribution in the relevant areas as obtained from the South African Petroleum Industry Association (SAPIA).										
<b>Reliability of estimates</b>	<b>14</b>	The price index for diesel at wholesale level (coast and Witwatersrand) is based on the regulated wholesale prices of diesel.										
<b>Related publications</b>	<b>15</b>	Inaccuracies may occur because of imperfections in reporting by establishment (branch) and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.										
<b>Unpublished statistics</b>	<b>16</b>	Users may also wish to refer to the following publications, which are available from Stats SA - <ul style="list-style-type: none"> <li>• Bulletin of Statistics; and</li> <li>• SA Statistics.</li> </ul> In some cases, Stats SA can also make available information, which is not published. This information can be made available in one or more of the following ways: computer printout, diskette or CD. Generally a fee is levied for providing unpublished information.

## GLOSSARY

<b>Annual percentage change</b>	The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage and is generally accepted as the yardstick of PPI inflation.
<b>Overall average annual percentage change</b>	The overall average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.
<b>Contribution of specific products to the total PPI</b>	The monthly (annual) contribution of a specific product or group of products to the total PPI is calculated by multiplying the weight of the index with the monthly annual change of the index divided by the index for "All Items".
<b>Establishment</b>	An establishment (branch) is the smallest economic unit that functions as a separate entity.
<b>Indicator products</b>	Indicator products are those products whose sale values represent 80% of the total value of sales (turnover) in an industrial subgroup.
<b>Monthly percentage change</b>	The monthly percentage change is the change in the index of the relevant month compared to the index of the previous month expressed as a percentage.
<b>Weights</b>	The weights show the relative importance of the indicator products in the subgroup. The weight of a product is calculated by dividing the actual value of sales of the relevant indicator product by the total value of sales in that subgroup.

## FOR MORE INFORMATION

Stats SA publishes approximately 300 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

### Advance release calendar

An advance release calendar is disseminated on [www.statssa.gov.za](http://www.statssa.gov.za)

### Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Nelspruit  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

### Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/ 4892/8496/8095.

You can visit us on the Internet at: [www.statssa.gov.za](http://www.statssa.gov.za)
