Statistiese vrystelling
Statistical release

P3041.2

Om 'n suksesvolle statistiese stelsel in die RSA te bedryf, is die samewerking tussen die Sentrale Statistiekdiens en die inwoners van die RSA, die private sektor en die owerheidsinstellings onontbeerlik. Sonder hierdie volgehoue samewerking en welwillendheid sal die tydige beskikbaarstelling van relevante en betroubare amptelike statistieke nie moontlik wees nie.

Co-operation between the Central Statistical Service and the residents of the RSA, the private sector and the government institutions is essential for a successful statistical system in the RSA. Without this continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

FABRIEKSPRODUKSTE STYG SKERP MET 4,9% IN DRIE MAANDE

Fabrieksproduksie vir November 1994 het met 1,1% toegeneem na seisoensaanpassing teenoor Oktober 1994 en het die hoogste vlak vir 1994 bereik. Fabrieksproduksie vir die jongste drie maande tot November 1994 is 4,9% hoër na seisoensaanpassing vergeleke met die vorige drie maande, en die tendenslyn is steeds besig om skerp te styg sedert Mei 1994 (sien grafiek).

Die fisiese volume van fabrieksproduksie vir die jongste drie maande tot November 1994 toon 'n merkbare toename van 4,9% na seisoensaanpassing vergeleke met die vorige drie maande. Toenames in produksie gedurende hierdie periode is gerapporteer in 20 van die 28 fabriekswese hoofgroepe. Die grootste bydraers tot die toename van 4,9% is die vervaardigers van motorvoertuie (1,5 persentasiepunte) en petroleum en steenkoolprodukte (1,2 persentasiepunte), gevolg deur die masjinerie en uitrustingnywerheid (0,4 van 'n persentasiepunt).

Die totale seisoensaangepaste waarde van fabrieksproduksieverkope vir die jongste drie maande tot November 1994 toon 'n toename van 6,4% vergeleke met die vorige drie maande. Die grootste toename is aangeteken deur die motorvoertuignywerheid (R1 575 miljoen). Merkbare toenames is aangeteken deur die voedselprodukte- (R337 miljoen), basiese yster- en staalprodukte- (R246 miljoen), basiese nie-yster metaalprodukte- (R210 miljoen) en masjinerie en uitrustingnywerheid (R303 miljoen).

MANUFACTURING PRODUCTION RISES SHARPLY BY 4,9% IN THREE MONTHS

Manufacturing production for November 1994 increased by 1,1% after seasonal adjustment compared with October 1994 and reached the highest level for 1994. Manufacturing production for the last three months up to November 1994 was 4,9% higher after seasonal adjustment compared with the previous three months and the trend line continues to rise sharply since May 1994 (see graph).

The physical volume of manufacturing production for the last three months up to November 1994 shows a noticeable increase of 4,9% after seasonal adjustment compared with the previous three months. Increases in production during this period were reported in 20 of the 28 manufacturing major groups. The main contributors to the increase of 4,9% were the manufacturers of motor vehicles (1,5 percentage points) and petroleum and coal products (1,2 percentage points), followed by the machinery and equipment industries (0,4 of a percentage point).

The total seasonally adjusted value of manufacturing sales for the last three months up to November 1994 shows an increase of 6,4% compared with the previous three months. The highest increase was recorded by the motor vehicle industry (R1 575 million). Noticeable increases were reported by the food products (R337 million), basic iron and steel products (R246 million), basic non-ferrous metal products (R210 million) and machinery and equipment industries (R303 million).

SUBGROEPIINDEXSE

1. Produksie-indeks vir die onderskeie fabriekswesesubgroepe, wat in die verlede in die *Bulletin van Statistieke* gepubliseer is, is sedert die indekse vir Januarie 1993 gestaak. Aangesien sub-indeks van die Produksieprysindeks (PPI), wat as deflators vir die waarde van produksie gebruik word tans slags op 'n hoofgroepondergrondslag beskikbaar is, kan produksie-indeks nie op 'n subgroepondergrondslag volgens die nuwe metode van berekening verkry word nie. Die berekening van die PPI op 'n subgroepondergrondslag word tans ondersoek. Die hervatting van die berekening en publikasie van die produksie-indeks op 'n subgroepondergrondslag sal oorweeg word sodra toepaslike PPI-subindekse beskikbaar is.
2. Die produksie-indeks op 'n subgroepondergrondslag kan egter by benadering verkry word deur die waarde van verkope volgens fabriekswesesubgroepe (kyk Tabel 6.2.2, *Bulletin van Statistieke*) te defleer met die produksieprysindeks (Tabel 3.1.2, *Bulletin van Statistieke*) vir die betrokke fabriekswesehoofgroep. Daar moet egter in gedagte gehou word dat die verloop van die produksieprysindeks vir 'n bepaalde hoofgroep nie noodwendig die verloop van die produksieprys in elk van die onderskeie subgroepe weerspieël nie.

OPMERKING

1. Hierdie statistiese vrystelling toon indekse van die fisiese volume van fabrieksproduksie en die waarde van verkope en onvoitooide bestellings volgens fabriekswesehoofgroepe. Beide werklike en seisoensaangepaste syfers word getoon. Verkope- en produksiesyfers t.o.v. Walvisbaai is uitgesluit vanaf 1 Maart 1994.
2. Die berekening van die maandelikse fabrieksproduksie-indeks is gebaseer op die waarde van vervaardigde produkte en artikels nadat die effek van prysveranderinge uitgeskakel is met deflering deur gebruik te maak van toepaslike subindekse van die produksieprysindeks (PPI). Die waarde van vervaardigde produkte word verkry uit 'n maandelikse steekproefopname van die fabrieks-inrigtings in die private en openbare sektore.
3. Die 1985-fabriekswesensus het die raamwerk verskaf vir die keuse van 'n hersiene steekproef wat vanaf Januarie 1989 in werking gestel is. 'n Gestratifiseerde sistematiese steekproefontwerp gebaseer op bruto opbrengs is gebruik. Inrigtings wat na die sensus met bedrywighede begin het, is ook in aanmerking geneem. Met ingang van 1988 is die beswaringsfaktore vir die samevoeging van die produksie-indeks vir die fabriekswesehoofgroepe na dié vir die totale fabriekswese bereken op grond van die netto opbrengsgegewens verkry uit die 1988-fabriekswesensus.
4. Die resultate van die 1988-fabriekswesensus is gebruik om die vlak van die indekse en die waarde van verkope te bepaal. Hierdie proses word hoogtemerkbepaling ("benchmarking") genoem.

SUBGROUP INDICES

1. Production indices for the various manufacturing subgroups that were previously published in the *Bulletin of Statistics* were discontinued as from the indices for January 1993. As the sub-indices of the Production Price Index (PPI) that are used as deflators for the value of production are at present available on a major group basis only, the production indices can not be obtained on a subgroup basis according to the new method of calculation. The calculation of the PPI on a subgroup basis is currently being investigated. The recommencement of the calculation and publication of the production indices on a subgroup basis will be considered as soon as the appropriate PPI sub-indices are available.
2. The production indices on a subgroup basis can however be obtained by approximation by deflating the value of sales according to manufacturing subgroups (see Table 6.2.2, *Bulletin of Statistics*) with the production price indices (Table 3.1.2, *Bulletin of Statistics*) for the relevant manufacturing major group. It must, however, be remembered that the trend of the production price index for a specific major group will not necessarily reflect the trend of the production prices for each of the various subgroups.

NOTES

1. This statistical release shows indices of the physical volume of manufacturing production and the value of sales and unfilled orders according to manufacturing major groups. Both actual and seasonally adjusted figures are shown. Sales and production figures for Walvis Bay are excluded as from 1 March 1994.
2. The calculation of the monthly manufacturing indices is based on the value of manufactured products and articles after the effect of price changes has been eliminated by deflation by using appropriate sub-indices of the production price index (PPI). The value of the manufactured products is obtained from a monthly sample survey of manufacturing establishments in the private and public sectors.
3. The 1985 Manufacturing Census provided the framework for the selection of a revised sample implemented as from January 1989. A stratified systematic sample design based on gross output was used. Establishments which commenced operations after the census have also been taken into account. With effect from 1988 the weighting factors for the combining of the production indices for the manufacturing major groups to those for total manufacturing were calculated on the basis of the net output data obtained from the 1988 Manufacturing Census.
4. The results of the 1988 Manufacturing Census were used to determine the level of the indices and the value of sales. This process is known as benchmarking.

5. Meer volledige besonderhede oor die berekeningswyse en historiese gegewens ten opsigte van die produksie-indeks volgens fabriekswese hoofgroepe en die waarde van verkope vir die periode Januarie 1978 tot Julie 1993 is in statistiese vrystellings P3041.3 (getiteld **Fabriekswesestatistiek: Indeks van die fisiese volume van fabrieksproduksie, Basis: 1990=100, Januarie 1978 tot Julie 1993**) en P3041.4 (getiteld **Fabriekswesestatistiek: Waarde van verkope, Januarie 1978 tot Julie 1993**) gepubliseer.

5. More comprehensive detail on the method of calculation and historical data in respect of the production indices according to manufacturing major groups and the value of sales for the period January 1978 to July 1993 were published in statistical releases P3041.3 (entitled **Manufacturing statistics: Indices of the physical volume of manufacturing production, Base: 1990=100, January 1978 to July 1993**) and P3041.4 (entitled **Manufacturing statistics: Value of sales, January 1978 to July 1993**).
