Fourth quarter
1996**

Statistical release P0441

Co-operation between the resident and non-resident statistical services of the government and the private sector is essential for a successful operation and the release of reliable official statistics.

Co-operation between the Central Statistical Service and the RSA, the private sector and the institutions is essential for a successful operation in the RSA. Without this continued co-operation and goodwill, the timely release of relevant and reliable statistics will not be possible.

The CSS releases are published in English and Afrikaans. The releases are also published in the other official languages of the RSA. The releases are also published in the other official languages of the RSA.

The CSS releases are published in English and Afrikaans. The releases are also published in the other official languages of the RSA. The releases are also published in the other official languages of the RSA. In the light of expenditure restraints in the RSA, it is no longer economically viable to produce releases in one of the eleven official languages in the RSA. The releases are also extensively used by the media and other interested parties. The 1996 CSS releases will be published in English and Afrikaans.

GROWTH IN GDP IN 1996 MEETS EXPECTATIONS OF 3%

Review of the annual trend

According to the latest estimates, based on preliminary indicators, the total real GDP at market prices increased by 3,1% in 1996, which is slightly less than the 3,4% increase in 1995. At factor incomes however, the growth rate of 3,0% for 1996 is almost the same as that of 1995 (2,9%). Although the growth rate was more or less the same in both years, completely different sectors were mainly responsible for the growth in each year. In 1996 the agricultural sector, with an increase of 25,8%, was the main contributor to total growth followed by the trade sector, whereas in 1995 manufacturing (with 7,6% growth) was the main contributor to total growth, followed also by the trade sector as second largest contributor.

The growth rate in the non-agricultural sector declined from 3,9% in 1995 to only 1,9% in 1996. This was mainly the result of a sharp drop in the average annual growth rate of the manufacturing sector, namely, from 7,6% in 1995 to only 0,4% in 1996 (due largely to appreciable drops in local production of clothing, textiles, basic iron and steel, local motor vehicles and accessories and paper as indicated in other CSS publications).

Review of the quarterly trend

As far as the quarterly trend is concerned the latest estimates show that the total seasonally adjusted real GDP increased by an annualised rate of 3,3% at market prices in the fourth quarter of 1996, which does not differ much from the growth rate in the previous three quarters of 1996.

The annualised growth rate in the seasonally adjusted real GDP of the non-agricultural sector at factor incomes has however, improved markedly from 0,7% in the third quarter of 1996 to 2,5% in the fourth quarter. This is mainly the result of positive growth rates in the mining (1,0%); and manufacturing (2,2%) sectors, and trade and catering (2,8%) within tertiary industries, in the fourth quarter of 1996 following declines of respectively 7,4%; 0,9% and 0,1% in these sectors in the third quarter. The other sectors all showed positive growth rates in both the third and fourth quarter.

The quarterly changes in the GDP at constant 1990 prices at seasonally adjusted annualised rates are as follows:

	1995		1996			
	3	4	1	2	3	4
	%	%	%	%	%	%
GDP at constant 1990 prices

EXPLANATIONS AND DEFINITIONS

Scope

The estimates cover the Republic of South Africa including the former TBVC States.

Gross domestic product at factor incomes

The gross domestic product at factor incomes is equal to the remuneration received by the production factors i.e. the wages, interest and depreciation, rent and profit earned by labour, capital, land and entrepreneurship respectively for their participation in the domestic production. The production of the various industries are valued at factor incomes only.

Gross domestic product at market prices

The gross domestic product at market prices is equal to the gross domestic product at factor incomes plus total indirect taxes paid (such as VAT, excise duty, import duty, etc.) minus total subsidies received (e.g. payments from government to businesses).

Remuneration of employees

Gross salaries and wages; remuneration in kind (food, housing, etc.); employers' contributions to staff funds and to social security funds, and remuneration to managing and working directors.

Gross operating surplus (Other income)

Operating surplus of businesses before deduction of net interest paid, depreciation allowances and income tax.

General government

All producers of general government services. These comprise public administration and defence, as well as education, medical services, etc. In many cases no direct payments are made for these services by users.

Other producers

Non-profit institutions serving households (universities, trade unions, etc.) as well as domestic workers (staff in the service of households).

Revision of estimates

Apart from the usual revision of the estimates for the latest quarters, the estimates for all components of the national accounts are usually investigated and revised every five years in conjunction with the rebasing of the estimates at constant prices. At such a time the results of censuses that have become available in the meantime are incorporated in the estimates.

Timing of publication

Since the beginning of 1996 the CSS publishes its GDP estimates for a given quarter after sixty days, and not, as before, within forty-five days. This allows the CSS to incorporate information from the first two months of the given quarter; and also to issue current price estimates at the same time.

Gross Domestic Product at factor incomes at constant 1990 prices. Seasonally adjusted. Quarterly % change at annual rates.
