SUMMARY OF FINDINGS: MINING PRODUCTION AND MINERAL SALES

Key findings regarding mining production as at the end of February 2008

Mining production decreases

The total mining production for the three months ended February 2008, after seasonal adjustment, decreased by 5,2% compared with the previous three months. This decrease of 5,2% was due to a decrease of 11,1% in the production of gold and a decrease of 4,1% in the production of non-gold minerals. The major contributors to the decrease of 5,2% were the production of platinum group metals (PGMs) (-2,3 percentage points), gold (-1,5 percentage points) and diamonds (-1,5 percentage points) (see Table 4).

Furthermore, the total mining production for the three months ended February 2008 decreased by 6,4% compared with the three months ended February 2007. The actual total mining production for February 2008 decreased by 7,3% compared with February 2007 (see Table A).

Gold production decreased by 28,2% for the period February 2008 compared with February 2007. Furthermore, gold production after seasonal adjustment decreased by 7,7% for February 2008 when compared with January 2008 (see Table A).

Key figures regarding mining production as at the end of February 2008

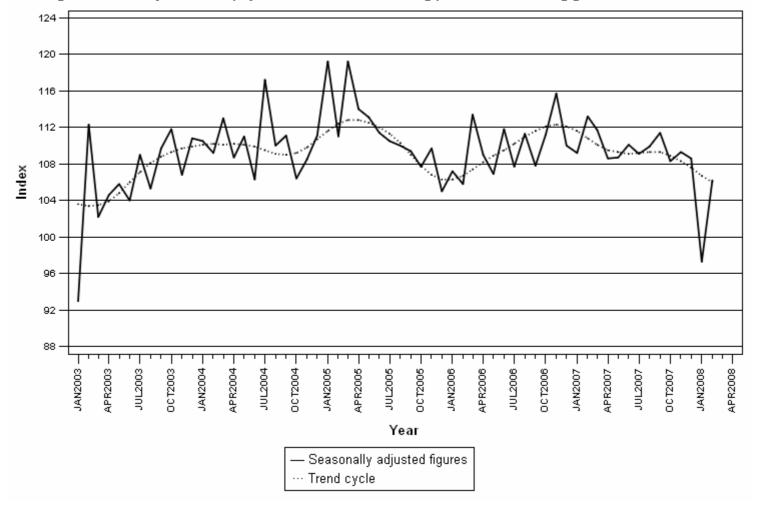

Table A – Selected key figures regarding mining production for February 2008

	Base : 2000=100						
Annual estimates	February 2008	% change between February 2007 and February 2008	% change between December 2006 to February 2007 and December 2007 to February 2008				
Index of the physical volume of mining production							
Gold	44,8	-28,2	-16,7				
Non-gold	107,7	-3,2	-4,6				
Total	91,5	-7,3	-6,4				

	Base : 2000=100						
Shorter term seasonally adjusted estimates	February 2008	% change between January 2008 and February 2008	% change between September 2007 to November 2007 and December 2007 to February 2008				
Index of the physical volume of mining production							
Gold	46,7	-7,7	-11,1				
Non-gold	126,8	11,7	-4,1				
Total	106,2	9,1	-5,2				

Figure 1 shows the seasonally adjusted figures and trend series for the index of mining production between January 2003 and February 2008. The trend series rose from the beginning of 2003 until February 2004, but levelled off until November of the same year. The trend reached a peak in April 2005 and a trough in January 2006. From February 2006 the trend increased until November 2006 but started to decline thereafter.

Figure 1 – Monthly indices of physical volume of total mining production including gold

Key findings regarding mineral sales as at the end of January 2008

Mineral sales increase

The total seasonally adjusted value of mineral sales at current prices for the three months ended January 2008 reflected an increase of 11,9% compared with the previous three months. This increase of 11,9% (R6 401,8 million) can be attributed to an increase of 14,5% (R6 449,5 million) in the sale of non-gold minerals (see Table B and Table 16).

The actual total value of mineral sales at current prices for the three months ended January 2008 increased by 13,5% compared with the three months ended January 2007. The major contributors to the increase of 13,5%, year on year, in the actual value of mineral sales were PGMs (5,5 percentage points or R2 932,0 million), coal (3,0 percentage points or R1 591,9 million), manganese ore (2,0 percentage points or R1 003,4 million) and iron ore (1,8 percentage points or R935,6 million) (see Table 8).

Key figures regarding mineral sales as at the end of January 2008

Table B – Selected key figures regarding mineral sales for January 2008

	January 2008	% change between	% change between	
Annual estimates	R million	January 2007 and January 2008	November 2006 to January 2007 and November 2007 to January 2008	
Mineral sales				
Gold	2 918,8	-1,3	-0,3	
Non-gold	15 485,5	14,6	16,4	
Total	18 404,3	11,7	13,5	

	January 2008	% change between	% change between
Shorter term seasonally adjusted estimates	R million	December 2007 and January 2008	August 2007 to October 2007 and November 2007 to January 2008
Mineral sales			
Gold	3 144,6	16,1	-0,5
Non-gold	17 061,6	-2,0	14,5
Total	20 206,2	0,5	11,9

Figure 2 shows the seasonally adjusted figures and trend series of the total value of mineral sales between January 2003 and January 2008. There was a clear upward trend during 2004–2006, but during 2007 the trend fluctuated. During the last two months the highest seasonally adjusted mineral sales were recorded and the trend breached the R20 billion level.

Figure 2 - Total value of mineral sales including gold

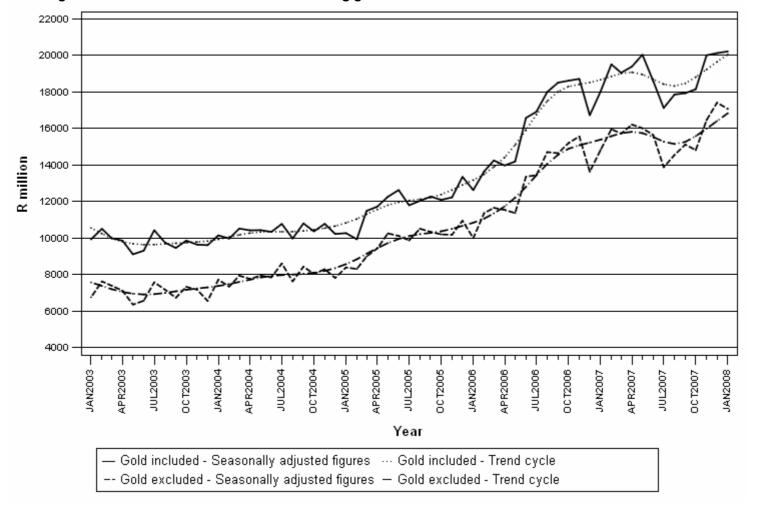

Figure 3 – Comparison of the last six years for the total value of mineral sales, including gold, for the three months ended January compared with the three months ended January of the previous year.

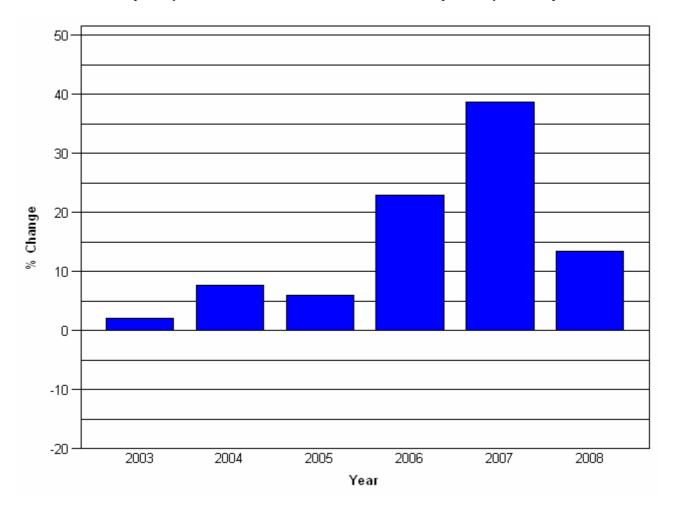

Figure 3 shows the 13,5% annual growth rate in the value of mineral sales for the three months ended January 2008. From 2003 the percentage change grew quite significantly with a peak growth rate during the three months ended January 2007 (38,7%).

Statistics South Africa 14 P2041

Explanatory notes

Introduction

1

Statistics South Africa (Stats SA) publishes monthly information regarding the mining industry on the basis of mining production figures and mineral sales furnished by the Minerals Bureau, Department of Minerals and Energy. This statistical release contains detailed information regarding indices of the physical volume of mining production and the total value of mineral sales according to mining divisions and mineral groups on a monthly basis.

- In accordance with international practice, the indices have to be re-based every five years to a new base year. The base year of the index of the physical volume of mining production is currently 2000=100. Both actual and seasonally adjusted figures are presented.
- 3 Due to mining production figures being available earlier than mineral sales figures, mining production indices are published one month earlier than mineral sales.
- The value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.
- In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in future statistical release(s) as soon as more up-to-date information is available.

Purpose of the 6 survey

The monthly mining production and sales survey is conducted by the Minerals Bureau, covering all mining establishments operating in the South African economy. The results of this survey are used to calculate physical volume of mining production indices in order to estimate the gross domestic product (GDP) and its components, which in turn are used to develop and monitor government policy.

Scope of the 7 survey

This survey covers mining establishments conducting activities regarding

• The extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.

Classification 8

The 1993 edition of the *Standard Industrial Classification of all Economic Activities* (*SIC*), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 *International Standard Industrial Classification of all Economic Activities* (*ISIC*) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division, major group and subgroup level. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment.

Statistical unit 9

The basic statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 8).

Weighting 10

The weights which are used to aggregate minerals to mineral groups and mineral groups to total mining are based on the value of production derived from detailed information for 2000 supplied by the Minerals Bureau, Department of Minerals and Energy.

Statistics South Africa 15 P2041

Seasonal adjustment

11

Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month.

Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

Reliability of 12 estimates

Estimates are subject to sampling and non-sampling errors. Figures for the latest month are preliminary.

Historical data 13

More comprehensive detail on the method of calculation and historical data in respect of the production indices according to mining mineral groups for the period February 1990 to November 2002 is available in statistical release P2041.1, entitled *Mining statistics: Indices of the physical volume of mining production, Base: 2000=100, February 1990 to November 2002*, published on 11 February 2003 on the Stats SA website: www.statssa.gov.za

Unpublished statistics

15

16

In some cases Stats SA can also make available statistics not included in standard publications. The statistics can be made available via computer printouts or diskette or CD. Generally, a charge is made for providing unpublished statistics.

Rounding-off of figures

The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

Statistics South Africa 16 P2041

Glossary

Free-on-rail Free-on-rail relates to goods sold on the local market where no railage or road

transport costs are involved.

Free-on-board basis Free-on-board relates to goods destined for the export market. Railage, road

transport and docking charges are involved but no charges are made for the

transport by sea.

Index of physical volume of mining production

The index of physical volume of mining production or a production index is a statistical measure of the change in the volume of production. The production index of a mineral group is the ratio between the volume of production of a mineral group in a given period and the volume of production of the same mineral group in the base period. The current base period is 2000. The production in the base

period is set at 100.

Industry An industry consists of a group of establishments engaged in the same or similar

kinds of economic activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the Standard Industrial Classification (SIC)

of all Economic Activities, Fifth Edition of January 1993.

PGMs - Platinum Group

Metals

Sales

Platinum Group Metals include platinum; iridium; osmiridium; palladium; rhodium; ruthenium and osmium.

Sales are the total value of sales and transfers-out of goods mined by the mining

establishments and the amounts received for installation, erection or assembly or

other services rendered.

Weight The weight of a mineral group is the ratio of the sales of a mineral group to the

total sales of the mining industry. The weight of a mineral group reflects the importance of the mineral group in the total mining industry. The weights change over time due to quality changes and changes in relative prices. New weights

need to be calculated from time to time.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages.

Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, diskette, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/8496/4892/8095.
