KEY FIGURES AS AT SEPTEMBER 2007

Production Price Index and rates of change according to main components

Base: 2000 = 100

| Production Price Index components | indices | | | Percentage change between | |
|---|----------|----------|----------|---------------------------|-----------------------|
| | Sep 2006 | Aug 2007 | Sep 2007 | Aug 2007 and Sep 2007 | Sep 2006 and Sep 2007 |
| All commodities for consumption in South Africa | 144,5 | 159,2 | 158,1 | -0,7 | +9,4 |
| --Locally produced commodities | 147,7 | 163,9 | 162,0 | -1,2 | +9,7 |
| --Imported commodities | 135,4 | 145,9 | 146,9 | +0,7 | +8,5 |
| Output of South African Industry | | | | | |
| --Total output | 147,2 | 162,5 | 160,9 | -1,0 | +9,3 |
| --For South African consumption | 147,7 | 163,9 | 162,0 | -1,2 | +9,7 |

KEY FINDINGS AS AT SEPTEMBER 2007

The annual percentage change in the PPI remained unchanged at +9,4% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006).

The Production Price Index (PPI) for all commodities for consumption in South Africa shows an annual rate of change of 9,4% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006). This rate of 9,4% is the same as at August 2007 (i.e. the PPI at August 2007 compared with that at August 2006) (see table 1A, p.10). The annual rate of change at September 2007 could be explained by increases in the annual rates of change in the production price indices for:

- *Agricultural products, of which the rate increased from + 25,1% at August 2007 to + 26,1% at September 2007.*
- *Food at manufacturing, of which the rate increased from + 15,4% at August 2007 to + 16,0% at September 2007.*
- *Electricity, of which the rate increased from + 5,9% at August 2007 to + 6,3% at September 2007.*
- *Furniture, of which the rate increased from + 5,0% at August 2007 to + 5,1% at September 2007.*
- *Wearing apparel, of which the rate increased from + 2,0% at August 2007 to + 3,0% at September 2007.*
- *Radio, TV, communication equipment and apparatus, of which the rate increased from + 2,2% at August 2007 to + 2,3% at September 2007.*

However, these increases were counteracted by decreases in the annual rate of change for:

- *Mining and quarrying products, of which the rate decreased from + 10,9% at August 2007 to +7,9% at September 2007.*
- *Basic metals, of which the rate decreased from + 10,3% at August 2007 to + 8,8% at September 2007.*
- *Non-electrical machinery and equipment, of which the rate decreased from + 6,5% at August 2007 to + 5,9% at September 2007.*

From August 2007 to September 2007 the PPI for all commodities for consumption in South Africa decreased by 0,7%.

The annual increase of 9,4% in the PPI for all commodities for consumption in South Africa is due to annual increases in the price indices for locally produced commodities (+ 7,2 percentage points) and for imported commodities (+ 2,2 percentage points) (see table 2, p.10).

The annual percentage change in the PPI for locally produced commodities for consumption in South Africa is higher at +9,7% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006).

The annual rate of increase in the PPI for locally produced commodities for consumption in South Africa is 9,7% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006), which is 0,4 of a percentage point higher than the corresponding annual rate of 9,3% at August 2007 (i.e. the PPI at August 2007 compared with that at August 2006) (see table 1B p.10).

From August 2007 to September 2007 the PPI for locally produced commodities for consumption in South Africa decreased by 1,2%.

The annual increase of 9,7% in the PPI for locally produced commodities for consumption in South Africa is mainly due to relatively large annual increases in the price indices for agricultural products (+ 2,5 percentage points), food at manufacturing (+ 2,0 percentage points), paper, paper products and printing (+ 0,7 of a percentage point), chemicals and chemical products (+ 0,6 of a percentage point), electrical machinery and apparatus (+ 0,4 of a percentage point), beverages (+ 0,3 of a percentage point), tobacco products (+ 0,3 of a percentage point), products of petroleum and coal (+ 0,3 of a percentage point), rubber and plastic products (+ 0,3 of a percentage point), basic metals (+ 0,3 of a percentage point), metal products (+ 0,3 of a percentage point) and electricity (+ 0,3 of a percentage point) (see table 6, p.12).

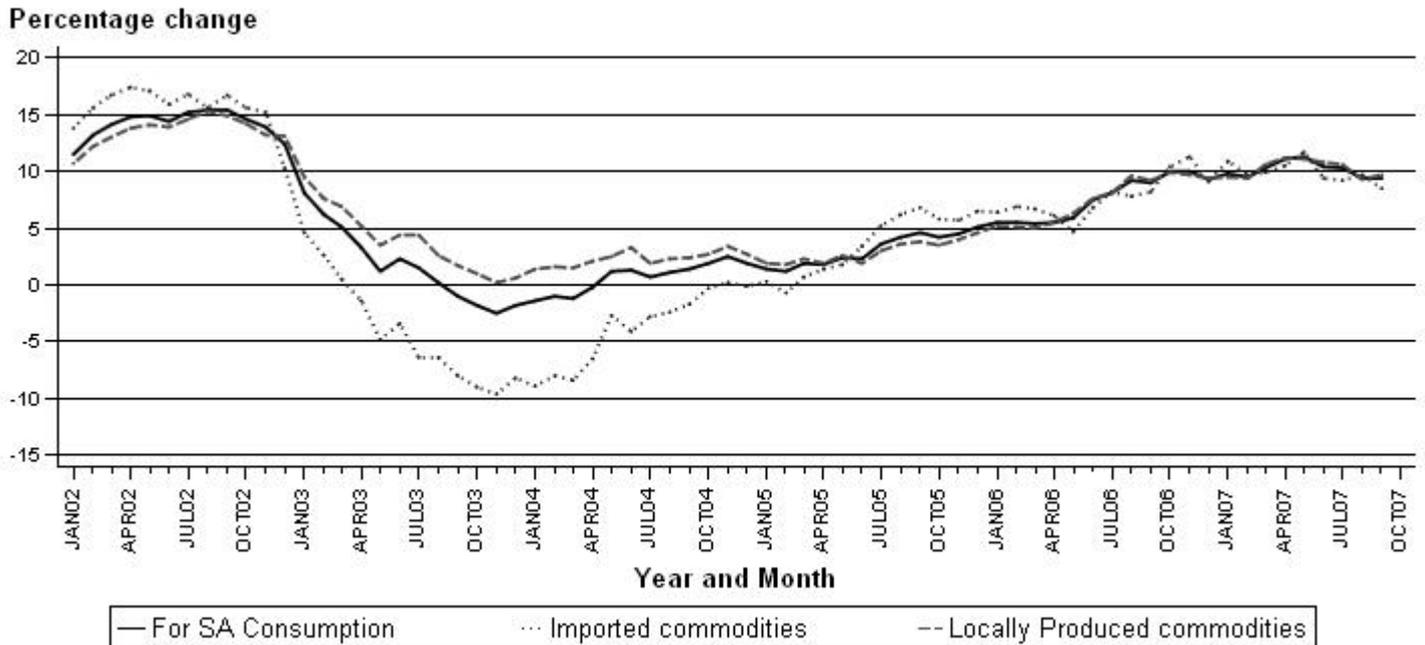

The annual rate of change in the PPI for imported commodities is lower at +8,5% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006).

The PPI for imported commodities shows an annual rate of increase of 8,5% at September 2007 (i.e. the PPI at September 2007 compared with that at September 2006). This rate is 1,2 percentage points lower than the corresponding annual rate of 9,7% at August 2007 (i.e. the PPI at August 2007 compared with that at August 2006) (see table 1C, p.10).

From August 2007 to September 2007 the PPI for imported commodities increased by 0,7%.

The annual increase of 8,5% in the PPI for imported commodities is mainly due to relatively large annual increases in the price indices for mining and quarrying products (+ 2,0 percentage points), chemicals and chemical products (+ 1,0 percentage points), transport equipment (+ 1,0 percentage points), non-electrical machinery and equipment (+ 0,9 of a percentage point), food at manufacturing (+ 0,8 of a percentage point), agricultural products (+ 0,7 of a percentage point) and basic metals (+ 0,7 of a percentage point) (see table 8, p.13).

Figure 1 – Annual percentage change in the Production Price Index: Commodities for South African consumption

Source: Stats SA

PPI for all commodities for South African consumption

The monthly decrease of 0,7% in the PPI for all commodities for consumption in South Africa is due to a monthly decrease in the price index for locally produced commodities (- 0,9 of a percentage point) and a monthly increase in the price index for imported commodities (+ 0,2 of a percentage point) (see table 3, p.10).

PPI for locally produced commodities for consumption in South Africa

The PPI for locally produced commodities for consumption in South Africa decreased by 1,2% from August 2007 to September 2007. Monthly decreases occurred in the price indices for electricity (- 1,6 percentage points), products of petroleum and coal (- 0,1 of a percentage point) and basic metals (- 0,1 of a percentage point). These decreases were slightly counteracted by increases in the price indices for agricultural products (+ 0,3 of a percentage point) and food at manufacturing (+ 0,3 of a percentage point) (see table 7, p.12).

PPI for imported commodities

The PPI for imported commodities increased by 0,7% from August 2007 to September 2007. Monthly increases occurred in the price indices for agricultural products (+ 0,3 of a percentage point), food at manufacturing (+ 0,2 of a percentage point), chemicals and chemical products (+ 0,2 of a percentage point) and non-electrical machinery and equipment (+ 0,1 of a percentage point). These increases were slightly counteracted by a decrease in the price index for mining and quarrying (- 0,1 of a percentage point) (see table 9, p.13).

Monthly changes in the PPI for all commodities for South African consumption

Relatively large monthly decreases occurred in the price indices for electricity (- 27,4%), fishing (- 3,2%), products of petroleum and coal (- 1,5%), basic metals (- 1,2%), mining and quarrying products (- 0,4%) and medical, precision and optical instruments (- 0,2%). These decreases were slightly counteracted by increases in the prices indices for agricultural products (+ 3,2%), food at manufacturing (+ 1,9%), wearing apparel (+ 1,5%), office, accounting and computing machinery (+ 0,8%), textile and made-up goods (+ 0,7%), chemicals and chemical products (+ 0,5%), wood and wood products (+ 0,4%) and gas, steam and water (+ 0,4%) (see table 10, p.14 and 15).

Monthly changes in the PPI for imported commodities

Relatively large monthly increases occurred in the price indices for agricultural products (+ 10,3%), food at manufacturing (+ 3,3%), wood and wood products (+ 2,9%), chemicals and chemical products (+ 1,2%), textiles and made-up goods (+ 0,8%), office, accounting and computing machinery (+ 0,7%), basic metals (+ 0,5%), non-electrical machinery and equipment (+ 0,4%), paper, paper products and printing (+ 0,3%), rubber and plastic products (+ 0,3%) and other manufacturers (+ 0,3%). These monthly increases were counteracted by slightly monthly decreases in the price indices for mining and quarrying (- 0,5%) and medical, precision and optical instruments (- 0,3%) (see table 13, p.20 and 21).

Monthly changes in the PPI for exported commodities

Relatively large monthly decreases occurred in the price indices for exported agricultural products (- 2,8%), basic metals (- 2,7%) and fishing (- 2,2%). These monthly decreases were counteracted by large monthly increases in the price indices for products of petroleum and coal (+ 4,5%), mining and quarrying (+ 1,5%), food at manufacturing (+ 1,1%), textiles and made-up goods (+ 0,3%) and non-metallic mineral products (+ 0,3%) (see table 14, p.22 and 23).

| Forthcoming issues | Issue | Expected date of publication |
|--|--|-------------------------------------|
| | October 2007 | 29 November 2007 |
| | November 2007 | 20 December 2007 |
| | December 2007 | 31 January 2008 |
| | January 2008 | 28 February 2008 |
| | February 2008 | 27 March 2008 |
| | March 2008 | 24 April 2008 |
| Purpose of the survey | <p>The Surveys of Prices of Locally Produced commodities (which are locally sold or exported) and Imported Commodities are monthly surveys covering samples of manufacturers, exporters and importers operating in the South African economy. The results of the survey are used to compile the Production Price Index (PPI), an economic indicator, which indicates the changes in production prices of locally produced commodities (which are locally sold or exported) and imported commodities. These statistics are used by the private sector in the analysis of comparative business and industry performance, as well as for contract price adjustments.</p> | |
| Rebasing the PPI from 1995=100 to 2000=100 | <p>Following international practice, the base year of the Production Price Index (PPI) has been changed from 1995 =100 to 2000 =100 with effect from February 2001. For more information see the statistical release P0142.4 for the historical figures.</p> | |
| Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF) | <p>South Africa's data dissemination practices are assessed against the IMF's Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF's Dissemination Standards Bulletin Board on the internet at http://dsbb.imf.org. This is a "best practice" standard. It covers four sectors of the economy i.e. the real, fiscal, financial and external sectors, as well as population and identifies four dimensions i.e. data, access, integrity and quality, of data dissemination. For each of these dimensions, the SDDS prescribes two to four monitorable elements or good practices that can be observed, or monitored, by users of statistics. However, the IMF's monitoring of the SDDS as authorised by the IMF's Board of Executive Directors is limited to the dimensions of data i.e. coverage, periodicity and timeliness, and access i.e. advanced release calendar. It should also be noted that the SDDS is a disclosure standard, i.e. it focuses on encouraging the authorities to provide information to users, including information that will enable users to assess the data.</p> <p>The four institutions responsible for the compilation and dissemination of the SDDS prescribed data categories are National Treasury, the South African Revenue Services (SARS), the South African Reserve Bank (SARB) and Statistics South Africa (Stats SA).</p> <p>National Treasury is responsible for compiling and disseminating data on the national budget (budgetary central government operations). SARS is responsible for compiling and disseminating of data on international merchandise trade.</p> <p>The SARB is responsible for compiling and disseminating, the analytical accounts of the banking sector, the analytical accounts of the central bank, central government debt, interest rate, exchange rates, share price indices, balance of payments, the international investment position, international reserves and foreign currency liquidity.</p> <p>Stats SA is responsible for compiling and disseminating data on the production index, national accounts, government accounts, industry – based statistics, social statistics, the production price index, consumer price index, labour market and population statistics.</p> <p>South Africa has subscribed to the SDDS since 2 August 1996 and started posting its metadata on 27 September 1996. South Africa met the SDDS specifications for the coverage, periodicity and timeliness of the data, and for the dissemination of advanced release calendars on 18 September 2000. The National Summary Data Page has been hyperlinked since 24 April 1997 and the Data Template on International Reserves and Foreign Currency Liquidity was disseminated on 1 September 2000. South Africa is the only subscriber to the SDDS from the African continent.</p> | |

**Reports on
Observance of
Standards and
Codes (ROSC)
of the
International
Monetary Fund
(IMF)**

The IMF has been working actively on producing Reports on Observance of Standards and Codes (ROSC) as a step to strengthen the architecture of the international financial system. The objectives of the ROSC include the promotion of increased transparency and encouragement of implementation of internationally accepted standards and codes. One of the ROSC components is the data dissemination module, which falls under the responsibility of the IMF's Statistics Department (STA). In this module, a country is assessed according to the SDDS.

The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for these categories. It is complemented by an assessment of the quality of the Production Price Index, using the Data Quality Assessment Framework (DQAF) developed by the IMF's Statistics Department.

The DQAF undertakes to assess data quality under the following dimensions -

- Prerequisites of quality;
- Integrity;
- Methodological soundness;
- Accuracy and reliability;
- Serviceability; and
- Accessibility

An IMF delegation visited South Africa from 7 to 18 May 2001 and produced a data ROSC for South Africa. This ROSC indicates to which extent South Africa has observed the IMF's requirements and is available at <http://www.imf.org/external/np/rosc/rosc.asp>.

**Methodological
notes**

According to international best practice, the PPI is reweighted every five years. Stats SA reweighted the PPI as from June 1999 using a new basket of indicator products and their relevant weights.

The new baskets of indicator products manufactured and sold locally, exported and imported were compiled through various information sources. The information sources used to select the relevant indicator products in the different production industries are indicated in table A.

Table A – Information sources used to select products in the different production industries

| Main products and industries | Sources |
|--|--|
| Locally produced and sold items | |
| Agriculture | Department of Agriculture |
| Fishing | Fishing Handbook, 1996 |
| Forestry | Commercial Timber Resources and Roundwood Processing in South Africa, 1996 |
| Mining and quarrying | Department of Minerals and Energy Affairs |
| Manufacturing | Stats SA, Census of Manufacturing, 1996 |
| Electricity, gas and steam | Stats SA, Census of Electricity, Gas and Steam, 1995 |
| Water | Department of Water Affairs and Forestry |
| Imported items | South African Revenue Services |
| Exported items | South African Revenue Services |

The products were classified according to the relevant Standard Industrial Classification (SIC) subgroups. The products in each subgroup were then sorted according to their value of sales. The products contributing to the top 80% of the sales in each subgroup were selected as indicator products. These are the products for which prices will be monitored periodically by Stats SA.

The questionnaire(s) for each subgroup, which are used to collect the relevant price information from respondents, were adjusted to include the newly selected indicator products. Although the products on each questionnaire differ from the other questionnaires, their layout is identical.

For each indicator product a sample of manufacturers, importers and exporters was drawn from all the manufacturers, importers and exporters who manufacture, import or export the specific indicator product. The list of manufacturers, importers and exporters (sampling frame), from which the samples were drawn, are indicated in table B.

Table B – Sampling frame

| Main products and industries | Sources |
|---|--|
| Locally produced and sold products | |
| Agriculture | List of fresh produce markets |
| Mining and quarrying | List of mines |
| Forestry | List obtained from Department of Agriculture Old sample of PPI |
| Fishing | Old sample of PPI List obtained from other sources |
| Manufacturing | List of manufacturers from the Census of Manufacturing, 1996 List of manufactures from trade unions |
| Electricity, gas and steam | List of producers according to the Census Of Electricity, Gas and Steam, 1995 |
| Water | Old sample of PPI. |
| Imported products | List of importers obtained from South African Revenue Services |
| Exported items | List of exporters obtained from South African Revenue Services |

ADDITIONAL INFORMATION

EXPLANATORY NOTES

- Introduction** 1 This publication contains results of the monthly Surveys of Prices of Locally Produced Commodities (which are locally sold or exported) and Imported Commodities. These indices for commodities are classified to designated industries of the South African economy. They are calculated on the base 2000=100.
- Scope of the PPI survey** 2 The indices are compiled on a gross industry basis, i.e. each index relates to those articles, which are produced, imported and exported by the designated industries of the South African economy. Selling prices are collected from manufacturers, importers and Exporters.
- Classification** 3 The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC subdivision level.
- 4 This publication presents information, which measures changes in prices of products, that are produced, imported or exported by establishments (branches). It excludes semi-processed products, which have been produced by the establishment within the manufacturing division and carried over to other establishments within the manufacturing division for further processing.
- Statistical unit** 5 The statistical unit is the establishment (branch), which is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry according to the classification of the products that the unit manufactures, imports or exports.
- Survey methodology and design** 6 Different phases of sampling take place. Firstly, a sample of products, based on the information collected through the Manufacturing census of 1996 and 1995/96 information on imports and exports received from Customs and Excise, SARS is designed and drawn. An indicator product is selected purposively within each product group. To be selected, a product should be part of the top 80% of products manufactured, imported or exported in that product group. Furthermore, it must be possible to obtain price quotations for the relevant product during the whole year. The sample of indicator products is revised every five years at which stage the weights of the indicator products/groups are also revised.
- This survey is collected by mail from an original sample of approximately 3 500 manufacturers, 3 500 exporters and 3 500 importers. The indices are based on producer prices at the point of production in the case of commodities produced in South Africa, and wholesale prices "ex-warehouse", in the case of imported commodities. Prices "delivered" or "free on rail" are accepted if this is the normal basis of quotation.
- Currently, an average of 20 000 price quotations are collected each month from approximately 5 500 outlets by means of 6 000 questionnaires. The indices are based on retail trade and service prices.
- Pricing basis** 7 Price information refers to the first seven days of the relevant month, except in the case of mining and most of the agricultural products, where it refers to the average price for the month. The average price of imported crude petroleum, used in the compilation of the import component of the PPI, is calculated as the value (in Rands) divided by the quantity of imported crude petroleum for the relevant month. **The prices of all items exclude Value Added Tax (VAT).**

Weighting basis

- 8 The index is a fixed weight index as the weights are determined in the base period and they do not change until the next base period. The commodities directly represented in the index, were selected on the basis of the values of sales of products –
- produced during the 1995-96 financial year for locally produced commodities;
 - exported during 1996; and
 - imported during 1996.

These commodities constitute approximately 80 per cent of the total value of production/imports/exports during the relevant year as indicated above. Weights were allocated to each product in accordance with the value of sales for each item during the 1995/96 financial year. The basis on which the weighting structure of each main PPI component, indicated in the tables published in this statistical release, was calculated, is indicated in table C.

Table C– Basis on which the weighting structure of each PPI table is based

| Number of table in this statistical release | PPI component | Basis for weighting structure |
|--|---|---|
| Table 10 | Commodities for South African consumption | Sales value of South African production minus exports, plus imports |
| Table 11 | Total output of South African industry groups | Sales value of South African production |
| Table 12 | Output of South African industry groups for South African consumption | Sales value of South African production minus exports |
| Table 13 | Imported commodities | Sales value of imported commodities |
| Table 14 | Exported commodities | Sales value of exported commodities |
| Table 15 | Materials used in certain industries | Value of materials used |

Processing of price information

- 9 The prices that are quoted for the different products are checked. If the price difference between two successive periods are outside the specified range of increase (+10%) or decreases (-5%), the current price levels are confirmed with the relevant respondents through a telephone inquiry.

Calculating product price indices

- 10 Price relatives are calculated for each product per respondent by dividing the current prices by the previously quoted price. The price relative for each product is calculated by means of the geometric mean of the price relatives for each respondent. This price relative for each product is then applied to the product index for the previous month in order to obtain a product index for the relevant month.

Calculating group price indices

- 11 Group price indices are calculated by weighting product indices with the relevant product weight, according to each group's (local, import, export) weighting structure, using the Laspeyres index formula.

Contributions of specific products to the total PPI

- 12 The monthly (annual) contribution of a specific product or group of products to the total PPI is calculated by multiplying the weight of this product or group of products with the monthly (annual) change in the index for this product or group of products, divided by the index for 'All groups'.

- Price indices for diesel** 13 The price index for diesel (Coast and Witwatersrand) is based on the refinery prices of diesel.
- The retail price index for diesel (metropolitan and other urban areas) is based on retail prices obtained from a sample of 84 retail outlets throughout the country. The diesel indices for the different areas are weighted according to the diesel volume distribution as obtained from the South African Petroleum Industry Association (SAPIA).
- The retail price index for diesel (metropolitan areas) is based on retail prices obtained from a sample of only 48 outlets in the historical metropolitan areas of the CPI. The diesel indices for the different areas are weighted according to the diesel volume distribution in the relevant areas as obtained from the South African Petroleum Industry Association (SAPIA).
- The price index for diesel at wholesale level (coast and Witwatersrand) is based on the regulated wholesale prices of diesel.
- Reliability of estimates** 14 Inaccuracies may occur because of imperfections in reporting by establishment (branch) and errors made in collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to reduce non-sampling errors to a minimum by careful designing the questionnaires, editing data and efficient operating procedures.
- Related publications** 15 Users may also wish to refer to the following publications, which are available from Stats SA -
- Bulletin of Statistics; and
 - SA Statistics.
- Unpublished statistics** 16 In some cases, Stats SA can also make available information, which is not published. This information can be made available in one or more of the following ways: computer printout, diskette or CD. Generally a fee is levied for providing unpublished information.

GLOSSARY

Annual percentage change

The annual percentage change is the change in the index of the relevant month of the current year compared with the index of the same month in the previous year expressed as a percentage and is generally accepted as the yardstick of PPI inflation.

Overall average annual percentage change

The overall average annual percentage change is the change in the average index of one year compared with the average index of the previous year expressed as a percentage.

Contribution of specific products to the total PPI

The monthly (annual) contribution of a specific product or group of products to the total PPI is calculated by multiplying the weight of the index with the monthly annual change of the index divided by the index for "All Items".

Establishment

An establishment (branch) is the smallest economic unit that functions as a separate entity.

Indicator products

Indicator products are those products whose sale value represent 80% of the total value of sales (turnover) in an industrial subgroup.

Monthly percentage change Weights

The monthly percentage change is the change in the index of the relevant month compared to the index of the previous month expressed as a percentage.

The weights are the relevant importance of the indicator products in that subgroup. The weight of a product is calculated by dividing the actual value of sales of the relevant indicator product by the total value of sales in that subgroup.

FOR MORE INFORMATION

Stats SA publishes approximately 300 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries -

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.

You can visit us on the Internet at: www.statssa.gov.za
