DIE BIBLIOTEK / THE LIBRARY  
SENTRALE STATISTIEKDIENS  
CENTRAL STATISTICAL SERVICE  
PRIVAATSAK / PRIVATE BAG X44  
0001 PRETORIA

Co-operation between the Central Statistical Service and the residents of the RSA, the private sector and the government institutions is essential for a successful statistical system in the RSA. Without this continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

The CSS publishes approximately five hundred different releases per year. In the light of expenditure restraints in government, it is no longer economically viable to produce them in more than one of the eleven official languages in South Africa. Since the releases are also extensively used by the international economic and social-scientific communities, from 1996 CSS releases will be published in English.

**REAL GDP AT MARKET PRICES INCREASES BY 2,2% YEAR-ON-YEAR**

Notwithstanding fluctuations in the quarterly growth rates for the first two quarters of 1997, the total real GDP was 2,2 % higher in the first half of 1997 as compared with the corresponding period in 1996.

According to the latest preliminary indicators the total seasonally adjusted real GDP at market prices increased by an annualised rate of 2,6% in the second quarter of 1997, compared with the first, after it had declined by an annualised rate of 0,9% in the first quarter of 1997, compared to the fourth quarter of 1996.

As far as the non-agricultural sector is concerned the total seasonally adjusted real GDP increased by 3,2% in the second quarter of 1997, following an increase of 1,7% in the first quarter. This higher growth rate in the second quarter is mainly attributable to higher increases in the seasonally adjusted real production of mining with an annualised growth rate of 1,5% against a decline of 0,4% in the first quarter; manufacturing (7,0% growth against 5,6% in the first quarter); trade and catering (1,5% increase against a decline of 1,8% in the first quarter) and transport (4,4% increase against 0,6% in the first quarter). With the exception of the agricultural and government sectors all the other sectors recorded positive growth rates in the second quarter of 1997.

**Note**

Table 2.5 replaces a part of the table that was always given on this page and which contained growth rates for the non-agricultural sector and for the secondary and tertiary industries separately. Growth rates at market prices and at factor incomes are shown in table 1.

## EXPLANATIONS AND DEFINITIONS

### Scope

The estimates cover the Republic of South Africa including the former TBVC States.

### Gross domestic product at factor incomes

The gross domestic product at factor incomes is equal to the remuneration received by the production factors i.e. the wages, interest and depreciation, rent and profit earned by labour, capital, land and entrepreneurship respectively for their participation in the domestic production. The production of the various industries are valued at factor incomes only.

### Gross domestic product at market prices

The gross domestic product at market prices is equal to the gross domestic product at factor incomes plus total indirect taxes paid (such as VAT, excise duty, import duty, etc.) minus total subsidies received (e.g. payments from government to businesses).

### Remuneration of employees

Gross salaries and wages; remuneration in kind (food, housing, etc.); employers' contributions to staff funds and to social security funds, and remuneration to managing and working directors.

### Gross operating surplus (Other income)

Operating surplus of businesses before deduction of net interest paid, depreciation allowances and income tax.

### General government

All producers of general government services. These comprise public administration and defence, as well as education, medical services, etc. In many cases no direct payments are made for these services by users.

### Other producers

Non-profit institutions serving households (universities, trade unions, etc.) as well as domestic workers (staff in the service of households).

### Revision of estimates

Apart from the usual revision of the estimates for the latest quarters, the estimates for all components of the national accounts are usually investigated and revised every five years in conjunction with the rebasing of the estimates at constant prices. At such a time the results of censuses that have become available in the meantime are incorporated in the estimates.

### Timing of publication

Since the beginning of 1996 the CSS publishes its GDP estimates for a given quarter after sixty days, and not, as before, within forty-five days. This allows the CSS to incorporate information from the first two months of the given quarter, and also to issue current price estimates at the same time.

### Primary industries

The primary industries include the sectors agriculture and mining.

### Secondary industries

The secondary industries include the sectors manufacturing, electricity, gas and water and construction.

### Tertiary industries

The tertiary industries include the sectors trade and catering, transport and communication, finance and real estate, community services, general government, other producers and imputed financial services (imputations).

Gross Domestic Product at factor incomes at constant 1990 prices. Seasonally adjusted. Quarterly % change at annual rates.
