SUMMARY OF FINDINGS: MINING PRODUCTION AND MINERAL SALES

Key findings regarding mining production for November 2008

Seasonally adjusted mining production increases

The total mining production for the three months ended November 2008, after seasonal adjustment, increased by 6,1% compared with the previous three months. The main contributor to the 6,1% increase was PGMs (9,0 percentage points) (see Table 4).

The total mining production for the three months ended November 2008 decreased by 2,2% compared with the three months ended November 2007. The actual total mining production for November 2008 decreased by 6,1% compared with November 2007, which is largely attributable to negative contributions from diamonds (-2,8 percentage points), coal (-1,2 percentage points) and gold (-1,1 percentage points).

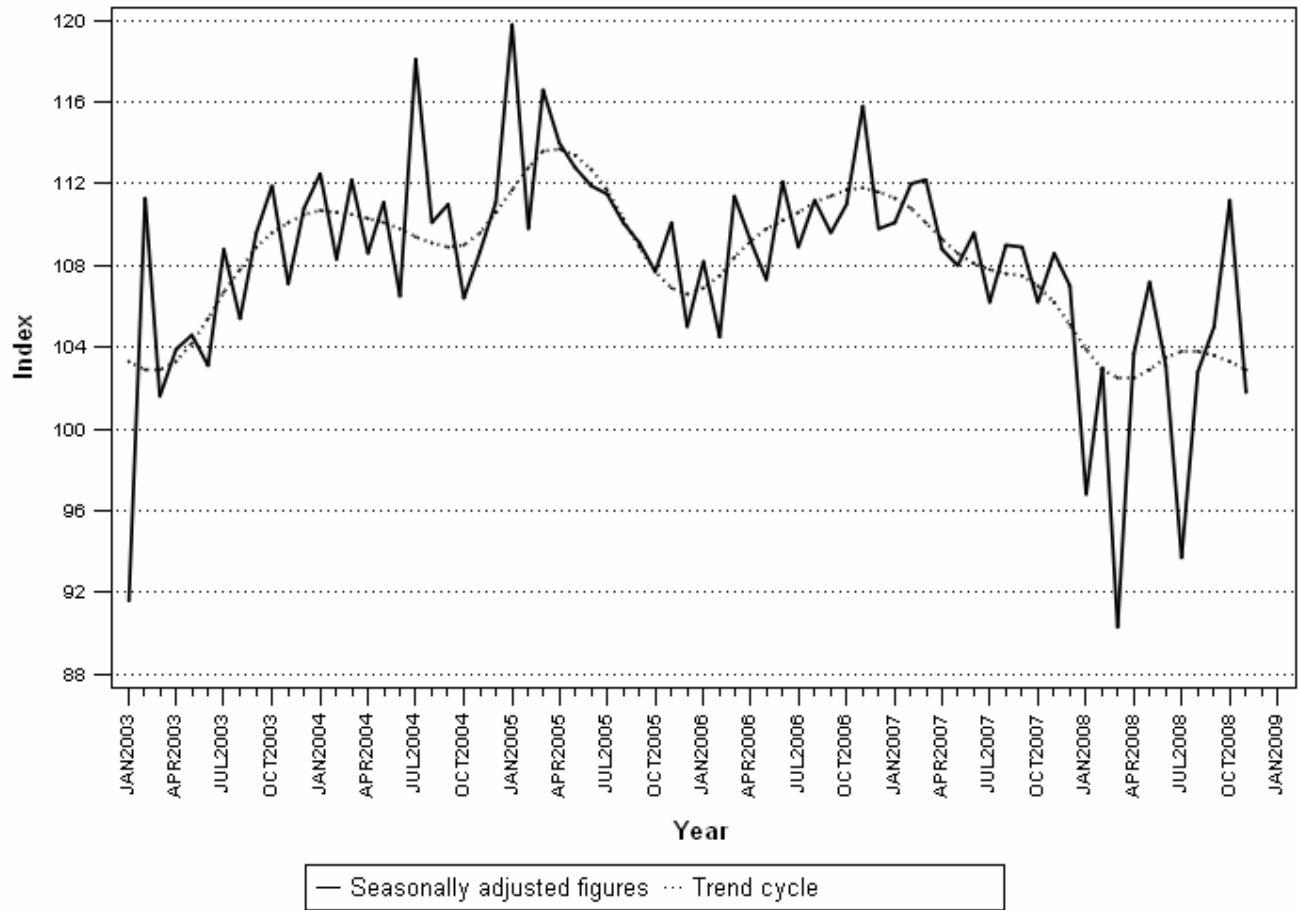

Table A – Selected key figures regarding mining production for November 2008

Actual estimates	Base : 2000=100		
	November 2008	% change between November 2007 and November 2008	% change between September to November 2007 and September to November 2008
Index of the physical volume of mining production			
Gold	50,4	-8,7	-12,6
Non-gold	122,3	-5,7	-0,5
Total	103,8	-6,1	-2,2

Shorter term seasonally adjusted estimates	Base : 2000=100		
	November 2008	% change between October and November 2008	% change between June to August and September to November 2008
Index of the physical volume of mining production			
Gold	49,6	0,4	0,8
Non-gold	119,9	-9,6	7,0
Total	101,8	-8,5	6,1

Figure 1 shows the seasonally adjusted figures and trend series for the index of total mining production between January 2003 and November 2008.

Figure 1 – Monthly indices of physical volume of total mining production (Base: 2000=100)

Key findings regarding mineral sales for October 2008

Seasonally adjusted mineral sales increase slightly

The total seasonally adjusted value of mineral sales at current prices for the three months ended October 2008 reflected an increase of 0,7% compared with the previous three months. This increase of 0,7% (R534,2 million) can be largely attributed to an increase of 1,2% (R799,9 million) in non-gold mineral sales (see Table B and Table 16).

The actual estimated total value of mineral sales at current prices for the three months ended October 2008 increased by 43,5% compared with the three months ended October 2007. The major contributors to this increase of 43,5%, year-on-year, were coal (16,6 percentage points or R9 370,4 million), manganese ore (8,8 percentage points or R5 109,1 million) and PGMs (6,6 percentage points or R3 727,8 million) (see Table 8).

Table B – Selected key figures regarding mineral sales for October 2008

Actual estimates	October 2008	% change between October 2007 and October 2008	% change between August to October 2007 and August to October 2008
	R million		
Mineral sales			
Gold	4 470,4	33,0	17,8
Non-gold	21 720,3	41,5	48,8
Total	26 190,7	40,0	43,5

Shorter term seasonally adjusted estimates	October 2008	% change between September and October 2008	% change between May to July and August to October 2008
	R million		
Mineral sales			
Gold	4 287,6	19,8	-2,3
Non-gold	22 764,1	1,9	1,2
Total	27 051,7	4,4	0,7

Figure 2 shows the seasonally adjusted figures and trend series of the total value of mineral sales between January 2003 and October 2008.

Figure 2 – Total value of mineral sales

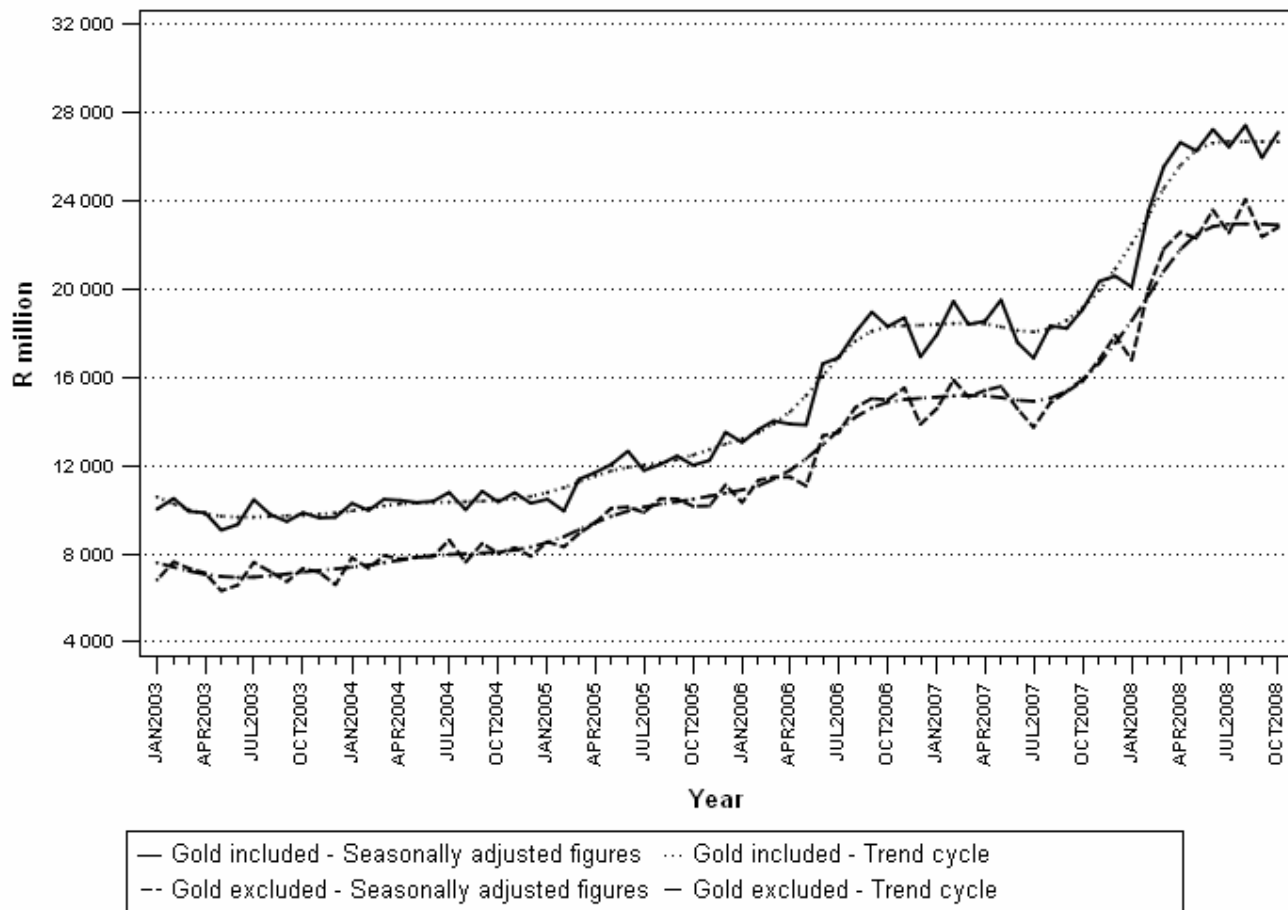

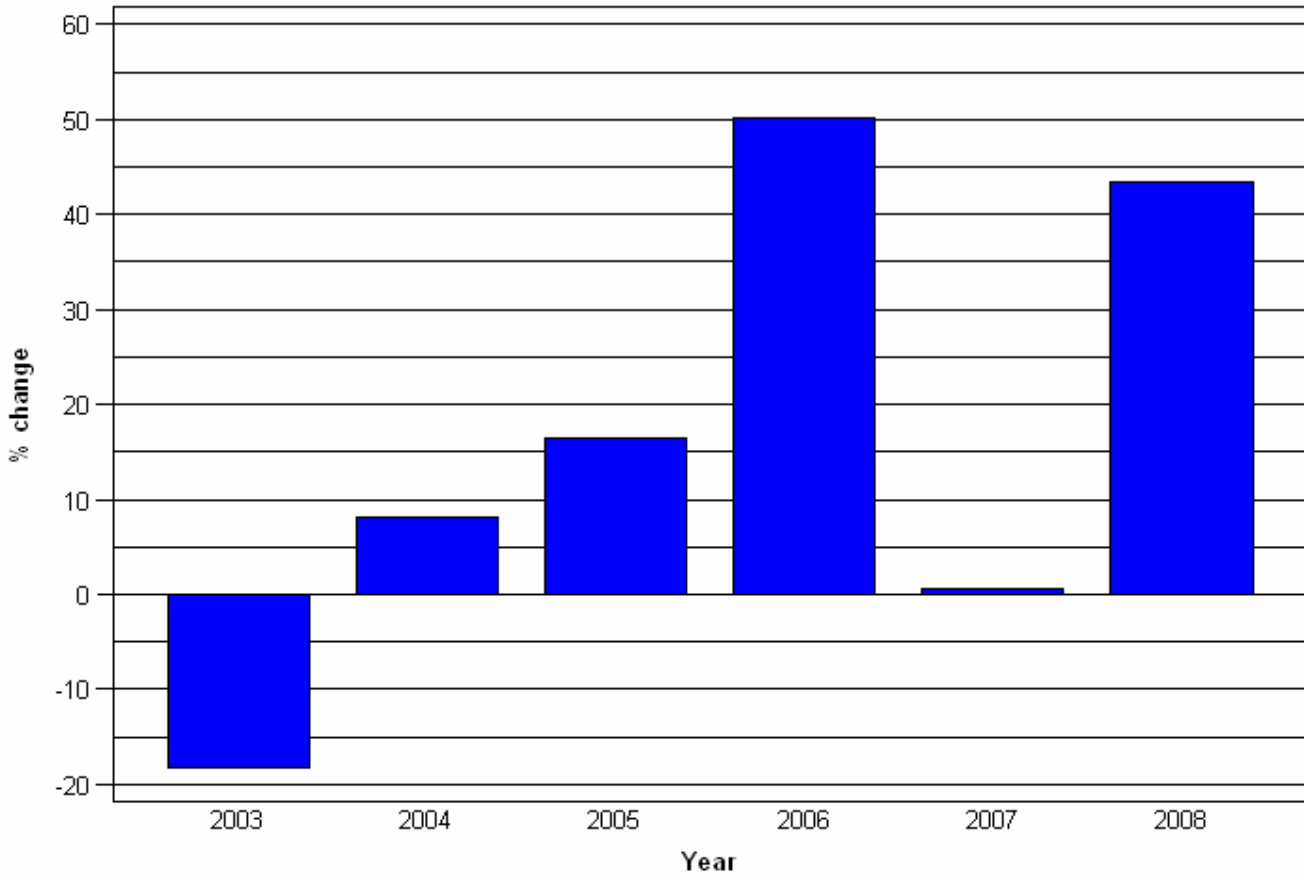

Figure 3 shows the 43,5% annual growth rate in the value of mineral sales for the three months ended October 2008. The increase for 2008 represents the second highest growth rate compared to the other years for the same period since 2003. The annual growth rate in the value of mineral sales for the three months ended October 2006 was 50,1%.

Figure 3 – Comparison of the last six years for the total value of mineral sales for the three months ended October compared with the three months ended October of the previous year

- Granite or norite	494,8	34,2	51,2	60,2	37,5	49,7	65,6
- Lime and limestone	1 708,0	163,1	173,1	187,6	152,3	173,9	174,9
- Other building materials	3 784,6	351,7	363,2	386,2	321,5	346,1	351,9
Other non-metallic minerals	17 137,7	1 546,9	1 744,3	2 393,8	1 364,4	1 459,4	2 102,8

1/ Preliminary.

Table 8 – Contribution of the mining divisions to the total value of mineral sales

		Percentage contribution to total mineral sales during August to October 2007	Percentage change between August to October 2007 and August to October 2008	Contribution (percentage points) to the percentage change in the total value of mineral sales 1/	Difference in sales of mining divisions between August to October 2007 and August to October 2008
					R million
Gold		17,2	17,8	3,1	1 721,4
Non-gold minerals	Iron ore	5,4	106,3	5,7	3 226,9
	Chromium	1,5	97,3	1,5	805,9
	Copper	3,0	-29,0	-0,9	-489,4
	Manganese ore	1,6	551,0	8,8	5 109,1
	PGMs	35,0	18,9	6,6	3 727,8
	Nickel	2,8	-27,8	-0,8	-437,6
	Other metallic minerals	2,2	19,7	0,4	240,9
	Coal	20,4	81,5	16,6	9 370,4
	Building materials	2,9	10,9	0,3	178,1
	Other non-metallic minerals	7,9	22,1	1,7	987,3
Total non-gold minerals		82,8	48,8	40,4	22 718,8
Total minerals		100,0	43,5	43,5	24 440,2

1/ The contribution to the percentage change in sales is calculated by multiplying the quarterly percentage change of each mineral with the percentage contribution to total mineral sales during August to October 2007, divided by 100.

Explanatory notes

Introduction	1	Statistics South Africa (Stats SA) publishes monthly information regarding the mining industry on the basis of mining production figures and mineral sales furnished by the Minerals Bureau, Department of Minerals and Energy. This statistical release contains detailed information regarding indices of the physical volume of mining production and the total value of mineral sales according to mining divisions and mineral groups on a monthly basis.
	2	In accordance with international practice, the indices have to be re-based every five years to a new base year. The base year of the index of the physical volume of mining production is currently 2000=100. Both actual and seasonally adjusted figures are presented.
	3	Due to mining production figures being available earlier than mineral sales figures, mining production indices are published one month earlier than mineral sales.
	4	The value of mineral sales is calculated, in general, on a free-on-rail/free-on-board basis.
	5	In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in future statistical release(s) as soon as more up-to-date information is available.
Purpose of the survey	6	The monthly mining production and sales survey is conducted by the Minerals Bureau, covering all mining establishments operating in the South African economy. The results of this survey are used to calculate physical volume of mining production indices in order to estimate the gross domestic product (GDP) and its components, which in turn are used to develop and monitor government policy.
Scope of the survey	7	This survey covers mining establishments conducting activities regarding <ul style="list-style-type: none"> • The extracting, dressing and beneficiating of minerals occurring naturally, for example solids such as coal and ores.
Classification	8	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division, major group and subgroup level. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment.
Statistical unit	9	The basic statistical unit for the collection of information is the mining establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 8).
Weighting	10	The weights which are used to aggregate minerals to mineral groups and mineral groups to total mining are based on the value of production derived from detailed information for 2000 supplied by the Minerals Bureau, Department of Minerals and Energy.

Seasonal adjustment	11	<p>Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month.</p> <p>Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.</p>
Reliability of estimates	12	<p>Estimates are subject to sampling and non-sampling errors. Figures for the latest month are preliminary.</p>
Historical data	13	<p>More comprehensive detail on the method of calculation and historical data in respect of the production indices according to mining mineral groups for the period February 1990 to November 2002 is available in statistical release P2041.1, entitled <i>Mining statistics: Indices of the physical volume of mining production, Base: 2000=100, February 1990 to November 2002</i>, published on 11 February 2003 on the Stats SA website: www.statssa.gov.za</p>
Related publications	14	<p>Users may also wish to refer to the following publications which are available from Stats SA -</p> <ul style="list-style-type: none"> • <i>Bulletin of Statistics.</i> • <i>SA Statistics.</i>
Unpublished statistics	15	<p>In some cases Stats SA can also make available statistics not included in standard publications. The statistics can be made available via computer printouts or diskette or CD. Generally, a charge is made for providing unpublished statistics.</p>
Rounding-off of figures	16	<p>The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.</p>

Glossary

Free-on-rail	Free-on-rail relates to goods sold on the local market where no railage or road transport costs are involved.
Free-on-board basis	Free-on-board relates to goods destined for the export market. Railage, road transport and docking charges are involved but no charges are made for the transport by sea.
Index of physical volume of mining production	The index of physical volume of mining production or a production index is a statistical measure of the change in the volume of production. The production index of a mineral group is the ratio between the volume of production of a mineral group in a given period and the volume of production of the same mineral group in the base period. The current base period is 2000. The production in the base period is set at 100.
Industry	An industry consists of a group of establishments engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts (SNA)</i> in the same way as in the <i>Standard Industrial Classification (SIC) of all Economic Activities</i> , Fifth Edition of January 1993.
PGMs - Platinum Group Metals	Platinum Group Metals include platinum; iridium; osmiridium; palladium; rhodium; ruthenium and osmium.
Sales	Sales are the total value of sales and transfers-out of goods mined by the mining establishments and the amounts received for installation, erection or assembly or other services rendered.
Weight	The weight of a mineral group is the ratio of the sales of a mineral group to the total sales of the mining industry. The weight of a mineral group reflects the importance of the mineral group in the total mining industry. The weights change over time due to quality changes and changes in relative prices. New weights need to be calculated from time to time.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, diskette, CD and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/8496/4892/8095.
