SUMMARY OF FINDINGS: MINING PRODUCTION AND MINERAL SALES

Table A – Selected key figures regarding total mining production for March 2010

Actual estimate	Base : 2005=100		
	March 2010	% change between March 2009 and March 2010	% change between January to March 2009 and January to March 2010
Physical volume of mining production index	92,9	11,0	9,0

Seasonally adjusted estimate	Base : 2005=100		
	March 2010	% change between February and March 2010	% change between October to December 2009 and January to March 2010
Physical volume of mining production index	92,9	3,8	4,0

Table B – Three-monthly contribution of the mineral groups and minerals to the total seasonally adjusted mining production

Mineral groups and minerals	Base : 2005=100					
	Weights 2005	October to December 2009	January to March 2010	% change between October to December 2009 and January to March 2010	Difference between October to December 2009 and January to March 2010	Contribution (% points) to the % change in the total mining production 1/
Gold	17,2	65,4	60,2	-8,0	-5,2	-1,0
Iron ore	5,3	151,0	158,7	5,1	7,7	0,5
Chromium ore	1,3	109,8	117,0	6,6	7,2	0,1
Copper	1,8	69,9	82,4	17,9	12,5	0,3
Manganese ore	1,5	121,7	143,6	18,0	21,9	0,4
PGMs	27,0	93,7	93,7	0,0	0,0	0,0
Nickel	2,8	82,1	109,3	33,1	27,2	0,9
Other metallic minerals	2,8	85,0	91,5	7,6	6,5	0,2
Diamonds	7,6	47,0	61,9	31,7	14,9	1,3
Coal	24,9	101,5	104,5	3,0	3,0	0,9
Building materials	2,1	97,1	93,7	-3,3	-3,4	-0,1
Other non-metallic minerals	5,7	55,2	65,8	19,2	10,6	0,7
Total	100,0	87,8	91,3	4,0	3,5	4,0

1/ The contribution (percentage points) of a mineral or mineral group to the percentage change in the total seasonally adjusted mining production is calculated by multiplying the difference in the index for the mineral or mineral group by the weight of the mineral or mineral group and then dividing by the previous period's total index. Figures have been rounded off.

Key findings regarding mining production for March 2010

The index of total mining production was 11,0% higher in March 2010 compared with March 2009. This is the third positive annual growth since December 2009 (see Table 2).

The total mining production for the first quarter of 2010, after seasonal adjustment, increased by 4,0% compared with the fourth quarter of 2009. The main contributors to the 4,0% increase were diamonds (contributing 1,3 percentage points), coal and nickel (each contributing 0,9 of a percentage point) and other non-metallic minerals (contributing 0,7 of a percentage point) (see Table B).

The actual estimated total mining production for the first quarter of 2010 increased by 9,0% compared with the first quarter of 2009 (see Table A).

Figure 1 shows the seasonally adjusted figures and trend series for the index of total mining production between January 2005 and March 2010.

Figure 1 – Monthly indices of physical volume of total mining production (Base: 2005=100)

Table C – Selected key figures regarding the total value of mineral sales for February 2010

Actual estimate	February 2010	% change between February 2009 and February 2010	% change between December 2008 to February 2009 and December 2009 to February 2010	% change between January to February 2009 and January to February 2010
	R million

Seasonally adjusted estimate	February 2010	% change between January and February 2010	% change between September to November 2009 and December 2009 to February 2010
	R million		
Total value of mineral sales	21 205,7	-5,6	12,5

Table D – Contribution of the mineral groups and minerals to the seasonally adjusted three-monthly growth in the total value of mineral sales

Mineral groups and minerals	% contribution to total mineral sales during September to November 2009	September to November 2009	December 2009 to February 2010	% change between September to November 2009 and December 2009 to February 2010	Contribution to the % change in the total value of mineral sales 1/	Difference between September to November 2009 and December 2009 to February 2010
		R million	R million		% points	R million
Gold	21,9	12 529,3	11 025,6	-12,0	-2,6	-1 503,7
Iron ore	9,9	5 674,0	5 822,3	2,6	0,3	148,3
Chromium ore	1,6	893,2	1 219,5	36,5	0,6	326,3
Copper	1,6	940,4	1 228,0	30,6	0,5	287,6
Manganese ore	2,8	1 628,6	2 228,1	36,8	1,0	599,5
PGMs	26,8	15 343,5	17 946,4	17,0	4,6	2 602,9
Nickel	1,7	983,0	1 532,7	55,9	1,0	549,7
Other metallic minerals	2,0	1 123,3	1 590,7	41,6	0,8	467,4
Coal	23,7	13 526,3	15 313,3	13,2	3,1	1 787,0
Building materials	3,1	1 795,2	1 739,8	-3,1	-0,1	-55,4
Other non-metallic minerals	4,7	2 710,4	4 645,0	71,4	3,4	1 934,6
Total	100,0	57 147,2	64 291,4	12,5	12,5	7 144,2

1/ The contribution (percentage points) to the percentage change in sales is calculated by multiplying the percentage change of each mineral with the percentage contribution to total mineral sales during September to November 2009, divided by 100. Figures have been rounded off.

Key findings regarding mineral sales for February 2010

The total seasonally adjusted value of mineral sales at current prices for the three months ended February 2010 reflected an increase of 12,5% compared with the previous three months. The increase of 12,5% (R7 144,2 million) was mainly due to increases in the sales value of PGMs (contributing 4,6 percentage points or R2 602,9 million), other non-metallic minerals (contributing 3,4 percentage points or R1 934,6 million) and coal (contributing 3,1 percentage points or R1 787,0 million) (see Table D).

The actual estimated total value of mineral sales at current prices for the three months ended February 2010 increased by 6,3% compared with the three months ended February 2009. The major contributors to this increase were PGMs (contributing 7,5 percentage points or R4 193,5 million), other non-metallic minerals (contributing 2,4 percentage points or R1 327,9 million) and nickel (contributing 1,5 percentage points or R800,1 million) (see Table 12).

Figure 2 shows the seasonally adjusted figures and trend series of the total value of mineral sales between January 2005 and February 2010.

1/ The contribution (percentage points) of a mineral or mineral group to the percentage change in the total mining production is calculated by multiplying the difference in the index for the mineral or mineral group by the weight of the mineral or mineral group and then dividing by the previous period's total index. Figures have been rounded off.

PGMs	21,2	7 580,5	10 097,9	33,2	7,0	2 517,4
Nickel	1,2	437,6	944,4	115,8	1,4	506,8
Other metallic minerals	1,6	567,5	939,1	65,5	1,0	371,6
Coal	27,7	9 874,0	9 871,3	0,0	0,0	-2,7
Building materials	2,8	994,6	1 036,4	4,2	0,1	41,8
Other non-metallic minerals	4,9	1 765,3	2 702,3	53,1	2,6	937,0
Total	100,0	35 699,5	38 634,0	8,2	8,2	2 934,5

2/ The contribution (percentage points) to the percentage change in sales is calculated by multiplying the percentage change of each mineral with the percentage contribution to total mineral sales during January to February 2009, divided by 100. Figures have been rounded off.

Explanatory notes

Introduction	1	<p>Statistics South Africa (Stats SA) publishes monthly information regarding the mining industry on the basis of mining production figures and mineral sales furnished by the Department of Mineral Resources (DMR). This statistical release contains detailed information regarding indices of the physical volume of mining production and the total value of mineral sales according to mining mineral groups and minerals on a monthly basis.</p>
	2	<p>In accordance with international practice, the indices have to be re-based every five years to a new base year. The base year of the index of the physical volume of mining production is currently 2005=100. Both actual and seasonally adjusted figures are presented.</p>
	3	<p>Due to mining production figures being available earlier than mineral sales figures, mining production indices are published one month earlier than mineral sales.</p>
	4	<p>The value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.</p>
	5	<p>In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in future statistical release(s) as soon as more up-to-date information is available.</p>
Purpose of the survey	6	<p>The monthly mining production and sales survey is conducted by the Department of Mineral Resources (DMR), covering all mining establishments operating in the South African economy. The results of this survey are used to calculate physical volume of mining production indices in order to estimate the gross domestic product (GDP) and its components, which in turn are used to develop and monitor government policy.</p>
Scope of the survey	7	<p>This survey covers mining establishments conducting activities regarding</p> <ul style="list-style-type: none"> • The extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.
Classification	8	<p>The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i>, Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment. Statistics in this publication are presented according to mineral groups and minerals.</p>
Statistical unit	9	<p>The basic statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 8).</p>
Weighting	10	<p>The weights, which are used to aggregate minerals to mineral groups and mineral groups to total mining, are based on the value of production derived from detailed information for 2005 supplied by the Department of Mineral Resources (DMR).</p>

Seasonal adjustment	11	<p>Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month.</p> <p>Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.</p>																
Reliability of estimates	12	<p>Figures for the latest 12 months are preliminary.</p>																
Historical data	13	<p>More comprehensive detail on the method of calculation and historical data in respect of the production indices according to mining mineral groups for the period January 1998 to September 2009 is available in the statistical release P2041, entitled <i>Mining: Production and sales (Preliminary)</i>, published on 12 November 2009 and is available on the Stats SA website: www.statssa.gov.za</p>																
Related publications	14	<p>Users may also wish to refer to the following publications which are available from Stats SA -</p> <ul style="list-style-type: none"> • <i>Bulletin of Statistics.</i> • <i>SA Statistics.</i> 																
Rounding-off of figures	15	<p>Where necessary, the figures in the tables have been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.</p>

Glossary

Free-on-rail	Free-on-rail relates to goods sold on the local market where no railage or road transport costs are involved.
Free-on-board	Free-on-board relates to goods destined for the export market. Railage, road transport and docking charges are involved but no charges are made for the transport by sea.
Index of physical volume of mining production	The index of physical volume of mining production or a production index is a statistical measure of the change in the volume of production. The production index of a mineral group is the ratio between the volume of production of a mineral group in a given period and the volume of production of the same mineral group in the base period. The current base period is 2005. The production in the base period is set at 100.
Industry	An industry consists of a group of establishments engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts (SNA)</i> in the same way as in the <i>Standard Industrial Classification (SIC) of all Economic Activities</i> , Fifth Edition of January 1993.
PGMs - Platinum group metals	Platinum group metals include platinum; iridium; osmiridium; palladium; rhodium; ruthenium and osmium.
Sales	Sales are the total value of sales and transfers-out of goods mined by the mining establishments and the amounts received for installation, erection or assembly or other services rendered.
Weight	The weight of a mineral group is the ratio of the sales of a mineral group to the total sales of the mining industry. The weight of a mineral group reflects the importance of the mineral group in the total mining industry. The weights change over time due to quality changes and changes in relative prices. New weights need to be calculated from time to time. The current weights that are being used are based on the total value of mineral sales for 2005.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/8496/4892/8095.
