130,7	-0,5%	+1,1%
115,2	-0,6%	+1,1%

Key findings regarding mining production as at the end of July 2005

Mining production increases

The total mining production for the three months ended July 2005, after seasonal adjustment, increased by 1,1% compared with the previous three months. This increase was due to a seasonal adjusted increase of 1,1% in the production of non-gold minerals and 1,0% in the production gold during the three months ended July 2005 compared with the previous three months. The seasonally adjusted increase of 1,1% in the production of non-gold minerals was mainly due to an increase in the production of PGM's (+1,7 percentage points) and coal (+0,3 of a percentage point) (see table 4).

Figure 1 shows the seasonally adjusted and trend series for the index of mining production between January 2001 and July 2005. The trend series has been rising since September 2004 up to April 2005 and started to decline in May 2005.

Table B – Selected key figures regarding mineral sales for June 2005

Annual estimates	June 2005 R million	% change between June 2004 and June 2005	% change between April 2004 to June 2004 and April 2005 to June 2005
Mineral sales			
Gold	2 797,5	+1,8%	-10,3%
Non-gold minerals	10 464,6	+29,1%	+24,7%
Total	13 262,1	+22,2%	+16,2%

Shorter term seasonally adjusted estimates	June 2005 R million	% change between May 2005 and June 2005	% change between January 2005 to March 2005 and April 2005 to June 2005
Mineral sales			
Gold	2 474,0	+24,1%	+10,4%
Non-gold minerals	10 318,9	+5,2%	+20,5%
Total	12 792,9	+8,4%	+18,5%

Key findings regarding mineral sales as at the end of June 2005

Mineral sales increase

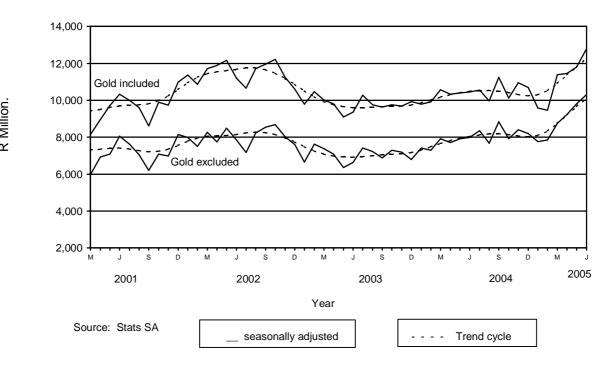

The seasonally adjusted value of mineral sales at current prices for the second quarter of 2005 reflected an increase of 18,5% compared with the first quarter of 2005. Furthermore, the actual value of mineral sales at current prices for the second quarter of 2005 increased by 16,2% compared with the second quarter of 2004.

The increase of 18,5% in the seasonally adjusted value of mineral sales for the second quarter of 2005 compared with the first quarter of 2005 can be attributed to an increase of 20,5% (R4 992,1 million) in sales of non-gold minerals and an increase of 10,4% (R631,9 million) in sales of gold during the same period.

The major contributors to the increase of 16,2% in the actual value of mineral sales at current prices for the second quarter of 2005 compared with the second quarter of 2004 were other non-metallic minerals (+4,9 percentage points or +R1 518,8 million), coal (+4,8 percentage points or +R1 496,3 million), PGM's (+3,3 percentage points or +R1 009,0 million) and iron ore (+2,6 percentage points or +R812,6 million). However, this increase was counteracted by a decrease in the sales of gold (-2,5 percentage points or -R776,5 million) (see table 8).

Figure 2 shows the seasonally adjusted and trend series of mineral sales between January 2001 and June 2005. The trend series has been rising since the beginning of the year.

August 2005 13 October 2005

Purpose of the survey

The monthly mining production and sales survey is a survey conducted by the Minerals Bureau, covering all mining establishments operating in the South African economy. The results of this survey are used to calculate physical volume of mining production indices in order to estimate the gross domestic product (GDP) and its components, which in turn are used to develop and monitor Government policy.

Explanatory notes

Introduction

- Statistics South Africa (Stats SA) publishes monthly information regarding the mining industry on the basis of mining production figures and mineral sales furnished by the Minerals Bureau, Department of Minerals and Energy. This statistical release contains detailed information regarding indices of the physical volume of mining production and the total value of mineral sales according to mining divisions and mineral groups on a monthly basis.
- In accordance with international practice, the indices have to be re-based every five years to a new base year. The base year of the index of the physical volume of mining production is currently 2000=100. Both actual and seasonally adjusted figures are presented.
- 3 Due to mining production figures being available earlier than mineral sales figures, mining production indices are published one month earlier than mineral sales.
- 4 The value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.
- In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in future statistical release(s) as soon as more up-to-date information is available.

Scope of the survey

- 6 This survey covers mining establishments conducting activities regarding -
 - the extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.

Classification

The 1993 edition of the *Standard Industrial Classification of all Economic Activities* (*SIC*), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 *International Standard Industrial Classification of all Economic Activities* (*ISIC*) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division, major group and subgroup level. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment.

Statistical unit

8 The basic statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 7).

Weighting

9 The weights which are used to aggregate minerals to mineral groups and mineral groups to total mining, are based on the value of production derived from detailed information for 2000 supplied by the Minerals Bureau, Department of Minerals and Energy.

Seasonal adjustment

10 Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month.

Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

Reliability of estimates

Estimates are subject to sampling and non-sampling errors. Figures for the latest month are preliminary.

Historical data

More comprehensive detail on the method of calculation and historical data in respect of the production indices according to mining mineral groups for the period February 1990 to November 2002 is available in statistical release P2041.1, entitled *Mining statistics: Indices of the physical volume of mining production, Base:* 2000=100, February 1990 to November 2002, published on 11 February 2003 on the Stats SA website www.statssa.gov.za

12

Unpublished statistics

In some cases Stats SA can also make available statistics not included in standard publications. The statistics can be made available via: computer printouts or diskette or CD. Generally a charge is made for providing unpublished statistics.

Rounding-off of figures

15 The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

Glossary

Free-on-rail Free-on-rail relates to goods sold on the local market where no railage or road transport costs are

involved.

Free-on-board basis Free-on-board relates to goods destined for the export market. Railage, road transport and

docking charges are involved but no charges are made for the transport by sea.

Index of physical volume of mining production

The index of physical volume of mining production or a production index is a statistical measure of the change in the volume of production. The production index of a mineral group is the ratio between the volume of production of a mineral group in a given period and the volume of production of the same mineral group in the base period. The current base period is 2000. The

production in the base period is set at 100.

Industry

An industry consists of a group of establishments engaged in the same or similar kinds of

economic activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the Standard Industrial Classification (SIC) of all Economic Activities, Fifth Edition of

January 1993.

PGM's - Platinum Group

Metals

Platinum Group Metals includes platinum; iridium; osmiridium; palladium; rhodium; ruthenium

and osmium.

Sales Sales are the total value of sales and transfers-out of goods mined by the mining establishments

and the amounts received for installation, erection or assembly or other services rendered.

Weight The weight of a mineral group is the ratio of the sales of a mineral group to the total sales of the

mining industry. The weight of a mineral group reflects the importance of the mineral group in the total mining industry. The weights change over time due to quality changes and changes in

relative prices. New weights need to be calculated from time to time.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available in the Stats SA Library, and in the following public libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.
