Index of the physical volume of mining production			
Gold	81,3	+1,9%	-5,3%
Non-gold minerals	102,1	-0,4%	-1,4%
Total	93,3	+0,4%	-2,9%

Key findings regarding mining production as at June 2000

Mining production decreases

The total mining production for the second quarter of 2000 decreased by 2,9% after seasonal adjustment compared with the first quarter of 2000.

The decrease of 2,9% after seasonal adjustment in the total mining production was due to a decrease of 5,3% in the production of gold (contributing 2,2 percentage points) and a decrease of 1,4% in the production of non-gold minerals (contributing 0,7 of a percentage point) during the second quarter of 2000 compared with the first quarter of 2000.

Table A - Contribution of the production by the different mining divisions to the total mining production (Base 1995=100)

Major divisions and	Percentage	Average	Quarterly	Contribution
---------------------	------------	---------	-----------	--------------

major groups	contribution to the total mining production in the base year 1995 (weights)	seasonally adjusted production index for the three months April 2000 to June 2000	percentage change (April 2000 to June 2000 compared with the preceding three months)	(percentage points) to the seasonally adjusted quarterly percentage change in total mining production 1/
Gold	42,5	81,6	-5,3	-2,2
Non-gold minerals

Key findings regarding mineral sales as at May 2000

Mineral sales increase

The seasonally adjusted value of mineral sales for the three months up to May 2000 reflected an increase of 19,5% compared with the previous three months.

The 19,5% increase in the seasonally adjusted value of mineral sales was due to an increase of 28,7% (R4 239,7 million) in non-gold mineral sales. However, this increase was partially counteracted by a decrease of 1,8% (R116,0 million) in gold sales during the three months up to May 2000 compared with the previous three months.

		-
Purpose of the survey	country-wide sample survive establishments operating results of this survey are umining production indices	ection and sales survey is a bey covering a sample of mining in the South African economy. The sed to calculate physical volume of in order to estimate the gross and its components, which in turn are tor Government policy.

Additional information

Explanatory notes

Introduction	1	Statistics South Africa (Stats SA) publishes monthly information regarding the mining industry covering a sample of mining establishments (branches). This statistical release contains detailed information regarding indices of the physical volume of mining production and the total value of mineral sales according to mining divisions and major groups on a monthly basis.
	2	Data shown in the tables are compiled by Statistics South Africa (Stats SA) on the basis of mining production figures and mineral sales furnished by the Minerals Bureau, Department of Minerals and Energy.
	3	Due to mining production figures being available earlier than mineral sales figures, mining production indices are published one month earlier than minera sales.
	4	The value of mineral sales is calculated, in general, on The

		value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.
	5	In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in future statistical release(s) as soon more up-to-date information is available.
Scope of the survey	6	This survey covers mining establishments conducting activities regarding - the extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.
Classification	7	The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division, major group and subgroup level. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment (branch).
Statistical unit	8	The basic statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (cf. paragraph 7).
Weighting	9	The weights which are used to aggregate minerals to mineral groups and mineral groups to total mining, are based on the value of production derived from detailed information for 1995 supplied by the Minerals Bureau,

Rebasing	10	In accordance with international practice, the indices have to be rebased every five years to a new base year. The indices in this statistical release have been calculated on the basis of 1995=100. The first results on this basis were published in May 1998. Both actual and seasonally adjusted figures are presented.
Seasonal adjustment	11	Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.
Reliability of estimates	2	Estimates are subject to sampling and non-sampling errors. Figures for the latest month are preliminary.
Related publications	13	Users may also wish to refer to the following publications which are available from Stats SA - Bulletin of Statistics. SA Statistics.

Unpublished statistics		In some cases Stats SA can also make available statistics which are not published. The statistics can be made available via: computer printouts or diskette or CD. Generally a charge is made for providing unpublished statistics.
Rounding-off of figures	15	The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

Glossary

Enterprise An enterprise (firm) is a legal entity consisting of one or more establishments (branches). The establishments need not necessarily all be mining establishments, but some may be classifiable as other industries of the economy, such as manufacturing, wholesale trade, retail trade, motor trade and construction.

Establishment An establishment is defined as an enterprise, or part of an enterprise, that is situated at a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.

Free-on-rail Free-on-rail relates to goods sold on the local market where no railage or road transport costs are involved.

Free-on-board Free-on-board relates to goods destined for the export market. Railage, road transport and

basis docking charges are involved but no charges are made for the transport by sea.

Index of physical volume The index of physical volume of mining production or a production index is a statistical

of mining production measure of the change in the volume of production. The production

index of a major group is the ratio between the volume of production of a major group in a given period and the volume of production of the same major group in the base period. The current base period is 1995. The production in the base period is set at 100.

Industry An industry consists of a group of establishments engaged in the same or similar kinds of economic activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the Standard Industrial Classification (SIC) of all Economic Activities, Fifth Edition of January 1993.

Sales Sales are the total value of sales and transfers-out of goods mined by the mining establishments and the amounts received for installation, erection or assembly or other service rendered.

Weight The weight of a major group is the ratio of the production of a major group to the total production of the mining industry. The weight of a major group reflects the importance of the major group in the total mining industry. The weights change over time due to quality changes and changes in relative prices. New weights need to be calculated from time to time.

For more information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on http://www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division

Library of Parliament, Cape Town National Library of South Africa, Cape Town Division Bloemfontein Public Library Natal Society Library, Pietermaritzburg Johannesburg Public Library

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8095.
