KEY FINDINGS FOR THE THIRD QUARTER OF 2012

Real gross domestic product at market prices increased by 1,2 per cent quarter-on-quarter, seasonally adjusted and annualised

The largest contributions to the quarter-on-quarter growth of 1,2 per cent were as follows:

- Finance, real estate and business services and general government services each contributed 0,4 of a percentage point based on growth of 1,8 per cent and 2,7 per cent respectively;
- The agriculture, forestry and fishing industry, the manufacturing industry and the wholesale, retail, motor trade and catering and accommodation industry each contributed 0,2 of a percentage point based on growth of 7,4 per cent, 1,2 per cent and 1,7 per cent respectively; and
- The transport, storage and communication industry and personal services each contributed 0,1 of a percentage point based on growth of 1,1 per cent and 2,1 per cent respectively.

Key economic developments

The following points should be noted when analysing the recent performance of the economy:

- The slower growth in finance, real estate and business services was due to slower increases from activities in the equity, bond and other financial markets and the banking sector;
- The growth in the wholesale, retail and motor trade; catering and accommodation industry was due to increases reflected in the turnover in the retail trade and catering and accommodation divisions in the trade industry;
- The growth in the agriculture, forestry and fishing industry was due to high production in horticulture and animal products;
- Manufacturing growth was led by strong growth in the wood and wood products, paper, publishing and printing, the basic iron and steel, non- ferrous metal products, metal products and machinery and the petroleum, chemical products, rubber and plastic products; and
- Economic activity in the mining and quarrying industry reflected negative growth of 12,7 per cent, due to lower production in all mining divisions.

The unadjusted real GDP at market prices increased by 2,3 per cent year-on-year

The most notable performances of industries in the third quarter of 2012 compared with the third quarter of 2011 were as follows:

- The wholesale, retail and motor trade; catering and accommodation industry increased by 3,2 per cent;
- Personal services and construction industry increased by 3,1 per cent each;
- General government services increased by 2,9 per cent;
- The manufacturing industry increased by 2,5 per cent;
- Finance, real estate, and business services increased by 2,3 per cent;
- The agriculture, forestry and fishing industry decreased by 2,5 per cent; and
- The mining and quarrying industry decreased by 1,2 per cent.

The unadjusted real GDP at market prices for the first nine months of 2012 increased by 2,6 per cent compared with the first nine months of 2011.

Figure 1 – Growth in gross domestic product year-on-year (Y/Y) and quarter-on-quarter seasonally adjusted and annualised (Q/Q)

Figure 2 – Value added growth rates in various sectors (seasonally adjusted and annualised)

The tertiary sector of the economy has grown consistently except for the first and second quarters of 2009, during which it contracted. In contrast, the primary and secondary sectors' volatile growth patterns are persisting.

Revised estimates of gross domestic product:

Recent estimates of GDP were revised due to availability of new sources of information. The information relating to 2012 is shown in Table A.

Table A – GDP revisions: 2012

| Industry | Unadjusted (Y/Y) | | | Seasonally adjusted and annualised (Q/Q) | | |

Nominal GDP estimated at R804 billion for the third quarter of 2012

The nominal value added during the third quarter of 2012 was R804 billion, which is R23 billion more than in the second quarter of 2012. The most notable performances were as follows:

- The general government services expanded by R7 billion to R120 billion;
- The manufacturing industry expanded by R5 billion to R89 billion;
- The mining and quarrying industry expanded by R4 billion to R70 billion; and
- The agriculture, forestry and fishing industry decreased by R13 billion to R18 billion

Structure of the economy

The largest industries, as measured by their nominal value added in the 3rd quarter of 2012, were as follows:

- Finance, real estate and business services – 21,1 per cent;
- General government services – 16,7 per cent;
- Wholesale, retail and motor trade; catering and accommodation – 15,3 per cent; and
- Manufacturing – 12,4 per cent.

PJ Lehohla
Statistician-General

KEY FINDINGS FOR THE ANNUAL ESTIMATES 2006 TO 2011

Revised level of GDP

The level of nominal GDP has been revised by between -1,6 per cent and 0,3 per cent for the period 2008 to 2011 as illustrated in Table B. The level of GDP at current prices for the period 2006 to 2007 stayed unchanged as revisions took place from the year 2008 onwards. The estimate of the level of GDP at current prices for the year 2011 is -1,6 per cent lower compared with the previous published estimate.

Table B – Gross domestic product at current prices according to the previous and revised estimates

| | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|-----------------------------|-------|-------|-------|-------|-------|-------|
| Previous GDP (Rand billion) | 1 767 | 2 016 | 2 263 | 2 398 | 2 661 | 2 964 |
| Revised GDP (Rand billion) | 1 767 | 2 016 | 2 256 | 2 406 | 2 659 | 2 917 |
| Difference (Rand billion) | 0 | 0 | -7 | 8 | -2 | -47 |
| Difference (percentage) | 0 | 0 | -0,3 | 0,3 | -0,1 | -1,6 |

Revised growth in real GDP

The revised estimates of the level of GDP necessitate a revision of the annual rates of growth of GDP as well. The growth rates for 2006 to 2009 remained unchanged. The growth rate for 2010 was revised from 2,9 per cent to 3,1 and 2011 was revised from 3,1 per cent to 3,5 per cent . The annual growth rates in real GDP between 2006 and 2011 are indicated in Table C.

Table C - Annual growth in the gross domestic product at constant prices according to the previous and revised estimates

| | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|--|------|------|------|------|------|------|
| Previous annual percentage growth in GDP (2005 prices) | 5,6 | 5,5 | 3,6 | -1,5 | 2,9 | 3,1 |
| Revised annual percentage growth in GDP (2005 prices) | 5,6 | 5,5 | 3,6 | -1,5 | 3,1 | 3,5 |

Annual real value added by industry

Table D shows the contribution of the different industries, and taxes less subsidies on products, to the annual percentage change in real GDP for the four years 2008 to 2011.

The contributors to the increase in economic activity in 2011 were finance, real estate and business services (0,8 of a percentage point), the manufacturing and the wholesale, retail and motor trade; catering and accommodation industry (each contributing 0,6 of a percentage point), general government services (0,5 of a percentage point) and the transport, storage and communication industry (0,3 of a percentage point). The contributions by other industries were all insignificant, i.e. the agriculture, forestry and fishing industry, the mining and quarrying industry, the electricity, gas and water industry, the construction industry. Personal services contributed (0,1 of a percentage point).

Table D – Contribution of the percentage change in real value added by industry to the total real annual economic growth rate (real GDP at market prices)

| Industry | Relative size 2011 (per cent) ¹ | Real annual percentage change for the year 2008 (compared with 2007), 2009 (compared with 2008), 2010 (compared with 2009) and 2011 (compared with 2010) | | | | Contributions to the total real annual economic growth rate (percentage points) ² | | | |
|---|--|--|-------------|------------|------------|--|-------------|------------|------------|
| | | 2008 | 2009 | 2010 | 2011 | 2008 | 2009 | 2010 | 2011 |
| Agriculture, forestry and fishing | 2,3 | 16,1 | -1,6 | 0,4 | -0,1 | 0,3 | 0,0 | 0,0 | 0,0 |
| Mining and quarrying | 5,4 | -5,6 | -5,4 | 5,7 | 0,3 | -0,3 | -0,3 | 0,3 | 0,0 |
| Manufacturing | 15,3 | 2,6 | -10,1 | 5,5 | 3,6 | 0,4 | -1,7 | 0,8 | 0,6 |
| Electricity, gas and water | 1,9 | -3,1 | -1,4 | 2,1 | 1,1 | -0,1 | 0,0 | 0,0 | 0,0 |
| Construction | 3,1 | 8,5 | 7,8 | 0,7 | 0,5 | 0,2 | 0,2 | 0,0 | 0,0 |
| Wholesale, retail and motor trade; catering and accommodation | 12,2 | 1,0 | -1,2 | 3,8 | 4,5 | 0,1 | -0,1 | 0,5 | 0,6 |
| Transport, storage and communication | 9,1 | 4,0 | 0,9 | 2,0 | 3,1 | 0,4 | 0,1 | 0,2 | 0,3 |
| Finance, real estate and business services | 21,0 | 7,4 | 1,0 | 2,2 | 4,0 | 1,5 | 0,2 | 0,5 | 0,8 |
| General government services | 13,5 | 4,5 | 3,9 | 2,9 | 3,9 | 0,6 | 0,5 | 0,4 | 0,5 |
| Personal services | 5,5 | 3,9 | -0,9 | 0,4 | 2,5 | 0,2 | 0,0 | 0,0 | 0,1 |
| <i>Total value added</i> | <i>89,4</i> | <i>3,8</i> | <i>-1,3</i> | <i>3,0</i> | <i>3,3</i> | <i>3,3</i> | <i>-1,2</i> | <i>2,7</i> | <i>3,0</i> |
| Taxes less subsidies on products | 10,6 | 2,5 | -3,1 | 3,5 | 4,9 | 0,3 | -0,3 | 0,4 | 0,5 |
| GDP at market prices | 100,0 | 3,6 | -1,5 | 3,1 | 3,5 | 3,6 | -1,5 | 3,1 | 3,5 |

1/The relative size of each industry for the year of 2011 is the share of its real value added of the GDP for the year 2010. Similarly, the relative size of taxes less subsidies on products is the share of its value of the real GDP for the year 2010.

2/ The contribution is calculated by multiplying the percentage change of each industry (and taxes less subsidies on products) by its share of GDP in the previous year (i.e. its relative size).

GDP deflator

The GDP deflator is defined as the ratio of the nominal estimates of GDP to the real estimates of GDP. It is an indication of the change in prices in the economy from the perspective of national accounts. The GDP deflator can be compared with two other popular price indices, i.e. the consumer price index (CPI) and the producer price index (PPI). Table E compares these three indices from 2006 to 2011, with 2005 as the common reference year (index = 100).

Table E – GDP deflator 2006 - 2011

| Index | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|--------------|-------|-------|-------|-------|-------|-------|
| CPI | 103,2 | 109,5 | 120,3 | 128,9 | 134,4 | 140,9 |
| PPI | 107,7 | 119,5 | 136,6 | 136,6 | 144,8 | 156,9 |
| GDP deflator | 106,3 | 115,1 | 124,4 | 134,7 | 144,4 | 153,1 |

Similarly, the deflators can be calculated for the various industries to provide an indication of the underlying details of the GDP deflator. This is illustrated in Table F.

Table F – GDP deflator by industry 2006 - 2011

| Industry | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|---|-------|-------|-------|-------|-------|-------|
| Agriculture, forestry, fishing | 128,3 | 148,3 | 143,7 | 153,6 | 148,9 | 155,3 |
| Mining and quarrying | 125,6 | 149,0 | 197,7 | 208,9 | 223,1 | 257,5 |
| Manufacturing | 99,5 | 104,9 | 114,3 | 123,9 | 121,0 | 114,7 |
| Electricity, gas and water | 108,2 | 118,4 | 134,2 | 179,2 | 183,2 | 209,3 |
| Construction | 108,4 | 116,2 | 135,9 | 151,1 | 159,3 | 173,2 |
| Wholesale, retail and motor trade; catering and accommodation | 104,4 | 109,8 | 123,5 | 137,5 | 160,1 | 171,4 |
| Transport, storage and communication | 104,9 | 105,2 | 116,8 | 121,5 | 133,2 | 141,1 |
| Finance and business services | 104,7 | 116,0 | 116,9 | 122,7 | 131,7 | 138,6 |
| Personal services | 105,3 | 111,4 | 116,3 | 132,5 | 139,1 | 148,7 |
| Government | 107,1 | 116,4 | 125,7 | 141,3 | 157,1 | 166,3 |

The GDP deflator linked to the Agriculture, forestry and fishing industry has been the most volatile.

Formal and non-observed economy

The production boundary (the range of goods and services included in the estimates of value added) can be divided according to the formal and the non-observed economy. This is illustrated in Table G.

Table G – Relative size (percentage) of formal and non-observed economy: 2006 - 2011

| Industry | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|--------------------|-------|-------|-------|-------|-------|-------|
| Formal | 88,0 | 88,1 | 88,5 | 88,0 | 88,2 | 88,3 |
| Informal | 5,7 | 5,5 | 5,4 | 5,8 | 5,8 | 6,0 |
| Own final use | 6,1 | 6,3 | 5,9 | 6,1 | 5,8 | 5,6 |
| Other non-observed | 0,2 | 0,1 | 0,2 | 0,2 | 0,2 | 0,2 |
| Total | 100,0 | 100,0 | 100,0 | 100,0 | 100,0 | 100,0 |

The estimates of the different components of the economy shown in Table G are stable over time. The informal sector was estimated at 6,0 per cent in 2011, with the proportion of production for own final use estimated at 5,6 per cent. The rest of the non-observed economy contributed 0,2 per cent in all years except in 2007, when its contribution was slightly lower.

REGIONAL ESTIMATES

Preliminary estimates indicate that the highest real annual economic growth rates per region - as measured by the gross domestic product per region (GDP) at market prices - for 2011 compared with 2010 were recorded in Gauteng at 4,0 per cent, followed by Western Cape and KwaZulu-Natal at 3,6 per cent each respectively.

The economic performance of Gauteng is attributed to growth in the wholesale, retail and motor trade; catering and accommodation industry (4,7 per cent), general government services (4,4 per cent), the finance, real estate and business services (4,3 per cent) and the manufacturing industry (4,1 per cent). The economic performance of Western Cape is attributed to the growth in the wholesale, retail and motor trade; catering and accommodation industry (4,6 per cent), general government services (4,5 per cent), finance, real estate and business services (3,9 per cent) and the manufacturing industry (3,5 per cent). Northern Cape and Limpopo recorded the lowest growth rates (of 2,2 per cent each) of the nine provinces in 2011. In comparison, the real annual economic growth rate for South Africa increased by 3,5 per cent in 2011 (see Table 16 and Figure 3).

Figure 3 – Real annual economic growth rate per region: 2011

A comparison of the average real economic growth rate from 2001 to 2011 recorded by the provincial economies and the total economy is shown in Figure 4. The South African economy recorded an average growth rate of 4,0 per cent. Gauteng and the Western Cape were above the national average with rates of 4,6 and 4,1 per cent respectively. KwaZulu-Natal recorded the same average rate as that of the national economy (4,0 per cent). All other provincial economies recorded lower growth rates, e.g. Northern Cape posted an average economic growth rate of 2,4 per cent over the period.

The relative ranking of the contribution of the nine provinces to the South African economy did not change between 1996 and 2011, as shown in Figure 5. Gauteng remains the largest (34,5 per cent), followed by KwaZulu-Natal (15,7 per cent) and Western Cape (14,2 per cent). These three dominant provinces (collectively contributing nearly two-thirds to the South African economy) have, however, shown a decline in their contribution over the period. Positive growth in terms of relative size was recorded by Mpumalanga and Limpopo, the latter increasing from 6,8 per cent to 7,1 per cent.

Figure 4 – Average real annual economic growth rate per region: 2001 – 2011**Figure 5 – Provincial contribution to South African economy: 1996, 2006 and 2011**

Table H describes the regional distribution of economic activity across the nine provinces. Given the dominance of Gauteng in the economy, all industry groups are found to be concentrated there, except for the agriculture, forestry and fishing industry and the mining and quarrying industry. The bulk of the value added by the agriculture, forestry and fishing industry in South Africa stems from KwaZulu-Natal (26,8 per cent) and the Western Cape (22,6 per cent). The mining industry is predominantly in North West (24,8 per cent); Limpopo (23,7 per cent) and Mpumalanga (20,0 per cent).

Table H – Regional distribution of economic activity: 2011

| Industry | Western Cape | Eastern Cape | Northern Cape | Free State | KwaZulu-Natal | North West | Gauteng | Mpumalanga | Limpopo | SA |
|---|--------------|--------------|---------------|------------|---------------|------------|---------|------------|---------|-----|
| Agriculture, forestry and fishing | 22,6 | 5,0 | 6,1 | 10,3 | 26,8 | 6,2 | 6,0 | 9,0 | 8,1 | 100 |
| Mining and quarrying | 0,4 | 0,2 | 6,8 | 7,9 | 3,4 | 24,8 | 12,8 | 20,0 | 23,7 | 100 |
| Manufacturing | 14,6 | 8,0 | 0,4 | 3,9 | 21,6 | 2,5 | 40,5 | 7,1 | 1,5 | 100 |
| Electricity, gas and water | 11,2 | 4,1 | 2,7 | 6,4 | 15,9 | 3,6 | 33,0 | 15,1 | 8,1 | 100 |
| Construction | 17,9 | 4,7 | 1,1 | 3,1 | 13,6 | 4,8 | 43,3 | 6,8 | 5,1 | 100 |
| Wholesale, retail and motor trade; catering and accommodation | 17,4 | 8,0 | 1,6 | 4,7 | 17,6 | 4,4 | 35,5 | 5,2 | 5,5 | 100 |
| Transport, storage and communication | 15,4 | 7,1 | 2,1 | 4,5 | 22,4 | 4,8 | 34,2 | 4,9 | 4,6 | 100 |
| Finance, real estate and business services | 19,7 | 7,3 | 1,4 | 3,9 | 13,6 | 3,8 | 41,1 | 4,0 | 5,2 | 100 |
| Personal services | 13,7 | 12,9 | 3,4 | 10,1 | 17,3 | 8,5 | 23,5 | 5,7 | 5,0 | 100 |
| General government services | 9,8 | 11,2 | 1,9 | 5,2 | 14,2 | 5,3 | 39,7 | 5,0 | 7,7 | 100 |

An alternative presentation is provided in Table I which shows the relative size of different industries in each provincial economy. It shows that manufacturing accounts for 13,5 per cent of the Gauteng economy, even though 40,5 per cent of South African manufacturing industry is in the province. The dominant industry in Gauteng's economy is finance, real estate and business services, which contributes 22,8 per cent to the regional gross domestic product. The mining and quarrying industry is the biggest contributor in the economies of four provinces, namely North West, Northern Cape, Limpopo and Mpumalanga.

Table I – Relative size of formal and non-observed economy by industry: 2011

| Industry | Western Cape | Eastern Cape | Northern Cape | Free State | KwaZulu-Natal | North West | Gauteng | Mpuma-langa | Limpopo |
|---|--------------|--------------|---------------|--------------|---------------|--------------|--------------|--------------|--------------|
| Agriculture, forestry and fishing | 3,5 | 1,5 | 6,0 | 4,3 | 3,8 | 2,1 | 0,4 | 2,8 | 2,5 |
| Mining and quarrying | 0,3 | 0,2 | 26,7 | 13,3 | 1,9 | 33,6 | 3,3 | 24,9 | 29,4 |

NOTES

| Forthcoming issues | Issue | Expected date of publications |
|--------------------|------------------------|-------------------------------|
| | Fourth quarter of 2012 | 26 February 2013 |
| | First quarter of 2013 | 28 May 2013 |
| | Second quarter of 2013 | 27 August 2013 |
| | Third quarter of 2013 | 26 November 2013 |

Methodology Statistics South Africa (Stats SA) is responsible for compiling the production side of the national accounts, while the South African Reserve Bank (SARB) is responsible for compiling the expenditure side of the national accounts, as well as income and savings and the balance of payments. The SARB will release its estimates on 6 December 2012.

THE TABLES

This statistical release includes 39 tables that relate to estimates of nominal and real GDP. They cover estimates by industry on a quarterly, annual and regional basis. In addition, time-series of supply and use tables are provided. Table J provides an overview of the various tables and their contents:

Table J – Descriptions of series of tables

| Table number | Table description | | | | | | | | | | | | | | | | |
|------------------------|---|------------------------|--|-------|--------------------------|---|-----------------------------------|-------|---------------------------|------|-----------------|---|----------------------------|------|---------------------------|---|--------------------------------------|
| Tables 1 to 2 | Tables 1 and 2 show values added by industry at constant 2005 basic prices, in Rand million and as percentage changes from the same quarter in the previous year. Table 2 also includes the percentage change in the first three quarters in 2012 added together compared with the corresponding quarters in 2011. | | | | | | | | | | | | | | | | |
| Tables 3 to 4 | Tables 3 and 4 contain seasonally adjusted and annualised values added at constant 2005 basic prices by industry, in Rand million and as annualised percentage changes from the previous quarter. Seasonal adjustment is a method for removing the estimated effects of normal seasonal variation from the quarterly estimates. Although seasonality is an integral part of the quarterly data it may represent an impediment to effective analysis of the business cycle. However, irregular fluctuations because of events such as strikes can still make it difficult to interpret seasonally adjusted data. The annualised values added are equal to the seasonally quarterly data multiplied by four, while the annualised growth rates are derived by raising the change in a given quarter from the previous quarter to the power of four. The intent of annualisation is to indicate what the real growth would be if the present growth rate were to be sustained for a year. | | | | | | | | | | | | | | | | |
| Tables 5 to 7 | Tables 5 to 7 present quarterly estimates at current prices of values added by industry and GDP (Table 5), of compensation of employees (Table 6) and gross operating surplus and net other taxes on production (Table 7) by industry. Seasonally adjusted values added at current prices are available from the South African Reserve Bank (SARB). | | | | | | | | | | | | | | | | |
| Tables 8 to 9 | Tables 8 and 9 show values added at current basic prices for detailed industries in Rand million and as percentages of the total value added of all industries. The latter is the preferred measurement of the relative contributions by the different industries to GDP. The measurement of the contribution to GDP entails the contribution of productive activities. | | | | | | | | | | | | | | | | |
| Tables 10 to 11 | Tables 10 and 11 present values added at constant 2005 basic prices for detailed industries, in Rand million and as annual percentage changes. | | | | | | | | | | | | | | | | |
| Table 12 | Table 12 contains production accounts at current prices for aggregate industries. The total – the production account for the sum of all industries – does not add up to GDP at market prices. Taxes on products must be added and subsidies on products deducted as presented in Table 8. The production account can serve to illustrate the derivation of values added by both the production and income methods. It reflects the following identities: <table style="margin-left: 40px;"> <tr> <td>Output at basic prices</td> <td></td> </tr> <tr> <td>Minus</td> <td>Intermediate consumption</td> </tr> <tr> <td>=</td> <td>Gross value added at basic prices</td> </tr> <tr> <td>minus</td> <td>Other taxes on production</td> </tr> <tr> <td>plus</td> <td>Other subsidies</td> </tr> <tr> <td>=</td> <td>Value added at factor cost</td> </tr> <tr> <td>plus</td> <td>Compensation of employees</td> </tr> <tr> <td>=</td> <td>Gross operating surplus/mixed income</td> </tr> </table> | Output at basic prices | | Minus | Intermediate consumption | = | Gross value added at basic prices | minus | Other taxes on production | plus | Other subsidies | = | Value added at factor cost | plus | Compensation of employees | = | Gross operating surplus/mixed income |
| Output at basic prices | | | | | | | | | | | | | | | | | |
| Minus | Intermediate consumption | | | | | | | | | | | | | | | | |
| = | Gross value added at basic prices | | | | | | | | | | | | | | | | |
| minus | Other taxes on production | | | | | | | | | | | | | | | | |
| plus | Other subsidies | | | | | | | | | | | | | | | | |
| = | Value added at factor cost | | | | | | | | | | | | | | | | |
| plus | Compensation of employees | | | | | | | | | | | | | | | | |
| = | Gross operating surplus/mixed income | | | | | | | | | | | | | | | | |

Value added and operating surplus are derived gross of consumption of fixed capital. Consumption of fixed capital is a cost of production reflecting the wear and tear of capital assets used in the production process.

According to the production method, data on output and intermediate consumption are used to derive value added. In practice, estimates must in many cases rely on single indicators for output and the estimate of intermediate consumption must rely on assumptions that can be checked when, for instance, results from an intermittent economic survey or census become available.

The components of value added are other taxes on production, other subsidies (a negative item), compensation of employees and operating surplus/mixed income. The latter two make up value added at factor cost. According to the income method, data on the components of value added are compiled and added up. By its nature, it is difficult to get reliable data on operating surplus/mixed income, which in important respects differ from the concept of profit in business accounting. To a certain extent, the income method is used as a complement to the production method, notably for mining and manufacturing, relying on the financial statistics of Stats SA.

The concept of mixed income indicates that working proprietors and self-employed persons do not, by definition, receive wages and salaries. The surplus of their activities – the residual after deducting all costs from their income – must provide for both remuneration for their labour and a return on their capital. Hence, the term mixed income does not appear in Table 12 for general government services and other producers. There are no self-employed persons in these activities.

Table 13

Table 13 contains production accounts at constant 2005 prices for aggregate industries. In order to measure a transaction at constant prices, it must be possible, at least in principle, to factor it into a price and a volume component and keep the former component constant. This can be done either by using price indices for deflation of the current prices or volume indicators in order to extrapolate the base year value. Note that the volume component must reflect both changes in quantity and quality.

The variables that define value added in the production approach – output and intermediate consumption – can both be factored into a price and volume component. Value added at constant prices is defined as the difference between the two and cannot in itself be factored into price and volume components. Ideally, value added at constant prices should be derived by estimating output and intermediate consumption at constant prices separately, the double deflation method. Frequently, however, single indicators have to be used in practice. Value added at constant prices is then normally derived by using an output indicator. The components of value added – with the exception of compensation of employees – cannot be factored into price and volume components.

Table 14

Table 14 indicates an alternative way of presenting value added and GDP estimates at constant prices, i.e. as index numbers by industry with the base year (2005) equal to 100.

Table 15

Table 15 presents annual implied deflators for the main industries. The implied deflator is equal to the value added at current prices divided by the value added at constant prices. The GDP deflator is sometimes used as an alternative measure of inflation.

Tables 16 to 25

Tables 16 to 25 contain GDP per region – at current prices (in Rand million and percentage contributions to GDP) and at constant 2005 prices (in Rand million and percentage changes from the previous year).

Tables 26 to 35

Tables 26 to 35 contain value added per industry per region – in current prices (in Rand million and percentage contributions of each region to the total value added of the specific industry) and at constant 2005 prices (in Rand million and percentage changes from the previous year).

Tables 36 to 39

Tables 36 to 39 contain summarised sets of supply and use tables for 2008 to 2011.

Table 1 - Quarterly value added by industry and gross domestic product at constant 2005 prices (R million)

| Year | Quarter | Agriculture, forestry and fishing | Mining and quarrying | Manufacturing | Electricity, gas and water | Construction | Wholesale, retail and motor trade; catering and accommodation | Transport, storage and communication | Finance, real estate and business services | General government services | Personal services | Total value added at basic prices | Taxes less subsidies on products | GDP at market prices | Total value added at basic prices excluding agriculture |
|------|---------|-----------------------------------|----------------------|---------------|----------------------------|--------------|---|--------------------------------------|--|-----------------------------|-------------------|-----------------------------------|----------------------------------|----------------------|---|

1/ The percentage change is the growth rate from the previous year.

2/ The percentage change is the growth rate for a given quarter compared with the same quarter in the previous year.

3/ The percentage change is the growth rate for the first nine months of the year compared with the first nine months of the previous year.

Table 3 - Seasonally adjusted and annualised quarterly value added by industry and gross domestic product at constant 2005 prices (R million)

| Year | Quarter | Agriculture, forestry and fishing | Mining and quarrying | Manufacturing | Electricity, gas and water | Construction | Wholesale, retail and motor trade; catering and accommodation | Transport, storage and communication | Finance, real estate and business services | General government services | Personal services | Total value added at basic prices | Taxes less subsidies on products | GDP at market prices | Total value added at basic prices excluding agriculture |

Table 4 - Annualised percentage change in the seasonally adjusted quarterly value added by industry and gross domestic product at constant 2005 prices

| Year ^{1/} | Quar-ter ^{2/} | Agriculture, forestry and fishing | Mining and quarrying | Manu-facturing | Electricity, gas and water | Construction | Wholesale, retail and motor trade; catering and accommodation | Transport, storage and com-munication | Finance, real estate and business services | General government services | Personal services | Total value added at basic prices | Taxes less subsidies on products | GDP at market prices | Total value added at basic prices excluding agriculture |
|--------------------|------------------------|-----------------------------------|----------------------|----------------|----------------------------|--------------|---|---------------------------------------|--|-----------------------------|-------------------|-----------------------------------|----------------------------------|----------------------|---|
| 2002 | | 6,5 | 1,0 | 2,8 | 3,5 | 5,8 | 2,3 | 9,0 | 6,3 | 0,7 | 2,5 | 3,8 | 2,7 | 3,7 | 3,7 |

1/ The percentage change is the growth rate from the previous year.

2/ The annualised percentage change is the growth rate for a given quarter from the previous quarter and compounded to an annual rate.

**Table 5 - Quarterly value added by industry and gross domestic product at current prices
(R million)**

| Year | Quarter | Agriculture, forestry and fishing | Mining and quarrying | Manufacturing | Electricity, gas and water | Construction | Wholesale, retail and motor trade; catering and accommodation | Transport, storage and communication | Finance, real estate and business services | General government services | Personal services | Total value added at basic prices | Taxes less subsidies on products | GDP at market prices |

ADDITIONAL INFORMATION

Explanatory notes

Introduction

This Statistical Release contains independently compiled annual estimates of the gross domestic product (GDP) for the period 2002 to 2011. It also contains quarterly estimates of the GDP for the period 2002 to the third quarter of 2012. The estimates are based on the 1993 System of National Accounts (SNA) published by the United Nations in co-operation with other international organisations. This means that the methodology, concepts and classifications, are in accordance with the latest guidelines of an internationally agreed system of national accounts. The estimates of real GDP are expressed in terms of a 2005 base year.

Methodology

Annual GDP estimates are calculated independently from the quarterly estimates within a supply and use framework. Alternatively, annual GDP estimates are derived as the sum of the GDP for the four quarters of the relevant year in the absence of supply and use tables.

Short-term indicators are used to estimate the quarterly GDP (cf. Statistical sources and methods). However, they are by their nature incomplete in terms of coverage, and annual changes of output measured through them are generally not as reliable as in instances where the results of annual surveys are used. Therefore, the quarterly estimates must be adapted to the independent annual estimates when such estimates become available.

Regional value added and GDP estimates are calculated through the production and income approaches. The production and generation of income accounts (cf. Methodological notes) are compiled per economic activity and therefore estimates of value added by industry are available per province. The total of the regional value added by industry and GDP estimates are consistent with the annual national value added by industry and GDP estimates.

Estimates are based on a variety of sources. Industry censuses and large sample surveys are used for the bottom-up method and other less detailed data are used for the top-down method. Mixed methods (combination of the bottom-up and top-down methods) are used due to data source constraints as well as an approach to improve the quality of the estimates (cf. Statistical sources).

Classifications

The estimates of value added by industry are classified according to the Standard Industrial Classification of all Economic Activities (SIC), fifth edition. SIC is based on the third revision of the International Standard Industrial Classification of all Economic Activities (ISIC), with suitable adaptations for South African conditions. The Central Product Classification (CPC) is used to classify the supply and use of products and services.

Seasonal adjustment

The quarterly value added and GDP estimates have been seasonally adjusted. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular quarter. Influences that are volatile or unsystematic can still make it difficult to interpret.

| | |
|----------------------------------|---|
| Reliability of estimates | Revision of the estimates for all components of the national accounts is usually done every five years in conjunction with the rebasing of the estimates at constant prices. At such a time the results of censuses that have become available in the meantime and any other additional information sources are incorporated in the estimates. Due to the availability of more comprehensive data, revisions are also made of estimates for the latest quarters and, once a year, for the three latest years. |
| Related publications | Users may also wish to refer to the following publications from Stats SA - Annual Financial Statistics Quarterly Financial Statistics Quarterly Employment Statistics Quarterly Labour Force Survey Producer Price Index Consumer Price Index Financial statistics of consolidated general government Various monthly surveys |
| Unpublished Statistics | In some cases Stats SA can also make available information which is not published to users. This information can be made available electronically or through printouts. |
| Pre-release policy | Stats SA keep new estimates of economic indicators strictly confidential prior to the date and time of release. To enable selected government departments to prepare their public responses, the following pre-release procedure is applied. It accords with practice in leading statistical agencies. A strict lock-up procedure is put in place that allows media and government officials access to the data one hour before embargo. There are, however, strict controls to ensure that the information is not disseminated outside of the lock-up facility before the embargo time. |

Classification of industries

The industries used in estimating the value added were classified according to the Standard Industrial Classification of all Economic Activities (SIC), fifth edition. It is based on the third revision of the International Standard Industrial Classification of all Economic Activities (ISIC), with suitable adaptations for local conditions. For the convenience of users, the SIC is duplicated in this statistical release for easy reference. Two versions of SIC are presented, namely Table K showing only those categories of the SIC which have been used in the national accounts tables in this statistical release and Table L showing the full version of SIC (5th edition).

Table K - Categories used in the national accounts

| Title in the national accounts tables | Major division of SIC | Division of SIC |
|--|-----------------------|-----------------|
| Agriculture, forestry and fishing | 1 | |
| Agriculture | | 11 |
| Forestry | | 12 |

| Finance and insurance | | 81-83 |
| Real estate | | 84 |
| Business services | | 85-88 |
| Personal services | 9 ¹ | |
| General government services | 9 ¹ | |

¹ Major division 9 of SIC - Community, social and personal services - has been disaggregated into two categories in the national accounts tables. These categories follow other criteria than SIC and cannot be defined in terms of the divisions and groups of SIC 9. The first category - Personal services - includes private enterprises. They are market producers. In addition, it includes non-profit institutions serving households (NPISH) and domestic workers. These are also non-market producers. The second category - general government services - comprises the activities of general government in producing non-market community and social services, e.g. public administration, defence, health and education.

Table L - Standard Industrial Classification of All Economic Activities (SIC) - (5th Edition)

| Title of category | Major division | Division |
|---|-----------------------|-----------------|
| Agriculture, hunting, forestry and fishing | 1 | |
| Agriculture, hunting and related services | | 11 |
| Forestry, logging and related services | | 12 |
| Fishing, operation of fish hatcheries and fish farms | | 13 |
| Mining and quarrying | 2 | |
| Mining of coal and lignite | | 21 |
| Extraction of crude petroleum and natural gas; service activities incidental to oil and gas extraction, excluding surveying | | 22 |
| Mining of gold and uranium ore | | 23 |
| Mining of metal ores, except gold and uranium | | 24 |
| Other mining and quarrying | | 25 |
| Service activities incidental to mining of minerals | | 29 |
| Manufacturing | 3 | |
| Manufacture of food products, beverages and tobacco products | | 30 |
| Manufacture of textiles, clothing and leather goods | | 31 |
| Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials; manufacture of paper and paper products; publishing, printing and reproduction of recorded media | | 32 |
| Manufacture of coke, refined petroleum products and nuclear fuel; manufacture of chemicals and chemical products; manufacture of rubber and plastic products | | 33 |
| Manufacture of other non-metallic mineral products | | 34 |
| Manufacture of basic metals, fabricated metal products, machinery and equipment and of office, accounting and computing machinery | | 35 |
| Manufacture of electrical machinery and apparatus n.e.c. | | 36 |
| Manufacture of radio, television and communication equipment and apparatus and of medical, precision and optical instruments, watches and clocks | | 37 |
| Manufacture of transport equipment | | 38 |
| Manufacture of furniture; manufacturing n.e.c.; recycling | | 39 |
| Electricity, gas and water supply | 4 | |
| Electricity, gas, steam and hot water supply | | 41 |
| Collection, purification and distribution of water | | 42 |
| Construction | 5 | |
| Wholesale, retail and motor trade; catering and accommodation | 6 | |
| Wholesale and commission trade, except of motor vehicles and motor cycle | | 61 |

**Table L - Standard Industrial Classification of All Economic Activities (SIC) - (5th Edition)
(concluded)**

| Title of category | Major division | Division |
|--|----------------|----------|
| Retail trade, except of motor vehicles and motor cycles; repair of personal household goods | | 62 |
| Sale, maintenance and repair of motor vehicles and motor cycles; retail trade in automotive fuel | | 63 |
| Catering and accommodation | | 64 |

| Representatives of foreign governments | | 03 |
| Other activities not adequately defined | | 04 |

Classification of products

The supply and use tables allow for the comparison of statistics at a commodity level. The aggregated tables in this publication are based on a commodity classification that is closely linked to the generally expected output of a specific industry, and therefore follows the SIC closely. Table M provides a key between the commodity group and the SIC-code that would generally be the principal producer of the commodity.

Table M – Classification of commodities used in supply and use tables

| Supply and Use Table | CPC | CPC Description |
|------------------------------------|------------------|--|
| Agriculture, forestry, fishing | 01 – 04 | Agriculture, forestry and fishery products |
| Ores, minerals, electricity, water | 11 – 18 | Ores and minerals; electricity, gas and water |
| Food , beverage, textile, apparel | 211 – 293 | Food products, beverages and tobacco; textiles, apparel and leather products |
| Wood, chemical, non-metallic | 31 – 39 | Other transportable goods, except metal products, machinery and equipment |
| Metal, machinery, equipment | 411 – 499 | Metal products, machinery and equipment |
| Construction | 53 – 54 | Constructions and construction services |
| Trade, transport, distribution | 61 – 692 | Distributive trade services; accommodation, food and beverage serving services; transport services; and electricity, gas and water distribution services |
| Financial, real estate, leasing | 711 – 73 | Financial and related services; real estate services; and rental and leasing services |
| Business, production services | 81 – 89 | Business and production services |
| Community, social, personal | 91 – 95 | Community, social and personal services |

Data sources

Table N summarises the most important statistical sources from which the benchmarked, annual, regional and quarterly estimates of value added and GDP are derived. The estimates are made at both current and constant prices.

Table N - Statistical sources used in estimating benchmark, annual and quarterly value added and GDP

| Industry | Nominal estimates | Real estimates |
|----------------|--|--|
| Cross industry | <p>Benchmark/annual</p> <p>Unless stated otherwise, the estimation of benchmark and annual estimates is based on the Annual Financial Statistics and periodic large sample surveys conducted by Stats SA. The information is evaluated in a series of annual supply and use tables for internal consistency.</p> <p>Regional</p> <p>A mixture between “bottom-up” and “top-down” approaches is used in the compilation of the estimates (cf. methodological notes). “Bottom-up” data sources include the results of large sample surveys and information from large role-players in a sector, e.g. Telkom. “Top-down” sources are distribution keys based on population census results, employment data, administrative data etc.</p> <p>Quarterly</p> <p>Unless stated otherwise, labour remuneration is extrapolated according to the quarterly survey of employment and earnings conducted by Stats SA. Information from the quarterly financial survey is used where applicable.</p> | <p>Benchmark/annual</p> <p>Unless stated otherwise the constant estimates are derived from the nominal estimates developed in the supply and use framework and double-deflated with suitable price indices. The output and cost structures from the nominal estimates inform the relative weights used to develop the required composite price indicators.</p> <p>Regional</p> <p>Unless stated otherwise, the national deflator for the specific industry is used to derive the real estimates.</p> <p>Quarterly</p> <p>Various price indices are used to derive estimates at constant prices from the nominal estimates. Extrapolation of estimates is done through short-term indicators where available.</p> |
| | <p>Non-observed economy</p> <p>Information was obtained from administrative and enforcement records of the South African Police Service (SAPS), South African Revenue Service (SARS), other associations (e.g. SWEAT for prostitution) and information on other country experiences.</p> <p>Estimates on housing stock and rental values were obtained from the 2007 Community Survey, 2005/6 Income and Expenditure survey and 2005 General Household Survey</p> <p>Informal sector estimates were based on the Survey of Employers and Self-employed 2004 as well as the Labour Force Survey</p> | <p>Non-observed economy</p> <p>Various price indices are used to derive estimates at constant prices from the nominal estimates. Extrapolation of estimates is done through short-term indicators where available.</p> |

Glossary

Table O describes and defines relevant national accounting and other terms used in this publication.

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP

| Term | Description |
|------------------------------|--|
| Ancillary activity | An ancillary activity is a supporting activity undertaken to create the conditions within which the activities of an enterprise are carried out. |
| Annualised percentage change | The annualised percentage change is the growth rate of a given quarter compared with the previous quarter, compounded to an annual rate. |
| Balancing items | A balancing item is an accounting construct obtained by subtracting the total value of the entries on one side of an account from the total value of the entries on the other side. Balancing items are not simply devices introduced to ensure that accounts balance. They encapsulate a great deal of information and include some of the most important entries in the accounts, for example value added and operating surplus. |
| Basic prices | The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable plus any subsidy receivable on that unit as a consequence of its production or sale. Basic prices exclude any transport charges invoiced separately by the producer. Basic prices is the preferred method of valuing output. |
| Benchmark years | Benchmark years refer to those years in respect of which authoritative and detailed data are available. |
| Commodity flow method | The commodity flow method is used to track the flow of goods and services from the supply (domestic production or imported) to the use (intermediate consumption, final consumption or exports) thereof. |
| Compensation of employees | Compensation of employees is defined as the total remuneration, in cash or in kind, payable by an employer to an employee in return for work done by the latter during the accounting period. It is recorded on a gross basis, before any deduction for income taxes, pensions, unemployment insurance and other social insurance schemes. It also includes other forms of compensation, namely commissions, tips, bonuses, directors' fees and allowances such as these for holidays and sick leave, as well as military pay and allowances. It excludes employers' social contributions. |
| Constant prices | Constant price is a valuation concept expressed at the prices prevailing during a fixed reference period or base period. The base period for national accounts estimates at constant prices is 2005, which means that they have been restated at 2005 prices. |
| Consumer Price Index (CPI) | An index that measures the prices of a fixed basket of consumer goods and services |
| Current prices | A valuation at current prices is expressed at the prices prevailing during the period being referred to. |

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

| | |
|--|---|
| Cost, insurance and freight price | The cost, insurance and freight price (c.i.f.) is the price of a good delivered at the frontier of the importing country, or the price of a service delivered to a resident, before payment of any import duties or other taxes on imports or trade and transport margins within the country. |
| Enterprise | An enterprise may be a corporation (a quasi-corporate enterprise is treated as if it is a corporation in the SNA), a non-profit institution or an unincorporated enterprise. Corporate enterprises and non-profit institutions are complete institutional units. An unincorporated enterprise, however, refers to an institutional unit – a household or government unit – only in its capacity as a producer of goods and services. It covers only those activities of the unit which are directed towards the production of goods and services. |
| Establishment | An establishment is defined as an enterprise or part of an enterprise that is situated at a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added. |
| Factor cost | Factor cost is a valuation reflecting the cost of the factors of production (labour and capital). It corresponds to the value remaining after all applicable taxes and subsidies have been deducted from market prices. |
| Final demand | Different components of final demand are distinguished in the SU-tables. The supply table shows imports and the use table shows final consumption expenditure by households and the general government as well as gross capital formation (gross fixed capital formation and changes in inventories) and exports. |
| Financial services indirectly measured | Financial services indirectly measured (FSIM) is measured in the SNA as the total property income receivable by financial intermediaries minus their total interest payable, excluding the value of any property income receivable from the investment of their own funds. Therefore, income does not arise from financial intermediation. |
| Free on board price | The free on board price (f.o.b.) is the purchaser's price paid by an importer taking delivery of goods at the exporter's frontier after loading on to a carrier and after payment of any export taxes or the receipt of any tax rebates. |
| GDP at market prices | GDP at market prices equals total gross value added by all industries at basic prices plus taxes on products minus subsidies on products. |
| GDP for the economy | GDP for the entire economy is equal to GDP at market prices. It is essentially a production measure as it is obtained through the sum of the gross values added of all resident institutional units, in their capacity as producers, <i>plus</i> the values of any taxes, <i>less</i> subsidies, on production or imports not already included in the values of the outputs and values added by resident producers. |
| GDP per region (GDPR) | GDPR at market prices equals the sum of gross value added by all industries at basic prices plus taxes on products minus subsidies on products in a region. |
| Generation of income account | The generation of income account provides for the distribution of primary incomes to the various institutional sectors. Primary incomes are incomes that accrue to institutional sectors and industries as a consequence of their involvement in processes of production or ownership of assets that may be needed for purposes of production. |

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

| | |
|--|--|
| Goods and services account | The goods and services account shows the total resources (output and imports) and uses of goods and services (intermediate consumption, final consumption, gross capital formation and exports). Taxes on products (less subsidies) are also included on the resource side of the accounts. |
| Gross operating surplus/Mixed income | Gross operating surplus or mixed income is the balancing item in the generation of income account, i.e. the value added <i>minus</i> compensation of employees payable <i>minus</i> taxes on production payable <i>plus</i> subsidies receivable. |
| Gross value added at basic prices | Gross value added at basic prices is defined as output valued at basic prices less intermediate consumption valued at purchasers' prices. |
| Gross value added at producer's prices | Gross value added at producers' prices is defined as output valued at producers' prices less intermediate consumption valued at purchasers' prices. |
| Homogeneous production | A unit of homogeneous production is defined as a producer unit in which only a single (non-ancillary) productive activity is carried out. |
| Illegal economy | The illegal economy is the activities in the resale, distribution or ownership of goods and services forbidden by law and legal activities carried out by unauthorised producers. |
| Implied deflator | Implied deflators are also known as variable-weighted or "Paasche" indices (although not strictly of the Paasche type). These price indices are a by-product of the deflation procedure, obtained by dividing a series (e.g. value added) expressed at current prices by the corresponding series at constant prices. |
| Industries | Industries are defined in the SNA in the same way as in the Standard Industrial Classification (SIC). An industry consists of a group of establishments engaged in the same or similar kinds of activity. |
| Informal economy | The informal economy is broadly characterised as consisting of units engaged in the production of goods or services with the primary objective of generating employment and incomes to the persons concerned. These units typically operate at a low level of organisation, with little or no division between labour and capital as factors of production and on a small scale. |
| Institutional unit | An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and in transactions with other entities. |
| Intermediate consumption | Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets. Consumption of fixed assets is recorded as consumption of fixed capital. |
| Net other taxes on production | Other taxes on production minus other subsidies on production. |
| Non-observed economy | The non-observed economy is the extent of the economic activity missing from statistical data collections and from administrative sources. |

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

| | |
|--|---|
| Operating surplus or mixed income | Operating surplus or mixed income is the balancing item in the generation of income account i.e. the value added minus compensation of employees payable minus taxes on production payable plus subsidies receivable. |
| Other subsidies on production | Subsidies are transfers from the government to the business sector toward the current cost of production. These transfers represent additions to the income of producers from current production. |
| Other taxes on production | Other taxes on production consist of taxes on the ownership of land, buildings or other assets used in production or on labour employed, etc. Important examples of other taxes on production are taxes on payroll or work force, stamp duties, business or professional licences, etc. |
| Output | Output is defined in the context of a production account. Production accounts are compiled for establishments or enterprises, and not for processes of production. Therefore, output consists only of those goods or services that are produced within an establishment that become available for use outside that establishment. |
| Percentage change | The percentage change in a variable from one period to another is its change in value (value in the second period less its value in the first period) divided by its value in the first period, multiplied by 100. Growth in GDP is usually measured by its percentage change. |
| Primary industries | The primary industries include the agriculture, forestry and fishing industry and the mining and quarrying industries. |
| Principal activity | The principal activity of an establishment is the activity whose gross value added exceeds that of any other activity carried out within the same unit. |
| Producer Price Index (PPI) | The producer price index indicates changes in producer prices of locally produced commodities (including exports), imports and exports |
| Producers' price | The producer's price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser. It excludes any transport charges invoiced separately by the producer. |
| Production boundary | The general production boundary is defined as an economic activity (or production) carried out under the control and responsibility of an institutional unit that uses inputs of labour, capital, and goods and services to produce output of goods and services. The production boundary in the 1993 SNA is more restricted than the general production boundary due to the production accounts not being compiled for household activities that produce domestic or personal services for own final consumption within the same household, except for services produced by paid domestic staff. |
| Production account for the total economy | The production account is the first in the sequence of accounts compiled for institutional sectors, industries and the total economy. The production account contains three items apart from the balancing item namely output, intermediate consumption and taxes less subsidies on products. The output is recorded under resources on the right-hand side of the account. Intermediate consumption and taxes less subsidies on products is recorded under uses on the left-hand side of the account. |

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

| | |
|---------------------------------|--|
| Purchaser's price | The purchaser's price is the amount paid by the purchaser, excluding any deductible value added tax (VAT) or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place. |
| Region | A region for GDP estimates per region is defined as a province. |
| Revision of estimates | Revision of the estimates for all components of the national accounts is usually done every five years in conjunction with the rebasing of the estimates at constant prices apart from the revision of estimates for the latest quarters. At such a time the results of surveys that have become available in the meantime and any other additional information sources are incorporated in the estimates. |
| Secondary activity | A secondary activity is an activity carried out within a single establishment in addition to the principal activity. |
| Secondary industries | The secondary industries include the manufacturing, electricity, water and construction industries. |
| Subsidies | Subsidies are transfers from the government to the business sector towards the current cost of production. These transfers represent additions to the income of producers from current production. |
| Subsidies on products | Subsidies on products are payable per unit of a good or service. |
| Supply and use tables | The SU-tables are sometimes referred to as rectangular input-output tables, make and use tables, supply and disposition of commodities tables. |
| Supply table | The supply table gives information about the resources of goods and services. |
| Symmetric | Symmetric tables use similar classifications or units, i.e. same groups of products for both the rows and the columns. |
| System of National Accounts | System of National Accounts (SNA) refers to an internationally-agreed standard system for macro-economic accounts. The latest version is described in the System of National Accounts 2008, although South Africa still uses SNA 1993. |
| Taxes on production and imports | Taxes on production and imports are taxes which add to the cost of production and which are likely to be reflected in market prices paid by the purchaser, such as sales and excise taxes, import duties and property taxes. Taxes on production and imports include taxes on products and other taxes on production. |
| Taxes on products | Taxes on products consist of taxes payable on goods and services when they are produced, delivered, sold or otherwise disposed of by their producers. Furthermore, they are payable per unit of a good or service produced. Important examples of taxes on products are excise and import duties and value added tax (VAT). |

Table O - Glossary of statistical sources used in estimating benchmark, annual and quarterly value added and GDP (concluded)

| | |
|-------------------------|---|
| Underground economy | The underground economy includes activities that may be both productive in an economic sense and also quite legal but deliberately concealed from public authorities to avoid the payment of taxes, payment of social security contributions, meeting certain legal standards or complying with certain administrative procedures. |
| Use Table | The use table gives information on the uses of goods and services, and also on cost structures of the industries. |
| Value added components | The use table distinguishes between three different components of value added, i.e. compensation of employees, other taxes less subsidies on production and gross operating surplus/mixed income. |
| Tertiary industries | Tertiary industries include wholesale, retail and motor trade, catering and accommodation, transport, storage and communication, finance, real estate and business services, community, social and personal services, general government services, and other producers. |
| Value added by industry | Value added measures the value created by production and may be calculated either before or after deducting the consumption of fixed capital from the fixed assets used. Gross value added is defined as the value of output less the value of intermediate consumption. Value added is the balancing item in the production account for an institutional unit or sector, or establishment or industry. |

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.
