

# P3041.2

## Manufacturing: Production and sales

June 1997

Embargo: 13:00

Date: 14 August 1997

### MANUFACTURING PRODUCTION HIGHER THAN A YEAR AGO

*Although manufacturing production is levelling off, the production for the second quarter of 1997 is 3,8% higher than for the corresponding quarter of 1996 and the production for the first six months of 1997 increased by 3,9% compared with the first six months of 1996. Furthermore, the seasonally adjusted manufacturing production for the first six months of 1997 increased by 3,4% compared with the last six months of 1996.*

The main contributors to the increase of 3,4% in production were the basic metal products industries (contributing +0,6 of a percentage point), the chemical and petroleum products industries (+0,4 of a percentage point each) and machinery and electrical machinery industries (each contributing +0,3 of a percentage point). Higher production was reported in 19 of the 27 manufacturing major groups.

The seasonally adjusted sales of manufactured products increased by 5,2% (+R8 784,4 million) during the aforementioned period. The largest increases were reported by the basic metal products (+R1 422,2 million), petroleum products (+R866,7 million), chemical products (+R806,0 million) and electrical machinery industries (+R696,0 million).

#### SUMMARY - TOTAL MANUFACTURING

| Period                | Production            | Sales    | Percentage change of:  |       |
|-----------------------|-----------------------|----------|------------------------|-------|
|                       | indices<br>1990 = 100 | R mill.  | Production-<br>indices | Sales |
| Actual                |                       |          |                        |       |
| Apr. 1997 - Jun. 1997 | 106,4                 | 88 455,8 | +3,8                   | +10,2 |
| Apr. 1996 - Jun. 1996 | 102,5                 | 80 243,7 |                        |       |
| Seasonally adjusted   |                       |          |                        |       |
| Apr. 1997 - Jun. 1997 | 108,1                 | 90 288,3 | +2,3                   | +3,5  |
| Jan. 1997 - Mar. 1997 | 105,7                 | 87 204,0 |                        |       |

#### NOTES

1. This statistical release shows indices of the physical volume of manufacturing production and the value of sales and unfilled orders, **after benchmarking**, according to manufacturing major groups. Both actual and seasonally adjusted figures are shown. Sales and production figures for Walvis Bay are excluded as from 1 March 1994. **The former TBVC states are included.**  
In order to improve timeliness, some information for the current month may have been estimated due to late response. These estimates will be revised in the next issue(s) as soon as better information is available.
2. The calculation of the monthly production indices is based on the value of products and articles, manufactured after the effect of price changes has been eliminated through deflation by using appropriate sub-indices of the Production Price Index (PPI). The value of the manufactured products is obtained from a monthly sample survey of manufacturing establishments in the private and public sectors.
3. **The results of the 1988 and 1991 Manufacturing Censuses were used to adjust the level of the indices and the value of sales.** This process is known as benchmarking. The total value of gross output of the manufacturing major groups (which represents the total value of work done by the establishments in these groups) as obtained from the respective manufacturing censuses, was deflated with appropriate subindices of the Production Price

Index in order to calculate the real gross output. The latter served as benchmarks to verify or adjust the level of the monthly volume indices. The level adjustments were done on the volume indices for January of the relevant census year (e.g. the 1988 census year covers the period 1 July 1987 to 30 June 1988 and therefore the benchmarking was done on the index of January 1988).

4. The 1988 Manufacturing Census provided the framework for the selection of a revised sample implemented as from January 1995. A stratified systematic sample design based on gross output was used. Establishments which commenced operations after the census have also been taken into account. The weighting factors for the combining of the production indices for the manufacturing major groups to those for total manufacturing were calculated on the basis of the net output data obtained from the 1991 Manufacturing Census.

5. The 1988 and 1991 manufacturing censuses as well as the sample survey (before 1995) did not include information of the former TBVC states. Published and unpublished information

for 1988 and 1991 was obtained from statistical offices of the former TBVC states and has been incorporated to ensure a comparable time series. Since 1995 the level of the sample results was raised to link up with the benchmarks. The sample data do not reflect the influence of the cyclic movement of the establishments before January 1995 in the former TBVC states.

6. Production indices for the various manufacturing subgroups, that were previously published in the **Bulletin of Statistics**, were discontinued as from the indices for January 1993. The production indices on a subgroup basis can be obtained through approximation by deflating the value of sales according to manufacturing subgroups in statistical release P0142.1 (entitled **Production Price Index**) with the production price indices for the relevant manufacturing subgroups.
7. More comprehensive detail on the method of calculation and historical data in respect of the production indices according to manufacturing major groups and the value of sales for the period January 1987 to August 1995 were published in statistical releases P3041.3 (entitled **Manufacturing statistics: Indices of the physical volume of manufacturing production, Base: 1990=100, January 1987 to August 1995**) and P3041.4 (entitled **Manufacturing statistics: Value of sales, January 1987 to August 1995**).
