<a href="#">Table 115</a>	

## **Key findings**

### **The total value of sales of manufactured products increased**

*The total value of sales of manufactured products reflected an average annual increase of 9,0% from R187 793 million in 1990 to R373 569 million in 1998. The largest contributors to the 9,0% average annual increase were the motor vehicle with the annual average increase of 10,8%, the other chemicals (10,3%), the basic iron (8,6%), the metal products (8,5%), the beverage (9,7%) and*

*the food and food products (9,4%) divisions.*

***The real value of sales of manufactured products (at 1995 prices) reflected an average annual increase of 0,8% from R292 650 million in 1990 to R312 364 million in 1998.***

The largest contributors to the total value of sales of manufactured products (R373 569 million) in 1998 were the food and food products (14,7% or R54 944,8 million), the motor vehicles, trailers, parts and accessories (9,5% or R35 303,7 million), basic iron and steel (6,9% or R25 819,0 million) metal products (6,6% or 24 615,2 million) and the other chemical products and man-made fibres (6,4% or R23 774,6 million) divisions. In the food and food products division the subgroup flour and grain mill products contributed 17,3% to the total value of R54 944,8 million, followed by the vegetable and animal oils and fats (9,5%), the slaughtering, preparing and preserving of meat (9,4%), the prepared animal feeds (8,7%) and the sugar, golden syrup and castor sugar (8,4%) subgroups.

#### **Revised level of the value of sales of manufacturing establishments for 1993 to 1998**

As soon as the results of a Census of Manufacturing become available, Stats SA has to adjust the level of the value of sales as measured by the monthly sample survey in order to reflect the level of the value of sales as measured periodically by the Census of Manufacturing. This process is known as benchmarking (cf. Notes, p 3 for more information).

In November 1997 the results of the 1993 Census of Manufacturing was used to adjust the level of the value of sales from January 1990 to August 1997 with January 1993 as reference point. Therefore, the levels of total sales up to January 1993 remained to a large extent unchanged.

Stats SA has now revised the level of the total value of sales of manufacturing establishments as reflected by the monthly Manufacturing Production and Sales sample survey, using the 1996 Manufacturing Census results. The previous estimates of the value of sales were based on the information received from a sample of manufacturing establishments on a monthly basis, while the 1996 Census of Manufacturing covers all manufacturing establishments.

By using the process of benchmarking, the estimates of the value of sales by manufacturing establishments has been revised for the period January 1993 to September 1999. The benchmarking was done using the sales of January 1996 as reference point.

The level of the total value of sales of manufacturing establishments, as reflected by the monthly survey for January 1996, was 2,0% lower than the 1996 Census of Manufacturing results. The level of the value of sales per subgroup was adjusted from January 1993 to January 1996 through using the average annual percentage change between January 1993, as reflected by the 1993 Census of Manufacturing and January 1996, as reflected by the 1996 Census of Manufacturing. From January 1996 to September 1999 the extent of the adjustment (2,0%) of the value of sales of the 1996 monthly sample survey (that is for the

period 1 July 1995 to 30 June 1996) to the total value of sales of the 1996 Census of Manufacturing was retained.

#### Higher level of sales value of manufacturing establishments

The effect of benchmarking was that the revised level of sales by manufacturing establishments was 2,0% higher than the previous estimates for the period 1996 to 1998 as illustrated in table A.

**Table A - Value of sales by manufacturing establishments according to the previous and revised estimates and deviation due to benchmarking**

<b>Total manufacturing</b>	<b>1993</b>	<b>1994</b>	<b>1995</b>	<b>1996</b>	<b>1997</b>	<b>1998</b>
Previous value of sales (R million)	232 164	257 045	303 793	332 496	360 892	366 108
Revised value of sales due to benchmarking (R million)	232 442	259 367	308 790	339 097	368 283	373 569
Deviation (R million)	278	2 322	4 997	6 601	7 391	7 461
Deviation due to benchmarking (percentage)	0,1	0,9	1,6	2,0	2,0	2,0

#### Higher growth in the level of the value of sales by manufacturing establishments from 1993 to 1998

According to the revised level of the value of sales, the average annual percentage change is 9,9% during the 1993 to 1998 period compared with the previous estimate of 9,5% (as reflected in the rightmost column of table B) during the same period.

**Table B - Annual percentage change in the level of the value of sales by manufacturing establishments**

<b>Total manufacturing</b>	<b>1993</b>	<b>1994</b>	<b>1995</b>	<b>1996</b>	<b>1997</b>	<b>1998</b>	<b>1993-1998</b>
Previous annual percentage change	7,9	10,7	18,2	9,4	8,5	1,4	9,5
Revised annual percentage change	8,2	11,6	19,1	9,8	8,6	1,4	9,9

## Notes

**General** This statistical release reflects the revised sales of the manufacturing industry according to divisions, major groups and subgroups for the period January 1990 to September 1999 on a monthly basis after having adjusted the level of the value of sales as indicated by the monthly Manufacturing Production and Sales Survey to the level of the value of sales as indicated by the periodic 1991, 1993 and 1996 Censuses of Manufacturing. The information in this statistical release replaces previously published monthly Manufacturing Production and Sales information.

**Purpose of the survey** The results of the monthly Manufacturing Production and Sales Survey are used to estimate the value of sales to monitor and develop Government policy. The revised production indices will be published in a historical statistical release - Manufacturing statistics, Indices of the physical volume of manufacturing production, Base: 1995=100, January 1990 to September 1999.

**Benchmarking** The level of activities as measured by the monthly Manufacturing Production and Sales sample survey is based on information received from a sample of manufacturing establishments which is weighted according to the original sample design in order to represent the population of manufacturing establishments. The levels obtained from the 1991, 1993 and 1996 Census of Manufacturing are based on information received from all manufacturing establishments (the total population). It is necessary to adjust the level of the value of sales as measured by the monthly sample survey in order to reflect the level of the value of sales as measured periodically by the Census of Manufacturing. This procedure, whereby the latest results of an economic census are used to compile more accurate level estimates for a certain year, is known as benchmarking.

The results of the 1991, 1993 and 1996 Censuses of Manufacturing were used to adjust the level of the monthly sample survey data for the period January 1990 to September 1999.

The level adjustments were done on the value of sales for January of the relevant census year (e.g. the 1996 census year covers the period 1 July 1995 to 30 June 1996 and therefore the benchmarking was done using the sales of January 1996 as reference point). The only exception is the motor vehicle major group where the financial year for most of the establishments covered the period 1 January 1995 to 31 December 1995. The benchmarking was done using the sales for July 1995 as reference point.

The value of sales are calculated by weighting the monthly sample to represent the total value of sales of all manufacturing establishments. As from this statistical release, the weights are calculated on the basis of the total value of sales reported in the 1996 Census of Manufacturing.

**Sample** The 1988 Census of Manufacturing provided the frame for the selection of the monthly sample regarding manufacturing production and sales which was implemented as from January 1995. A stratified

systematic sample design based on gross output was used. All statistical units were stratified by type of establishment according to the Standard Industrial Classification of all Economic Activities (SIC) and measure of size, where measure of size was the total manufacturing gross output of the establishment. All size category one cases (large establishments) are completely enumerated. For size category two (medium size establishments) and size category three (small establishments), samples were drawn by systematically selecting establishments with equal probability.

## Additional information

### Explanatory Notes

**Introduction 1** The information in this historical statistical release is based on a monthly sample survey and the 1991, 1993 and 1996 Census of Manufacturing conducted by Statistics South Africa (Stats SA). This statistical release contains detailed historical information regarding the total value of sales of manufactured products according to divisions, major groups and subgroups on a monthly basis. Both actual and seasonally adjusted figures are shown.

**2** The total value of sales for the manufacturing divisions, major groups and subgroups is reflected from January 1990 to September 1999 in this statistical release in order to provide users with comparable time series in the analyses of comparative business and industry performance regarding sales. The information in this statistical release replaces previously published monthly information.

**Scope of the survey 3** This survey covers establishments conducting activities regarding -

- the manufacture, processing, making or packing of products;
- the slaughtering of animals, including poultry; and
- installation, assembly, completion, repair and related work.

**Classification 4** The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division, major group and subgroup level. Each statistical unit is classified to an industry which reflects the predominant activity of the establishment (branch).

**Statistical unit 5** The basic unit for the collection of information is the manufacturing establishment. An establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (cf. paragraphs 3 and 4 for more information regarding classification by industry).

**Survey methodology and 6** The information in this statistical release is based on a monthly sample survey as

**design** well as the results of the 1991, 1993 and 1996 Censuses of Manufacturing. The monthly sample survey is collected by mail each month from a sample of approximately 2 500 manufacturing establishments.

**Reliability of estimates 7** Estimates are subject to sampling and non-sampling errors. Data on the former Transkei, Bophuthatswana, Venda and Ciskei (TBVC states) are included as from January 1990.

**Comparability with manu- 8** The information contained in this statistical release differs in certain cases from

**facturing census results** the results of the 1991, 1993 and 1996 Censuses of Manufacturing. These differences can mainly be attributed to the following:

- Establishments were reclassified according to additional information obtained after the results of the censuses were published.
- Census results were adjusted by using additional information obtained from Stats SA's short term surveys and information obtained by means of queries to manufacturing establishments.
- Annexure A reflects the updated value of sales as reported by establishments for the 1993 and the 1996 Censuses of Manufacturing. These figures are used as benchmarks and differ from published Census results due to the above-mentioned reasons.

**Related publications 9** Users may wish to refer to the following publications which are available from Stats SA -

- P3041.2-Manufacturing: Production and sales.
- P3041.3 -Manufacturing: Indices of the physical volume of manufacturing production, Base: 1995=100, January 1990 to

September 1999.

- Bulletin of Statistics.
- SA Statistics.

**Unpublished statistics 10** In some cases Stats SA can also make available statistics which are not published. The statistics can be made available as computer printouts or diskette. Generally a

charge is made for providing unpublished statistics.

**Rounding-off of figures 11** The figures in the tables have, where necessary, been rounded off to the nearest final digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

## Glossary

**Benchmarking** Benchmarking is the adjustment of the level of a variable e.g. sales as measured by a sample survey to the level of the variable as reflected by the economic census for a certain year.

**Enterprise (firm)** An enterprise (firm) is a legal entity consisting of one or more establishments (branches) including the head office, excluding holding or subsidiary companies.

**Establishment** An establishment is defined as an enterprise (firm), or part of an enterprise, that is situated at a single location and in which only a single (non-ancillary) productive activity is carried out or in which the principal productive activity accounts for most of the value added.

**Industry** An industry consists of a group of establishments engaged in the same or similar kinds of activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the Standard Industrial Classification of all Economic Activities (Fifth Edition) of January 1993 (SIC).

**Sales** Sales are the total value of sales and transfers-out of all own manufactured products/articles and the amounts received for installation, erection or assembly or other services rendered.
