KEY FINDINGS FOR THE FOURTH QUARTER OF 2007

Real gross domestic product (GDP) at market prices increases by 5,3 percent during the fourth quarter of 2007.

According to latest the preliminary indicators, the seasonally adjusted estimate of the real GDP at market prices for the fourth quarter of 2007 increased by an annualised rate of 5,3 percent compared with the third quarter of 2007, following real annualised economic growth rates of 5,1 percent (revised from an increase of 5,0), 4,4 percent and 4,8 percent (revised from an increase of 4,7 percent) during the first, second and third quarters of 2007 compared with the fourth quarter of 2006 and the first and second quarters of 2007 respectively (see table 4).

The seasonally adjusted real value added at basic prices for all industries – which is equal to GDP minus taxes on products plus subsidies on products – increased by an annualised rate of 5,1 percent (revised from an increase of 5,0 percent), 4,4 percent, 5,1 percent (revised from an increase of 4,9 percent) and 5,5 percent during the first, second, third and fourth quarters of 2007 compared with the fourth quarter of 2006 and the first, second and third quarters of 2007 respectively (see figure 1 and table 4).

The unadjusted real GDP at market prices increased by 5,8 percent (revised from an increase of 5,7 percent), 5,1 percent (revised from an increase of 5,0 percent), 5,2 percent (revised from an increase of 5,1 percent) and 4,6 percent during the first, second, third and fourth quarters of 2007 compared with the first, second, third and fourth quarters of 2006 respectively (see table 2).

The seasonally adjusted real value added by non-agricultural industries (excluding the impact of the volatile agriculture industry) increased by 5,1 percent, 4,3 percent (revised from an increase of 4,4 percent), 5,1 percent and 5,4 percent during the first, second, third and fourth quarters of 2007 compared with the fourth quarter of 2006 and the first, second and third quarters of 2007 respectively.

Figure 1 - Annualised growth rate in the seasonally adjusted real value added at basic prices

Quarterly real value added by industry

Table A shows the contribution of the different industries, and taxes less subsidies on products, to the annualised percentage change in the seasonally adjusted real GDP for the eight quarters from the first quarter of 2006 onwards. The impact of an industry on the change in real GDP depends on two factors: the increase or decrease in the real value added of the industry and its relative size, measured as its share of GDP in the previous quarter. Thus, the 5,3 percent annualised increase in the seasonally adjusted real GDP during the fourth quarter of 2007 was mainly due to increases in the finance, real estate and business services industry (1,8 of a percentage point); manufacturing (1,3 of a percentage point); the construction industry and general government sector (0,5 of a percentage point each), the wholesale, retail and motor trade, hotels and restaurants industry and the transport, storage and communication industry (0,3 of a percentage point each) and agriculture, forestry and fishing industry and personal services industry (0,2 of a percentage point).(see table A last column).

Table A - Contributions of the annualised percentage change in seasonally adjusted real value added by industry to the annualised percentage change in seasonally adjusted real GDP

Industry	Relative size 2007Q4 ¹ (percent)	Seasonally adjusted real annualised change from the previous quarter (percentages)								Contributions to the seasonally adjusted annualised changes in real GDP (percentage points) ²							
		2006				2007				2006				2007

<i>Total value added</i>	<i>91,1</i>	<i>6,1</i>	<i>5,9</i>	<i>4,7</i>	<i>6,0</i>	<i>5,1</i>	<i>4,4</i>	<i>5,1</i>	<i>5,5</i>	<i>5,5</i>	<i>5,4</i>	<i>4,3</i>	<i>5,4</i>	<i>4,6</i>	<i>4,1</i>	<i>4,6</i>	<i>5,0</i>
Taxes less subsidies on products	8,9	7,5	8,8	5,6	6,2	5,4	3,5	1,9	3,7	0,7	0,8	0,5	0,6	0,5	0,3	0,2	0,3
GDP at market prices	100,0	6,2	6,2	4,8	6,0	5,1	4,4	4,8	5,3	6,2	6,2	4,8	6,0	5,1	4,4	4,8	5,3

¹ The relative size of each industry for the fourth quarter of 2007 is the share of its seasonally adjusted real value added of the seasonally adjusted GDP for the third quarter of 2006. Similarly, the relative size of taxes less subsidies on products is the share of its seasonally adjusted value of the seasonally adjusted GDP for the third quarter 2006.

² The contribution is calculated by multiplying the percentage change of each industry (and taxes less subsidies on products) by its share of GDP in the previous quarter (i.e. its relative size).

The seasonally adjusted real value added by the agriculture, forestry and fishing industry increased at an annualised rate of 10,4 percent during the fourth quarter of 2007 compared with the third quarter of 2006, following annualised increases of 3,8 percent (revised from 2,0 percent), 9,0 percent (revised from 4,4 percent) and 5,8 percent (revised from 0,5 percent) in the first, second and third quarters of 2007 compared with the fourth quarter of 2006, the first and the second quarters of 2007 respectively. The annualised increase of 10,4 percent reflected in the fourth quarter of 2007 can be attributed to good performance in animal production. The unadjusted real value added by the agriculture, forestry and fishing industry for the fourth quarter of 2007 increased by 3,6 percent compared with the fourth quarter of 2006. The annual real value added increased by 0,3 percent in 2007.

The seasonally adjusted real value added by the mining and quarrying industry decreased at an annualised rate of 1,7 percent during the fourth quarter of 2007 compared with the third quarter of 2007, following an annualised decrease of 8,8 percent, 3,1 percent and an increase of 4,0 percent during the first, second and third quarters of 2007 compared with the fourth quarter of 2006 and the first and the second quarters of 2007 respectively. The decrease of 1,7 percent was mainly due to a decrease in the production of coal, gold and mining of other metal ores. The unadjusted real value added by the mining and quarrying industry for the fourth quarter of 2007 decreased by 4,1 percent compared with the fourth quarter of 2006. The overall performance of this industry reflected a decrease of 0,6 percent in the annual real value added in 2007.

The seasonally adjusted real value added by the manufacturing industry increased by an annualised rate of 8,2 percent during the fourth quarter of 2006 compared with the third quarter of 2006, following an annualised increase of 4,5 percent, and decreases of 0,1 percent and 2,5 percent in the first, second and third quarters of 2007 compared with the fourth quarter of 2006 and the first and the second quarter of 2007 respectively. This increase was mainly due to increased activities in the petroleum products, chemicals, rubber and plastic products industries; metals, metal products, machinery and equipment and transport equipment. The unadjusted real value added by the manufacturing industry for the fourth quarter of 2007 increased by 2,8 percent compared with the fourth quarter of 2005. The annual real value added increased by 3,9 percent in 2007 compared with 2006.

The electricity, gas and water industry reflected an annualised decrease in the seasonally adjusted real value added of 1,8 percent during the fourth quarter of 2007 compared with the third quarter of 2007, following annualised increases of 3,4 percent, 2,8 percent and 3,0 percent in the first, second and third quarters of 2007 compared with the fourth quarter of 2006 and the first and the second quarter of 2007 respectively. The decrease of 1,8 percent was mainly due to a decrease in the production of electricity. The unadjusted real value added by the electricity, gas and water industry for the fourth quarter of 2007 increased by 2,9 percent compared with the fourth quarter of 2006. The annual real value added by the electricity, gas and water industry increased by 3,2 percent in 2007.

The seasonally adjusted real value added by the construction industry increased at an annualised rate of 14,2 percent during the fourth quarter of 2007 compared with the third quarter of 2007 following annualised increases of 29,1 percent, 11,8 percent and 14,7 percent during the first, second and third quarters of 2007 compared with the fourth quarter of 2006 and the first and the second quarters of 2007 respectively. The unadjusted real value added by the construction industry for the fourth quarter of 2007 increased by 16,8 percent compared with the fourth quarter of 2006. The annual real value added by this industry increased by 18,1 percent in 2007.

The seasonally adjusted real value added by the wholesale and retail trade, hotels and restaurants industry increased at an annualised rate of 2,1 percent during the fourth quarter of 2007 compared with the third quarter of 2007. The first three quarters of 2006 recorded annualised growth rates of 5,1 percent, 4,7 percent and 4,5 percent compared with the fourth quarter of 2006, and the first and second quarters of 2007 respectively. The increase of 2,1 percent was mainly due to annualised increases reflected by the wholesale trade and motor trade. The unadjusted real value added by this industry for the fourth quarter of 2007 increased by 3,4 percent compared with the fourth quarter of 2006. The annual real value added by this industry increased by 5,0 percent in 2007.

The seasonally adjusted real value added by the transport, storage and communication industry increased at an annualised rate of 3,6 percent during the fourth quarter of 2007 compared with the third quarter of 2007, following annualised growth rates of 6,0 percent, 6,1 percent and 4,4 percent during the first, second, and third quarters of 2007 compared with the fourth quarter of 2006 and the first and the second quarters of 2007 respectively. The 3,6 percent increase was mainly due to increased activities related to land transport and communication services industries. The unadjusted real value added by this industry for the fourth quarter of 2007 increased by 5,3 percent compared with the fourth quarter of 2006. The annual real value added by this industry increased by 5,2 percent in 2007.

The real value added by finance, real estate and business services industry increased by seasonally adjusted annualised rates of 8,5 during the fourth quarter of 2007, compared with the third quarter of 2007 and 7,6 percent (revised from 7,4), 10,2 percent (revised from 10,4) and 12,3 percent (revised from 12,1) in the first, second, and third quarters of 2007, compared with the fourth quarter of 2006 and the first, the second and the third quarters of 2007 respectively. The 8,5 percent increase was mainly due to increased activities related to finance and insurance. The unadjusted real value added by this industry for the fourth quarter of 2007 increased by 9,3 percent compared with the fourth quarter of 2006. The real value added by the finance, real estate and business services industry increased by 8,3 percent in 2007.

The real value added by the general government services sector industry increased by seasonally adjusted annualised rates of 4,4 percent fourth quarters of 2007, compared with the third quarter of 2007 and 4,1 percent, 1,2 percent and 3,3 percent in the first, second, and third quarters of 2007, compared with the fourth quarter of 2006 and the first, the second quarters of 2007 respectively. The unadjusted real value added by this industry for the fourth quarter of 2007 increased by 3,3 percent compared with the fourth quarter of 2006. The annual real value added by the personal services industry in 2007 increased by 3,4 percent compared with 2006.

Finally, the seasonally adjusted real value added by the personal services industry reflected an annualised increase of 4,3 percent during the fourth quarter of 2007 compared with the third quarter of 2007. The first, second and third quarters of 2007 recorded annualised increases of 2,8 percent, 4,3 percent and 5,1 percent compared with the fourth quarter of 2006 and the first and the second quarters of 2007, respectively. The unadjusted real value added by this industry for the fourth quarter of 2007 increased by 2,4 percent compared with the fourth quarter of 2006. The annual real value added by this industry increased by 4,1 percent in 2007 compared with 2006.

KEY FINDINGS FOR THE ANNUAL ESTIMATES OF 2007

Real annual gross domestic product (GDP) at market prices increased by 5,1 percent in 2007, following an increase of 5,4 percent in 2006.

First preliminary annual estimates of gross domestic product (GDP) are derived as the sum of the GDP for the four quarters of the specific year. These estimates indicate that the real annual GDP at market prices (at 2000 prices) increased by 5,1 percent in 2007 compared with 2006. The main contributors to the increase in economic activity in 2007 were the finance, real estate and business services (1,6 of a percentage point), wholesale, retail trade, hotels and restaurants (0,7 of a percentage point), manufacturing and construction (each contributing 0,6 of a percentage point), transport and communication (0,5 of a percentage point) and general government sector (0,4 percentage point) (see. table B, last column).

Table B – Contribution of the percentage change in real value added by industry to the total real annual economic growth rate (real GDP at market prices)

Industry	Relative size 2007 (percent)	Real annual percentage change for the year 2005 (compared with 2004), 2006 (compared with 2005) and 2007 (compared with 2006)				Contributions to the total real annual economic growth rate (percentage points) ²			
		2004	2005	2006	2007	2004	2005	2006	2007
Agriculture, forestry and fishing	2,3	1,4	5,4	-7,9	0,3	0,0	0,1	-0,2	0,0
Mining and quarrying	5,8	1,3	2,2	-0,1	-0,6	0,1	0,1	0,0	0,0
Manufacturing	16,3	4,7	4,6	5,2	3,9	0,8	0,8	0,8	0,6
Electricity, gas and water	2,1	3,0	1,7	3,0	3,2	0,1	0,0	0,1	0,1
Construction	3,1	11,1	12,4	14,7	18,1	0,3	0,3	0,4	0,6
Wholesale and retail trade; hotels and restaurants	14,1	5,9	7,3	7,0	5,0	0,8	1,0	1,0	0,7
Transport, storage and communication	9,7	4,7	5,3	5,0	5,2	0,5	0,5	0,5	0,5
Finance, real estate and business services	19,6	7,9	5,2	8,6	8,3	1,5	1,0	1,7	1,6
General government services	12,7	2,6	3,4	3,1	3,4	0,3	0,4	0,4	0,4
Personal services	5,3	2,0	4,4	4,5	4,1	0,1	0,2	0,2	0,2
<i>Total value added</i>	<i>91,1</i>	<i>4,8</i>	<i>5,0</i>	<i>5,3</i>	<i>5,2</i>	<i>4,4</i>	<i>4,6</i>	<i>4,9</i>	<i>4,7</i>
Taxes less subsidies on products	8,9	5,3	4,8	6,1	4,8	0,5	0,4	0,5	0,4
GDP at market prices	100,0	4,9	5,0	5,4	5,1	4,9	5,0	5,4	5,1

1. The relative size of each industry for the year 2007 is the share of its real value added of the GDP for the year 2006. Similarly, the relative size of taxes less subsidies on products is the share of its value of the GDP for the year 2006.

2. The contribution is calculated by multiplying the percentage change of each industry (and taxes less subsidies on products) with its share of GDP in the previous year (i.e. its relative size).

 Statistician-General: Statistics South Africa

METHODOLOGICAL NOTES FOR GDP COMPILATION

Introduction This statistical release contains annual estimates of the GDP for the years 1994 to 2007, calculated from the production side whereby GDP is derived through the sum of values added of different economic activities or industries. It also contains quarterly estimates of GDP for the period 1999 to fourth quarter 2007. Stats SA is responsible for compiling the production side of the national accounts, while the SARB is responsible for compiling the expenditure side of the national accounts, as well as income and savings and the balance of payments. The SARB will release their estimates on 19 March 2008.

1993 System of National Accounts International practice requires national accounts estimates to be revised at least every five years. Statistics South Africa implemented the 1993 System of National Accounts (SNA93) in 1999 in conjunction with the rebasing and benchmarking of its national accounts estimates. The SNA93 is an internationally agreed methodology used for its compilation of national accounts estimates.

Annual GDP estimates Prior to June 1999 (when the SNA93 was implemented), Stats SA only compiled quarterly national accounts estimates. The annual estimates of GDP were derived as the sum of the GDP for the four quarters of the specific year.

Stats SA implemented the SNA93 in June 1999 in conjunction with the revision, benchmarking and rebasing (to 1995 levels) of the national accounts. Stats SA revises, benchmarks and re-bases the GDP estimates on a periodic (5-yearly) basis. The results of the latest benchmarking and rebasing of national accounts exercise was published in November 2004. Benchmarking is done in order to, inter alia; recalculate the relative weights of industries in the constant price estimates of GDP and to incorporate new data sources and activities that have been identified since the previous benchmarking exercise.

Independent annual national accounts estimates for 2006 and 2007 will be published in November 2008. The annual national accounts estimates for 2006 will be final estimates, while the estimates for 2007 will be the second preliminary estimates.

The purpose of independent annual estimates is to benchmark the level of GDP-estimates for the specific year by incorporating new data that was not yet available when the preliminary annual and quarterly estimates were compiled. The annual revision of GDP estimates through the independently compiled national accounts should be seen as part of the periodic benchmarking process, as it will assist in smoothing the effect of changing the level-estimates of GDP periodically.

The practice of deriving at a first indication of the annual GDP, through the sum of the GDP for the four quarters of the specific year, as soon as the GDP for fourth quarter of a specific year is estimated, is still widely used. Therefore, Stats SA publishes the first preliminary annual GDP estimates for a specific year as soon as the GDP estimates for the fourth quarter of the relevant year is available. The sum of the value added of the different industries for the four quarters of 2007 gives the first indication of the value added for the year 2007.

According to the revision policy of Stats SA regarding the compilation of National Accounts for South Africa, annual and quarterly national accounts estimates are revised annually when independent annual national accounts estimates for the latest two years and the latest ten quarters are compiled using more comprehensive economic and socio-economic information, e.g. annual reports and financial statements of enterprises and results of household surveys, which became available since the previous independent annual estimates were published. These sources are generally speaking, more reliable than the sources used for the quarterly estimates. Therefore, revisions made to the annual value added of an industry, impact on the quarterly value added of an industry of that year, as well as value added estimates of the following quarters of that specific industry.

Quarterly estimates

Quarterly estimates of value added in nominal and real terms were based on the annual nominal and real estimates referred to earlier. The development of quarterly estimates of GDP, and the accompanying growth rates, has as its principle objective, the preservation of as much of the short-term series movements as possible, given the constraints of new annual estimates. It is important to preserve as much as possible of the short-term movements in the new series, as it is of central interest in quarterly national accounts.

To this extent use was made of the Proportional Denton Method. It is a technique that implicitly constructs, from the revised annual ratios between estimates of value added and the underlying indicators, a quarterly series of ratios between value added and the underlying indicators. It operates under the constraints that the quarterly ratio averages to the annual ratios for each year that has a revised annual estimate of GDP.

Level of detail

The benchmarked estimates (within the supply and use tables), were done on a more detailed level than what is published.

Stats SA continues its policy of developing independent annual estimates of GDP that are based on more comprehensive datasets when compared to the estimates of quarterly

GDP. Short-term indicators are used to estimate the quarterly GDP. However, they are by their nature incomplete in terms of coverage and annual changes of output measured through them are generally not as reliable as in instances where the results of annual surveys are used.

An added advantage is that the annual GDP estimates contain more details on industries and variables.

THE TABLES

Tables layout	The results of the quarterly value added and GDP estimates are presented in tables 1 to 7. Table 8 contains summarised supply and use tables.
Tables 1 to 2	Table 1 and 2 show values added by industry at constant 2000 basic prices, in Rand million and as percentage changes from the same quarter in the previous year. Table 2 also includes the percentage increase in four quarters of 2007 added together compared to the corresponding quarters of 2006.
Tables 3 to 4	Table 3 and 4 contain seasonally adjusted and annualised values added at constant 2000 basic prices by industry, in Rand million and as annualised percentage changes from the previous quarter. Seasonal adjustment is a method for removing the estimated effects of normal seasonal variation from the quarterly estimates. Although seasonality is an integral part of the quarterly data it may represent an impediment to effective analysis of the business cycle. However, irregular fluctuations because of events such as strikes can still make it difficult to interpret seasonally adjusted data. The annualised values added are equal to the seasonally quarterly data multiplied by four, while the annualised growth rates are derived by raising the change in a given quarter from the previous quarter to the power of four. The intent of annualisation is to indicate what the real growth would be if the present growth rate were to be sustained for a year.
Tables 5 to 7	Tables 5 to 7 present quarterly estimates at current prices of values added by industry and GDP (table 5) and of compensation of employees (table 6) and gross operating surplus and net other taxes on production (table 7) by industry. Seasonally adjusted values added at current prices are available on request.
Table 8	Table 8 contains a set of supply and use tables for 2006.

NOTES

Forthcoming issues	Issue	Expected date of publication
	First quarter of 2008	27 May 2008
	Second quarter of 2008	26 August 2008
	Third quarter of 2008	25 November 2008
	Fourth quarter of 2008	24 February 2009

Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF)

South Africa’s data dissemination practices are assessed against the IMF’s Special Data Dissemination Standard (SDDS). A detailed description of the SDDS can be found on the IMF’s Dissemination Standards Bulletin Board on the internet at <http://dsbb.imf.org>. This is a ‘best practice’ standard. It covers four sectors of the economy i.e. the real, fiscal, financial and external sectors, as well as population and identifies four dimensions i.e. data, access, integrity and quality, of data dissemination. For each of these dimensions, the SDDS prescribes two to four monitorable elements or good practices that can be observed, or monitored, by users of statistics. However, the IMF’s monitoring of the SDDS as authorised by the IMF’s Board of Executive Directors is limited to the dimensions of data i.e. coverage, periodicity and timeliness, and access i.e. advanced release calendar.

It should also be noted that the SDDS is a disclosure standard, i.e. it focuses on encouraging the authorities to provide information to users, including information that will enable users to assess the data.

The four institutions responsible for the compilation and dissemination of the SDDS prescribed data categories are National Treasury, the South African Revenue Services (SARS), the South African Reserve Bank (SARB) and Statistics South Africa (Stats SA).

National Treasury is responsible for compiling and disseminating data on the national budget (budgetary central government operations). SARS is responsible for compiling and disseminating of data on international merchandise trade.

The SARB is responsible for compiling and disseminating data on national accounts, the analytical accounts of the banking sector, the analytical accounts of the central bank, general government operations, consolidated government operations, central government debt, interest rate, exchange rates, share price indices, balance of payments, the international investment position, international reserves and foreign currency liquidity.

Stats SA is responsible for compiling and disseminating data on the production index, national accounts, the production price index, consumer price index, labour market and population.

South Africa has subscribed to the SDDS since 2 August 1996 and started posting its metadata on 27 September 1996. South Africa met the SDDS specifications for the coverage, periodicity and timeliness of the data, and for the dissemination of advanced release calendars on 18 September 2000.

The National Summary Data Page has been hyperlinked since 24 April 1997 and the Data Template on International Reserves and Foreign Currency Liquidity was disseminated on 1 September 2000.

**Reports on
Observance of
Standards and
Codes (ROSC)
of the
International
Monetary Fund
(IMF)**

The IMF has been working actively on producing Reports on Observance of Standards and Codes (ROSC) as a step to strengthen the architecture of the international financial system. The objectives of the ROSC include the promotion of increased transparency and encouragement of implementation of internationally accepted standards and codes. One of the ROSC components is the data dissemination module, which falls under the responsibility of the IMF's Statistics Department (STA). In this module, a country is assessed according to the SDDS.

The data dissemination module of the ROSC provides a summary of South Africa's practices on the coverage, periodicity and timeliness of the data categories specified in the IMF's SDDS, and on the practices on the provision of advance release calendars for these categories. It is complemented by an assessment of the quality of national accounts statistics, using the Data Quality Assessment Framework (DQAF) developed by the IMF's Statistics Department.

The DQAF undertakes to assess data quality under the following dimensions in

- prerequisites of quality;
- integrity;
- methodological soundness;
- accuracy and reliability;
- serviceability; and
- accessibility.

An IMF delegation visited South Africa from 7 to 18 May 2001 and produced a ROSC for South Africa. This ROSC indicates to which extent South Africa has observed the IMF's requirements and is available at <http://www.imf.org/external/np/rosc/rosc.asp>

Table 1 - Quarterly value added by industry and gross domestic product at constant 2000 prices (R million)

1/ The percentage change is the growth rate from the previous year.

2/ The percentage change is the growth rate for a given quarter compared with the same quarter in the previous year.

Table 2 - Percentage change in the quarterly value added by industry and gross domestic product at constant 2000 prices (concluded)

Year ^{1/}	Quarter ^{2/}	Finance, real estate and business services	General government services	Personal services	Total value added at basic prices	Taxes less subsidies on products	GDP at market prices	Total value added at basic prices excluding agriculture
1994		3,7	1,0	4,9	3,0	5,8	3,2	2,7

Explanatory notes

Introduction

- 1 This Statistical Release contains independent compiled annual estimates of the Gross Domestic Product (GDP) for the period 1994 to 2007. It also contains quarterly estimates of the Gross Domestic Product (GDP) for the period 1999 to the fourth quarter of 2007. The estimates are based on the 1993 System of National Accounts (SNA) published by the United Nations in co-operation with other international organisations. This means that the methodology, concepts and classifications, are in accordance with the latest guidelines of an internationally agreed system of national accounts.

Revised estimates of GDP for the years 1998 onwards in accordance with the new SNA were published in the November 2004 issue of Statistical Release P0441. The revisions also included an update of the base year from 1995 to 2000 for the estimates at constant prices. Thus, the estimates of real GDP are made at 2000 constant prices in this publication.

Methodology

- 2 Annual GDP estimates are now calculated independently from the quarterly estimates. Previously, annual GDP estimates were derived as the sum of the GDP for the four quarters of the relevant year.

Short-term indicators are used to estimate the quarterly GDP (cf. Statistical sources and methods). However, they are by their nature incomplete in terms of coverage and annual changes of output measured through them are generally not as reliable as in instances where the results of annual surveys are used. Therefore, the quarterly estimates must be adapted to the independent annual estimates when such estimates become available.

Classifications

- 3 The estimates of value added by industry are classified according to the Standard Industrial Classification of all Economic Activities (SIC), fifth edition. SIC is based on the third revision of the International Standard Industrial Classification of all Economic Activities (ISIC), with suitable adaptations for South African conditions.

Seasonal adjustment

- 4 The quarterly value added and GDP estimates have been seasonally adjusted. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular quarter. Influences that are volatile or unsystematic can still make it difficult to interpret.

Reliability of estimates **5** Revision of the estimates for all components of the national accounts is usually done every five years in conjunction with the rebasing of the estimates at constant prices. At such a time the results of censuses that have become available in the meantime and any other additional information sources are incorporated in the estimates. Due to the availability of more comprehensive data, revisions are also made of estimates for the latest quarters and, once a year, for the two latest years.

Related publications **6** Users may also wish to refer to the following publications from Stats SA -

- Bulletin of Statistics; and
- SA Statistics
- Annual Financial Statistics

Unpublished Statistics **7** In some cases Stats SA can also make available information which is not published. This information can be made available through a computer printout or diskette. Generally a charge is made for providing unpublished information.

Pre-release policy **8** Stats SA keep new estimates of economic indicators strictly confidential prior to the date and time of release. To enable selected government departments to prepare their public responses, the following pre-release procedure is applied. It accords with practice in leading statistical agencies.

A strict lock-up procedure is put in places that allow media and government officials' access to the data one hour before embargo. There are however strict controls to ensure that the information is not disseminated outside of the lock-up facility before the embargo time.

Classification of industries

The industries used in estimating the value added was classified according to the Standard Industrial Classification of all Economic Activities (SIC), fifth edition. It is based on the third revision of the International Standard Industrial Classification of all Economic Activities (ISIC), with suitable adaptations for local conditions.

For the convenience of users, the SIC is duplicated in this statistical release for easy reference. Two versions of SIC are presented, namely table C reflecting only those categories of the SIC which have actually been used in the national accounts tables in this statistical release and table D which is the full version of SIC (5th edition).

Table C - Categories used in the national accounts

Title in the national accounts tables	Major division of SIC	Division of SIC
Agriculture, forestry and fishing	1	
Agriculture		11
Forestry		12
Fishing		13
Mining and quarrying	2	
Coal mining		21
Gold mining		23
Platinum group metals		24
Other metal ores		24
Other mining and quarrying		22, 25, 29
Manufacturing	3	
Food, beverages and tobacco products		30
Textiles, clothing and leather goods		31
Wood and paper; publishing and printing		32
Petroleum products, chemicals, rubber and plastic		33
Other non-metallic mineral products		34
Metals, metal products, machinery and equipment		35
Electrical machinery and apparatus		36
Radio, TV, instruments, watches and clocks		37
Transport equipment		38
Furniture; other manufacturing		39
Electricity, gas and water	4	
Electricity and gas		41
Water		42
Construction	5	
Wholesale, retail, and motor trade; catering and accommodation	6	
Wholesale trade		61
Retail trade; repair of household goods		62
Motor trade; repair of motor vehicles		63
Catering and accommodation		64
Transport, storage and communication	7	
Transport and storage		71-74
Communication		75
Finance, real estate and business services	8	
Finance and insurance		81-83
Real estate		84
Business services		85-88
Personal services	9 ¹	
General government services	9 ¹	

¹ Major division 9 of SIC - Community, social and personal services - has been disaggregated into two categories in the national accounts tables. These categories follow other criteria than SIC and cannot be defined in terms of the divisions and groups of SIC 9. The first category - Personal services - includes private enterprises. They are market producers. In addition, it includes non-profit institutions serving households (NPISH) and domestic workers. These are also non-market producers. The second category - general government services - comprises the activities of general government in producing non-market community and social services, e.g. public administration, defence, health and education.

Table D - Standard Industrial Classification of All Economic Activities (SIC) - (5th Edition)

Title of category	Major division	Division
Agriculture, hunting, forestry and fishing	1	
Agriculture, hunting and related services		11
Forestry, logging and related services		12
Fishing, operation of fish hatcheries and fish farms		13
Mining and quarrying	2	
Mining of coal and lignite		21
Extraction of crude petroleum and natural gas; service activities incidental to oil and gas extraction, excluding surveying		22
Mining of gold and uranium ore		23
Mining of metal ores, except gold and uranium		24
Other mining and quarrying		25
Services activities incidental to mining of minerals		29
Manufacturing	3	
Manufacture of food products, beverages and tobacco products		30
Manufacture of textiles, clothing and leather goods		31
Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials; manufacture of paper and paper products; publishing, printing and reproduction of recorded media		32
Manufacture of coke, refined petroleum products and nuclear fuel; manufacture of chemicals and chemical products; manufacture of rubber and plastic products		33
Manufacture of other non-metallic mineral products		34
Manufacture of basic metals, fabricated metal products, machinery and equipment and of office, accounting and computing machinery		35
Manufacture of electrical machinery and apparatus n.e.c.		36
Manufacture of radio, television and communication equipment and apparatus and of medical, precision and optical instruments, watches and clocks		37
Manufacture of transport equipment		38
Manufacture of furniture; manufacturing n.e.c.; recycling		39
Electricity, gas and water supply	4	
Electricity, gas, steam and hot water supply		41
Collection, purification and distribution of water		42
Construction	5	
Wholesale and retail trade; repair of motor vehicles, motor cycles and personal and household goods; catering and accommodation	6	
Wholesale and commission trade, except of motor vehicles and motor cycles		61
Retail trade, except of motor vehicles and motor cycles; repair of personal household goods		62
Sale, maintenance and repair of motor vehicles and motor cycles; retail trade in automotive fuel		63
Catering and accommodation		64
Transport, storage and communication	7	
Land transport; transport via pipelines		71
Water transport		72
Air transport		73
Supporting and auxiliary transport activities; activities of travel agencies		74
Post and telecommunications		75

Table D - Standard Industrial Classification of All Economic Activities (SIC) - (5th Edition) (concluded)

Title of category	Major division	Division
Financial intermediation, insurance, real estate and business services	8	
Financial intermediation, except insurance and pension funding		81
Insurance and pension funding, except compulsory social security		82
Activities auxiliary to financial intermediation		83
Real estate activities		84
Renting of machinery and equipment, without operator, and of personal and household goods		85
Computer and related activities		86
Research and development		87
Other business activities		88
Community, social and personal services	9	
Public administration and defence activities		91
Education		92
Health and social work		93
Other community, social and personal service activities		94
Activities of membership organisations n.e.c.		95
Recreational, cultural and sporting activities		96
Other service activities		99
Private households, extritorial organisations, representatives of foreign governments and other activities not adequately defined	0	
Private households with employed persons		01
Exterritorial organisations		02
Representatives of foreign governments		03
Other activities not adequately defined		04

Classification of commodities

The supply and use tables allow for the comparison of statistics on a commodity level. The aggregated tables in this publication is based on a commodity classification that is closely linked to the generally expected output of a specific industry, and therefore follows the SIC closely. Table E provides a key between the commodity group and the SIC-code that would generally be the principal producer of the commodity.

Table E – Classification of commodities used in supply and use tables

Commodity group	Division of SIC
Agriculture, forestry and fishing	1
Mining and quarrying	2
Manufacturing	3
Electricity and water	4
Construction	5
Trade, hotels and restaurants	6
Transport, communication	7
Finance, real estate and business services	8
General government services	91
Personal services	9

Statistical sources

Table F summarises the most important statistical sources from which the benchmarked, annual, regional and quarterly estimates of value added and GDP is derived. The estimates are made at both current and constant prices.

Table F: Statistical sources used in estimating benchmark, annual and quarterly value added and GDP

Industry	Nominal estimates	Real estimates
<p>Cross industry</p>	<p>Benchmark/annual Unless stated otherwise, the estimation of benchmark and annual estimates is based on the Economic Activity Survey and periodic Large Sample surveys conducted by Stats SA. The information is evaluated in a series of annual supply and use tables for internal consistency.</p> <p>A mixture between “bottom-up” and “top-down” approaches are used in the compilation of the estimates (cf. methodological notes). “Bottom-up” data sources include the results of large sample surveys and information from large role-players in a sector, i.e. Telkom. “Top-down” sources are distribution keys based on population census results, employment data, administrative data etc.</p> <p>Unless stated otherwise, labour remuneration is extrapolated according to the quarterly survey of employment and earnings conducted by Stats SA. Information from the quarterly financial survey is used where applicable.</p>	<p>Benchmark/annual Unless stated otherwise the constant estimates are derived from the nominal estimates developed in the supply and use framework and double-deflated with suitable price indices. The output and cost structures from the nominal estimates inform the relative weights used to develop the required composite price indicators.</p> <p>Unless stated otherwise, the national deflator for the specific industry is used to derive the real estimates.</p> <p>Various price indices are used to derive estimates at constant prices from the nominal estimates. Extrapolation of estimates is done through short-term indicators where available.</p>
<p>Agriculture, forestry and fishing (SIC 1)</p>	<p>Benchmark/annual The census of commercial agriculture 2002, conducted by Stats SA on behalf of the National Department of Agriculture (NDA) was used.</p> <p>Selected variables are supplied by the NDA on a provincial level to use as distribution keys</p> <p>Quarterly information on the value of crops and related expenditure is sourced from the NDA</p>	<p>Relevant price indices are provide by the NDA on a quarterly basis</p>

Table F: Statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

Industry	Nominal estimates	Real estimates
<p>Mining and quarrying (SIC 2)</p>	<p>Benchmark/annual Supplemented by gold mining industry information from the Chamber of mines and information from the Department of Minerals and Energy (DME). Regional Information for distribution keys sourced from DME and Chamber of mines Quarterly Monthly data on production and sales for the various sectors of the mining industry as published by Stats SA. Estimates of the gold mining industry is supplemented with information from the Chamber of mines</p>	<p>Quarterly Monthly data on production and sales for the various sectors of the mining industry as published by Stats SA. Estimates of the gold mining industry is supplemented with information from the Chamber of mines</p>
<p>Manufacturing (SIC 3)</p>	<p>Benchmark/annual Manufacturing 2001 Large Sample Survey data published by Stats SA. Regional Similar to the data sources for annual estimates Quarterly Monthly statistics on production and sales for the various sectors of the manufacturing industry as published by Stats SA.</p>	<p>Quarterly Monthly statistics on production and sales for the various sectors of the manufacturing industry as published by Stats SA</p>
<p>Electricity, gas and water (SIC 4)</p>	<p>Benchmark/annual Estimates are supplemented by annual reports from ESKOM, a number of water boards and local government statistics Regional Information used as distribution keys is provided by ESKOM and local authorities Quarterly Real estimates are inflated with relevant producer price indices</p>	<p>Quarterly Monthly statistics regarding generation and consumption of electricity published by Stats SA.</p>
<p>Construction (SIC 5)</p>	<p>Benchmark/annual Benchmark year estimates are extrapolated according to the trend in gross domestic fixed investment of residential and non-residential buildings and construction works as compiled by the SARB</p>	

Table F: Statistical sources used in estimating benchmark, annual and quarterly value added and GDP (continued)

Industry	Nominal estimates	Real estimates
<p>Construction (SIC 5) (continued)</p>	<p>Regional Distribution keys are developed from building statistics published by Stats SA as well as information obtained on the sale of building materials, i.e. cement</p> <p>Quarterly Information based on the trend in gross domestic fixed investment of residential and non-residential buildings and construction works as compiled by the SARB</p>	<p>Quarterly</p> <p>Monthly statistics regarding building plans passed and approved as published by Stats SA.</p>
<p>Wholesale-, retail-, motor trade and accommodation (SIC 6)</p>	<p>Benchmark/annual</p> <p>Unpublished Large Sample Survey on wholesale, retail and motor trade for 2002 conducted by Stats SA</p> <p>Regional</p> <p>Similar to the data sources used for the annual estimates.</p> <p>Quarterly</p> <p>Monthly trade sales statistics covering wholesale, retail & motor trade published by Stats SA.</p>	
<p>Transport, storage and communication (SIC 7)</p>	<p>Benchmark/annual</p> <p>Financial statements of major role players such as Transnet, Telkom and South African Post Office Studies by research institutions on relevant sub-industries e.g. the taxi industry Unpublished Large Sample Surveys on transport and communication for 2002 conducted by Stats SA.</p> <p>Regional</p> <p>Similar to the data sources for annual estimates</p> <p>Quarterly</p> <p>Real estimates are inflated with relevant producer price indices and implied indices</p>	<p>Quarterly</p> <p>Monthly volume indicators information collected from the major role players in each sub industry as collected by Stats SA</p>

Table F: Statistical sources used in estimating benchmark, annual and quarterly value added and GDP (concluded)

Industry	Nominal estimates	Real estimates
<p>Financial intermediation, real estate and business services (SIC 8)</p>	<p>Benchmark/annual</p> <p>Statistics from the 2001 population census and the annual General Household surveys are used in conjunction with information and estimates from SARB</p> <p>Regional</p> <p>Similar to the data sources for annual estimate</p> <p>Quarterly</p> <p>Information and estimates from SARB, as well as trends in related aggregates such as private consumption expenditure</p>	<p>Benchmark/annual</p> <p>Information and estimates from SARB</p> <p>Quarterly</p> <p>Information and estimates from SARB, as well as trends in related aggregates such as private consumption expenditure</p>
<p>General government (SIC 91)</p>	<p>Annual</p> <p>Stat SA conducts a number of surveys on the three tiers of government that is used to derive the estimates. It is supplemented with information from SARB.</p> <p>Regional</p> <p>Similar to the data sources for annual estimate</p> <p>Quarterly</p> <p>Real estimates are inflated with relevant implied indices</p>	<p>Quarterly</p> <p>Quarterly information from the survey of employment and earnings conducted by Stats SA.</p>
<p>Personal services (SIC 9, excl 91)</p>	<p>Benchmark/annual</p> <p>Regional</p> <p>Information of distribution keys is sourced from the 2001 population census and the General Household Survey</p> <p>Quarterly</p> <p>Estimates are extrapolated using relevant items of the private consumption expenditure as estimated by SARB</p>	<p>Quarterly</p> <p>Employment estimates in the domestic services industry.</p>

Glossary

Ancillary activity	An ancillary activity is a supporting activity undertaken to create the conditions within which the activities of an enterprise are carried out.
Annualised percentage change	The annualised percentage change is the growth rate of a given quarter compared with the previous quarter, compounded to an annual rate.
Balancing items	A balancing item is an accounting construct obtained by subtracting the total value of the entries on one side of an account from the total value of the entries on the other side. Balancing items are not simply devices introduced to ensure that accounts balance. They encapsulate a great deal of information and include some of the most important entries in the accounts, for example value added and operating surplus.
Basic prices	The basic price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any tax payable plus any subsidy receivable on that unit as a consequence of its production or sale. Basic prices exclude any transport charges invoiced separately by the producer. Basic prices is the preferred method of valuing output.
Benchmark years	Benchmark years refer to those years in respect of which authoritative and detailed data are available.
Commodity flow method	The commodity flow method is used to track the flow of goods and services from the supply (domestic production or imported) to the use (intermediate consumption, final consumption or exports) thereof.
Compensation of employees	Compensation of employees is defined as the total remuneration, in cash or in kind, payable by an employer to an employee in return for work done by the latter during the accounting period. It is recorded on a gross basis, before any deduction for income taxes, pensions, unemployment insurance and other social insurance schemes. It also includes other forms of compensation, namely commissions, tips, bonuses, directors' fees and allowances such as these for holidays and sick leave, as well as military pay and allowances. It excludes employers' social contributions.
Constant prices	Constant price is a valuation concept expressed at the prices prevailing during a fixed reference period or base period. Currently, the base period for national accounts estimates at constant prices is 2000, which means that they have been restated at 2000 prices.
Current prices	A valuation at current prices is expressed at the prices prevailing during the period being referred to.
Cost, insurance and freight price	The cost, insurance and freight price (c.i.f.) is the price of a good delivered at the frontier of the importing country, or the price of a service delivered to a resident, before payment of any import duties or other taxes on imports or trade and transport margins within the country.
Enterprise	An enterprise may be a corporation (a quasi-corporate enterprise is treated as if it is a corporation in the SNA), a non-profit institution or an unincorporated enterprise. Corporate enterprises and non-profit institutions are complete institutional units. An unincorporated enterprise, however, refers to an institutional unit - a household or government unit - only in its capacity as a producer of goods and services. It covers only those activities of the unit which are directed towards the production of goods and services.

Establishment	An establishment is defined as an enterprise, or part of an enterprise, that is situated at a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.
Factor cost	Factor cost is a valuation reflecting the cost of the factors of production (labour and capital). It corresponds to the value remaining after all applicable taxes and subsidies have been deducted from market prices.
Final demand	Different components of final demand are distinguished in the SU-tables. The supply table shows imports and the use table shows final consumption expenditure by households and the general government as well as gross capital formation (gross fixed capital formation and changes in inventories) and exports.
Financial services indirectly measured	Financial services indirectly measured (FSIM) is measured in the SNA as the total property income receivable by financial intermediaries minus their total interest payable, excluding the value of any property income receivable from the investment of their own funds. Therefore, income does not arise from financial intermediation.
Free on board price	The free on board price (f.o.b.) is the purchaser's price paid by an importer taking delivery of goods at the exporter's frontier after loading on to a carrier and after payment of any export taxes or the receipt of any tax rebates.
GDP at market prices	GDP at market prices equals total gross value added by all industries at basic prices plus taxes on products minus subsidies on products.
GDP for the economy	GDP for the entire economy is equal to GDP at market prices. It is essentially a production measure as it is obtained through the sum of the gross values added of all resident institutional units, in their capacity as producers, <i>plus</i> the values of any taxes, <i>less</i> subsidies, on production or imports not already included in the values of the outputs and values added by resident producers.
GDP per region (GDPR)	GDPR at market prices equals the sum of gross value added by all industries at basic prices plus taxes on products minus subsidies on products in a region.
Generation of income account	The generation of income account provides for the distribution of primary incomes to the various institutional sectors. Primary incomes are incomes that accrue to institutional sectors and industries as a consequence of their involvement in processes of production or ownership of assets that may be needed for purposes of production.
Goods and services account	The goods and services account shows the total resources (output and imports) and uses of goods and services (intermediate consumption, final consumption, gross capital formation and exports). Taxes on products (less subsidies) are also included on the resource side of the accounts.
Gross operating surplus/Mixed income	Gross operating surplus or mixed income is the balancing item in the generation of income account, i.e. the value added <i>minus</i> compensation of employees payable <i>minus</i> taxes on production payable <i>plus</i> subsidies receivable.
Gross value added at basic prices	Gross value added at basic prices is defined as output valued at basic prices less intermediate consumption valued at purchasers' prices.
Gross value added at producer's prices	Gross value added at producers' prices is defined as output valued at producers' prices less intermediate consumption valued at purchasers' prices.

Homogeneous production	A unit of homogeneous production is defined as a producer unit in which only a single (non-ancillary) productive activity is carried out.
Implied deflator	Implied deflators are also known as variable-weighted or “Paasche” indices (although not strictly of the Paasche type). These price indices are a by-product of the deflation procedure, obtained by dividing a series (e.g. value added) expressed at current prices by the corresponding series at constant prices.
Industries	Industries are defined in the SNA in the same way as in the Standard Industrial Classification (SIC). An industry consists of a group of establishments engaged in the same or similar kinds of activity.
Institutional unit	An institutional unit is an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and in transactions with other entities.
Intermediate consumption	Intermediate consumption consists of the value of the goods and services consumed as inputs by a process of production, excluding fixed assets. Consumption of fixed assets is recorded as consumption of fixed capital.
Net other taxes on production	Other taxes on production minus other subsidies on production.
Operating surplus or mixed income	Operating surplus or mixed income is the balancing item in the generation of income account i.e. the value added minus compensation of employees payable minus taxes on production payable plus subsidies receivable.
Other subsidies on production	Subsidies are transfers from the government to the business sector toward current cost of production. These transfers represent additions to the income of producers from current production.
Other taxes on production	Other taxes on production consist of taxes on the ownership of land, buildings or other assets used in production or on labour employed, etc. Important examples of other taxes on production are taxes on payroll or work force, stamp duties, business or professional licenses, etc.
Output	Output is defined in the context of a production account. Production accounts are compiled for establishments or enterprises, and not for processes of production. Therefore, output consists only of those goods or services that are produced within an establishment that become available for use outside that establishment.
Percentage change	When using annual data, the percentage change is the growth rate from one year to the next year. For quarterly data, the percentage change is the growth rate of a given quarter compared with the same quarter in the previous year.
Primary industries	The primary industries include the agriculture, forestry and fishing, mining and quarrying industries.
Principal activity	The principal activity of an establishment is the activity whose gross value added exceeds that of any other activity carried out within the same unit.
Producers’ price	The producer’s price is the amount receivable by the producer from the purchaser for a unit of a good or service produced as output minus any VAT, or similar deductible tax, invoiced to the purchaser. It excludes any transport charges invoiced separately by the producer.

Production boundary	The general production boundary is defined as an economic activity (or production) carried out under the control and responsibility of an institutional unit that uses inputs of labour, capital, and goods and services to produce output of goods and services. The production boundary in the 1993 SNA is more restricted than the general production boundary due to the production accounts not being compiled for household activities that produce domestic or personal services for own final consumption within the same household, except for services produced by paid domestic staff.
Production account for the total economy	The production account is the first in the sequence of accounts compiled for institutional sectors, industries and the total economy. The production account contains three items apart from the balancing item namely output, intermediate consumption and taxes less subsidies on products. The output is recorded under resources on the right-hand side of the account. Intermediate consumption and taxes less subsidies on products is recorded under uses on the left-hand side of the account.
Purchaser's price	The purchaser's price is the amount paid by the purchaser, excluding any deductible value added tax (VAT) or similar deductible tax, in order to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.
Region	A region for GDP estimates per region is defined as a province.
Revision of estimates	Revision of the estimates for all components of the national accounts are usually done every five years in conjunction with the rebasing of the estimates at constant prices apart from the revision of estimates for the latest quarters. At such a time the results of censuses that have become available in the meantime and any other additional information sources are incorporated in the estimates.
Secondary activity	A secondary activity is an activity carried out within a single establishment in addition to the principal activity.
Secondary industries	The secondary industries include the manufacturing, electricity, water and construction industries.
Subsidies	Subsidies are transfers from the government to the business sector toward current cost of production. These transfers represent additions to the income of producers from current production.
Subsidies on products	Subsidies on products are payable per unit of a good or service.
Supply and use tables	The SU-tables are sometimes referred to as rectangular input-output tables, make and use tables, supply and disposition of commodities tables.
Supply table	The supply table gives information about the resources of goods and services.
Symmetric	Symmetric tables use similar classifications or units, i.e. same groups of products for both the rows and the columns.
System of National Accounts	System of National Accounts (SNA), refers to an internationally-agreed standard system for macro-economic accounts. The latest version is described in the System of National Accounts 1993.
Taxes on production and imports	Taxes on production and imports are taxes which add to the cost of production which and are likely to be reflected in market prices paid by the purchaser, such as sales and excise taxes, import duties and property taxes. Taxes on production and imports include taxes on products and other taxes on production.

Taxes on products	Taxes on products consist of taxes payable on goods and services when they are produced, delivered, sold or otherwise disposed of by their producers. Furthermore, they are payable per unit of a good or service produced. Important examples of taxes on products are excise and import duties and value added tax (VAT).
Use Table	The use table gives information on the uses of goods and services, and also on cost structures of the industries.
Value added components	The use table distinguishes three different components of value added, i.e. compensation of employees, other taxes less subsidies on production and gross operating surplus/mixed income.
Tertiary industries	Tertiary industries include wholesale-, retail- and motor trade; catering and accommodation, transport, storage and communication, finance, real estate and business services, community, social and personal services, general government services, and other producers.
Value added by industry	Value added measures the value created by production and may be calculated either before or after deducting the consumption of fixed capital on the fixed assets used. Gross value added is defined as the value of output less the value of intermediate consumption. Value added is the balancing item in the production account for an institutional unit or sector, or establishment or industry.

Additional Information

STAT SA publishes approximately 400 different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since international economic and social-scientific communities use the releases extensively, not only locally but also, Stats SA releases are published in English only.

Stats SA have copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
National Society Library, Pietermaritzburg
Library of Parliament, Cape Town
South African Library, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Pietersburg
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

STAT SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8095.

You can visit us on the Internet at: www.statssa.gov.za

Enquires

Telephone number: (012) 310 8600/8390/8351/4892/8496/8095 (for user information)
(012) 310 8024/520 (technical enquiries)
(012) 310 8161 (publishing)

Fax number: (012) 310 8304
