CENTRAL STATISTICAL SERVICE

Statistiese vrystelling
Statistical release

P0441.1

Om 'n suksesvolle statistiese stelsel in die RSA te bedryf, is die samewerking tussen die Sentrale Statistiekdiens en die inwoners van die RSA, die private sektor en die owerheidsinstellings onontbeerlik. Sonder hierdie volgehoue samewerking en welwillendheid sal die tydige beskikbaarstelling van relevante en betroubare amptelike statistieke nie moontlik wees nie.

Co-operation between the Central Statistical Service and the residents of the RSA, the private sector and the government institutions is essential for a successful statistical system in the RSA. Without this continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

NOTA:

Hierdie statistiese vrystelling van die BBP ramings teen konstante 1990-pryse was oorspronklik geskeduleer vir Maandag 23 Mei 1994 om 11:00, maar moes ongelukkig uitgestel word tot vandag, Vrydag 27 Mei 1994 om 11:00.

Die uitstel was genoodsaak weens die omvattende aard van die hersienings en die gepaardgaande herbasering *(dit wil sê, die verandering van* die relatiewe pryse en gewigte in die basisjaar) wat ongeveer elke vyf jaar plaasvind. Die basisjaar is nou van 1985 na 1990 verander. Die finalisering, balansering en versoening *van die nasionale rekeninge* en in besonder dié van die produksierekening (wat die verantwoordelikheid van die SSD is) en die bestedings-, kapitaalfinansiering- en die persoonlike rekeninge (wat die verantwoordelikheid van die Suid-Afrikaanse Reserwebank is) moes dus eers afgehandel word alvorens hierdie statistiese vrystelling gepubliseer kon word.

REëLE NIE-LANDBOUSEKTOR GROEI POSITIEF IN EERSTE KWARTAAL VAN 1994

NOTA:

Alle groeikoerse in hierdie statistiese vrystelling is kwartaallikse persentuele veranderings wat uitgedruk word teen jaarkoerse.

Die herbasering van die BBP-ramings teen konstante 1985-pryse na konstante 1990-pryse is nou voltooi en die resultate word vir die eerste keer in hierdie Statistiese Vrystelling gepubliseer.

Jaarsyfers word getoon vir die jare 1986 tot 1993 en kwartaalsyfers vanaf die eerste kwartaal van 1986 tot en met die eerste kwartaal van 1994. Verdere toeligting ten opsigte van die herbasering word onder die **VERDUIDELIKINGS** gegee.

In teenstelling met positiewe groeikoerse in al vier kwartale van 1993, het die seisoensaangesuiwerde totale reële BBP teen markpryse met 3,7% in die eerste kwartaal van 1994 afgeneem, vergeleke met die vierde kwartaal van 1993. Die daling in die eerste kwartaal van 1994 is hoofsaaklik die gevolg van 'n afname in die reële seisoensaangesuiwerde toegevoegde waarde van die landbousektor. Afnames in die toegevoegde waarde het veral voorgekom by veeteelt-, tuinbou- en ook by sekere akkerbouprodukte soos hawer, tabak, gars en sigorei. Hierdie daling moet egter ook gesien word teen die agtergrond van die besonder hoë vlakke van die landboubydrae tot die BBP in die tweede helfte van 1993.

NOTE:

This statistical news release of the GDP estimates at constant 1990 prices was originally scheduled for Monday 23 May 1994 at 11:00 but *unfortunately had to be postponed until today,* Friday 27 May 1994 at 11:00.

This postponement was necessitated by the extensive nature of the revisions and the concomitant rebasing (i.e. the change of the relative prices and weights in the base year), which takes place approximately every five years. The base year has now been changed from 1985 to 1990. The finalisation, balancing and reconciliation of the national accounts and in particular those of the production account (which is the responsibility of the CSS) and of the expenditure, capital finance and personal accounts (which are the responsibility of the South African Reserve Bank) had to be completed before this statistical release could be published.

REAL NON-AGRICULTURAL SECTOR GROWTH POSITIVE IN FIRST QUARTER OF 1994

NOTE:

All growth rates in this statistical release are quarterly percentage changes which are indicated at annual rates.

The rebasing of the GDP estimates at constant 1985 prices to constant 1990 prices have been completed and the results are now published in this statistical release for the first time.

Annual figures are shown for the years 1986 to 1993 and quarterly figures from the first quarter of 1986 up to and including the first quarter of 1994. Further explanations in respect of the rebasing are given under the **EXPLANATIONS**.

As against positive growth rates in all four quarters of 1993, the total seasonally adjusted real GDP at market prices dropped by 3,7% in the first quarter of 1994 compared with the fourth quarter of 1993. The decrease in the first quarter of 1994 is mainly the result of a decline in the real seasonally adjusted value added of the agricultural sector. Decreases in the value added were mainly recorded in livestock, horticulture and also certain field crop products such as oats, tobacco, barley and chicory. This decrease must, however, be seen against the background of the exceptionally high levels of the agricultural contribution to the GDP in the second half of 1993.

BLOEMFONTEIN	(051) 477767	KEMPTON PARK	(011) 3943420/1	NELSPRUIT	(01311) 52455/6
DURBAN	(031) 3053904	KIMBERLEY	(0531) 33965	PIETERSBURG	(01521) 71609
KAAPSTAD/CAPE TOWN	(021) 4612098	KLERKSDORP	(018) 4624008	PORT ELIZABETH	(041) 523801/2

Wat die verloop van die nie-landbousektor betref is dit betekenisvol dat die patroon van positiewe groeikoerse wat in die eerste kwartaal van 1993 begin het tot in die eerste kwartaal van 1994 voortgesit is, weliswaar teen 'n laer koers as in die laaste twee kwartale van 1993. Dit beteken egter dat die hoër vlak wat die reële nie-landbouproduksie aan die einde van 1993 bereik het in die eerste kwartaal van 1994 gehandhaaf is. Hierdie vlak lê 1,1% hoër vir die eerste kwartaal van 1994 as vir die eerste kwartaal van 1993.

Regarding the trend of the non-agricultural sector it is significant that the pattern of positive growth rates which commenced in the first quarter of 1993 continued up to the first quarter of 1994; albeit at a lower rate than in the last two quarters of 1993. However, this implies that the higher level which the real non-agricultural production reached at the end of 1993 was maintained in the first quarter of 1994. This level is 1,1% higher for the first quarter of 1994 than for the first quarter of 1993.

Die kwartaallikse veranderings in die BBP teen konstante 1990-pryse teen seisoensaangesuiwerde jaarkoerse is soos volg:

The quarterly changes in the GDP at constant 1990 prices at seasonally adjusted annualised rates are as follows:

	1992	1993				1994	
	4	1	2	3	4	1	
	%	%	%	%	%	%	
BBP teen konstante 1990-pryse							GDP at constant 1990 prices
Teen markpryse	-3,6	2,5	4,8	7,0	4,9	-3,7	At market prices
Teen faktorinkome:							At factor incomes:
Totaal	-3,7	3,6	5,0	7,3	4,9	-4,2	Total

VERDUIDELIKINGS

Informele sektor

Die informele sektor se bydrae (in terme van toegevoegde waarde) tot die bruto binnelandse produk word nou vir die eerste keer in totaal by die hersiene ramings van die BBP ingesluit. Tot dusver was slegs 'n deel van die informele sektor, by wyse van toerekenings, by die BBP-ramings in berekening gebring. So, byvoorbeeld, is 'n toerekening gemaak vir eie onderhoudsproduksie by die landbou, terwyl by vervoer 'n toerekening ten opsigte van vervoerdienste wat deur private minibusse gelewer word, gemaak word.

In die lig daarvan dat 'n deel van die informele aktiwiteite dus reeds by wyse van toerekenings by die BBP-ramings ingesluit is, volg dit dat die bestaande ramings slegs met die toegevoegde waarde van die oorblywende deel van die informele sektor verhoog moes word. Hierdie bykomende deel van die informele sektor se toegevoegde waarde het die hersiene nominale (heersende pryse) BBP-ramings teen markpryse in 1993 met ongeveer 5,6% verhoog. (Die vlak van die BBP teen heersende pryse kan egter ook

EXPLANATIONS

Informal sector

The informal sector's contribution (in terms of value added) to the gross domestic product is now taken into account in total for the first time in the revised estimates of the GDP. Up to now only a portion of the informal sector's value added, by means of imputations, was accounted for in the GDP estimates. Thus, for example, an imputation is made in respect of agriculture for own subsistence production, while, in respect of transport an imputation is made for transport services rendered by minibuses.

In view of the fact that a portion of the informal activities were thus already included in the GDP by means of imputations, it follows that the existing estimates had to be increased by the remaining part of the informal sector only. This additional portion of the informal sector's value added increased the revised nominal (current prices) GDP estimates at market prices in 1993 by approximately 5,6%. (The level of the GDP at current prices could, however, also be influenced by the other revisions based on re-

beïnvloed word deur die ander hersienings op grond van relatief meer opgedateerde databronne.) Die hersiene BBP-ramings teen heersende pryse word tans geëvalueer en sal binnekort gepubliseer word.

Op grond van interpolasie is die toegevoegde waarde wat in 1993 ten opsigte van die informele sektor by die BBP bygetel is, terugwaarts geraam vir 'n aantal jare, met die gevolg dat die nuwe basisjaar, 1990, dus 'n raming vir die totale informele sektor insluit.

Die basiese gegewens vir die raming van die informele sektor se bydrae (in terme van toegevoegde waarde) tot die BBP is verkry uit die SSD se 1993 Oktober-huishoudingsopname wat voortaan 'n jaarlikse opname sal wees.

Omvattende hersiening

Afgesien van die gereelde hersiening van die ramings vir die jongste kwartale, word die ramings vir alle komponente van die nasionale rekeninge elke vyfde jaar, in samehang met die herbasering van die ramings teen konstante pryse, ondersoek en hersien. So 'n omvattende hersiening van die verskillende komponente van die nasionale rekeninge is nou deur die SSD en die Suid-Afrikaanse Reserwebank voltooi. Veral van belang by hierdie hersiening is die resultate van sensusse wat sedert die vorige herbasering beskikbaar gekom en ingewerk is. Die hersiene ramings van die BBP inkorporeer derhalwe die resultate van verskeie sensusse, soos die 1990-sensus van Mynwese, die 1988-landbousensus en die 1988-, 1990-, 1991- en 1992-landbou-opnames (steekproefopnames van die SSD), die 1988-sensus van Fabriekswese, die 1991-bevolkingsensus en verskeie kleiner opnames.

Herbasering

In ooreenstemming met die internasionale gebruik om ongeveer elke vyf jaar die relatiewe verandering in pryse by ramings teen konstante pryse in berekening te bring, is daar van 1985 na 1990 as basisjaar vir die ramings teen konstante pryse oorgeskakel. Die ramings vir 1988 en daaropvolgende jare is in detail herbereken op grond van die pryse en gewigte (beswaringsfaktore) van 1990. Die ramings teen konstante pryse vir die jare tot en met 1987 is nie volgens die 1990-gewigte herweeg nie, maar is bloot met die hersiene reeks vanaf 1988 geskakel. Sodoende word verseker dat die bestaande reële groeikoerse ten opsigte van die individuele nywerheidshoofafdelings (sektore) voor 1988 behoue bly. Net soos in die geval van die individuele nywerheidshoofafdelings (sektore) is die totale BBP teen konstante pryse tot en

lative more updated data sources.) The revised GDP estimates at current prices are at present being evaluated and will be published shortly.

By means of interpolation the value added in respect of the informal sector, which was added to the GDP in 1993, was estimated backwards for several years, with the result that the new base year, 1990, thus includes an estimate for the total informal sector.

The basic data for the estimation of the informal sector's contribution (in terms of value added) to the GDP were obtained from the CSS's October Household Survey of 1993 which will henceforth be an annual survey.

Major revision

Apart from the usual revision of the estimates for the latest quarters, the estimates for all components of the national accounts are investigated and revised every five years in conjunction with the rebasing of the estimates at constant prices. Such a major revision of the various components of the national accounts has now been completed by the CSS and the South African Reserve Bank. Of particular importance in this revision are the results of the various censuses of the CSS, that became available and have been incorporated since the previous rebasing. The revised estimates of the GDP thus incorporate the results of several censuses, such as the 1990 Census of Mining, the 1988 Census of Agriculture and the 1988, 1990, 1991 and 1992 Agricultural Surveys (sample surveys of the CSS), the 1988 Census of Manufacturing, the 1991 Population Census and several other smaller surveys.

Rebasing

In accordance with international practice of taking into account the relative change in prices in the estimates of constant prices approximately every five years, the base year for estimates at constant prices was changed from 1985 to 1990. The estimates for 1988 and subsequent years were recalculated in detail on the basis of the prices and weights (weighting factors) of 1990. The estimates at constant prices for the years up to and including 1987 have not been reweighted in accordance with the 1990 weights, but have simply been linked with the revised series from 1988. This has ensured that the existing real growth rates in respect of the individual major divisions (sectors) prior to 1988 are retained. As in the case of the individual industrial major divisions (sectors), the total GDP at constant prices up to and including 1987

met 1987 ook afsonderlik met die totaal van die hersiene reeks teen 1990-pryse vanaf 1988 aaneengeskakel (sonder herweging). Dit bring mee dat die herbasering nie die groeikoerse van die totale BBP vir die jare voor 1988 beïnvloed nie.

'n Resultaat van hierdie prosedure is dat die individuele omgeskakelde nywerheidshoofafdelings (sektore van die totale BBP) vir die jare voor 1988 nie meer noodwendig na die groottotaal van die BBP optel nie. Die voordeel is egter dat die historiese groeikoerse tot 1987, per sektor en vir die totaal, nie deur 'n herbasering verander word nie.

Gedurende 1985 en 1990 het die samestelling van die totale BBP in 'n mate verander, gedeeltelik as gevolg van die byvoeging van 'n raming vir die totale informele sektor in 1990. Ten spyte van die relatiewe verandering in die gewigte van die onderskeie nywerheidshoofafdelings (sektore) se bydrae tot die totale BBP verskil die groeikoerse wat teen 1990-pryse bereken is nie noemenswaardig van dié wat teen 1985-pryse bereken is nie.

Die onderstaande tabel toon die waardes (gewigte) per R100 BBP van die verskillende nywerheidshoofafdelings (sektore) in die twee basisjare.

was also linked separately (without reweighting) with the total of the revised series at 1990 prices from 1988. The result is that the rebasing does not affect the growth rates for the years prior to 1988.

A result of this procedure is that the individually rebased industrial major divisions (sectors of the total GDP) for the years prior to 1988 no longer necessarily add up to the sum total. The advantage however is that historical growth rates up to 1987, per sector and for the total, are not changed by rebasing.

During 1985 and 1990 the composition of the total GDP has changed to some extent, partially as a result of the addition of an estimate for the total informal sector in 1990. Despite the relative changes in the weights of the various industrial major divisions (sectors) the difference in the growth rates which were calculated at 1990 prices and those calculated at 1985 prices are negligible.

The following table shows the values (weights) per R100 GDP of the various industrial major divisions (sectors) in the two base years.

	1985	1990	
Landbou, bosbou en visserye	5,80	5,28	Agriculture, forestry and fishing
Mynwese en steengroewe	14,83	9,72	Mining and quarrying
Goudmynbou	(10,43)	(5,08)	Gold mining
Fabriekswese	23,06	25,50	Manufacturing
Elektrisiteit, gas en water	4,30	4,37	Electricity, gas and water
Konstruksie (kontrakteurs)	3,68	3,48	Construction (contractors)
Handel, verversings- en akkommodasiedienste	11,79	15,04	Trade, catering and accommodation services
Vervoer, opberging en kommunikasie	8,83	7,43	Transport, storage and communication
Finansiering, versekering, vaste eiendom en besigheidsdienste	14,01	14,49	Finance, insurance, real estate and business services
Gemeenskaps-, maatskaplike en persoonlike dienste	1,69	1,82	Community, social and personal services
Min toegerekende finansiële dienste	2,84	3,14	Less imputed financial services
Algemene owerheid	12,36	13,83	General government
Ander produsente	2,49	2,18	Other producers
Totaal	100,00	100,00	Total

Die veranderinge wat in die ekonomiese produksiestruktuur plaasgevind het van 1985 na 1990, is voor die hand liggend.

Dit is tog opmerklik dat die belangrikheid van handel, verversings- en akkommodasiedienste en in 'n mindere mate dié van fabriekswese, toegeneem het, ten koste van die rol van mynwese en steengroewe (wat feitlik uitsluitlik toeskryfbaar is aan die minder belangrike rol wat goudmynbou in hierdie verband speel). Hierdie betekenisvolle verandering in die ekonomiese bydrae van die onderskeie sektore weërspieël in 'n groot mate die uitwerking van die inagneming van die informele sektor.

It is obvious which changes occurred in the economic production structure from 1985 to 1990.

It is significant that the importance of trade, catering and accommodation services and to a lesser extent of manufacturing, increased at the expense of mining and quarrying (which is mainly attributable to the less important role that gold mining plays in this respect). This significant change in the economic contribution of the various sectors reflects to a great extent the effect of the incorporation of the informal sector.
