#### **Results for December 2013**

Table A – Selected key figures regarding electricity generated and available for distribution

Actual estimates	December 2013	% change between December 2012 and December 2013	% change between October to December 2012 and October to December 2013	% change between January to December 2012 and January to December 2013
Electricity available for distribution (Gigawatt-hours)	18 701	1,3	0,3	-0,5
Index of the physical volume of electricity production (2010=100)	93,2	-0,9	-1,8	-0,7

<sup>1/</sup> Preliminary.

Seasonally adjusted estimates	December 2013	% change between November and December 2013	% change between July to September 2013 and October to December 2013	
Electricity available for distribution (Gigawatt-hours)	19 605	2,2	-1,4	
Index of the physical volume of electricity production (2010=100)	97,7	0,8	-1,7	

#### Consumption of electricity

The actual volume of electricity consumption increased by 1,3% year-on-year in December 2013. Seasonally adjusted electricity consumption increased by 2,2% month-on-month in December 2013, following a month-on-month decrease of 1,5% in November 2013. Seasonally adjusted electricity consumption decreased by 1,4% in the fourth quarter of 2013 compared with the previous quarter. Annual consumption of electricity decreased by 0,5% in 2013 compared with 2012.

#### **Production of electricity**

The actual estimated electricity production decreased by 0,9% year-on-year in December 2013. Seasonally adjusted electricity production increased by 0,8% month-on-month in December 2013, following a month-on-month decrease of 0,8% in November 2013. Seasonally adjusted electricity production decreased by 1,7% in the fourth quarter of 2013 compared with the previous quarter. Annual production of electricity decreased by 0,7% in 2013 compared with 2012.

#### Electricity delivered by Eskom to the provinces

The total volume of electricity delivered by Eskom to the provinces decreased by 0,5% (-1 064 Gigawatt-hours) in 2013 compared with 2012. Decreases were reported in five of the nine provinces, with the largest volume decrease recorded for North West (-686 Gigawatt-hours), followed by Free State (-676 Gigawatt-hours) and Gauteng (-608 Gigawatt-hours). KwaZulu-Natal recorded the largest volume increase (771 Gigawatt-hours) over this period.

Table B – Comparison of the seasonally adjusted volume of electricity generated and available for distribution in the fourth quarter of 2013 and the previous quarter

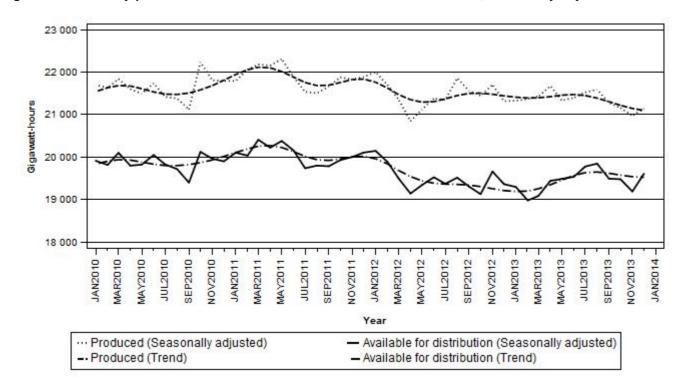

Gigawatt-hours	Seasonally adjusted quantity July to September 2013	Seasonally adjusted quantity October to December 2013	% change between July to September 2013 and October to December 2013	Quantity difference between July to September 2013 and October to December 2013	
Electricity produced	64 392	63 274	-1,7	-1 118	
Electricity available for distribution in South Africa	59 115	58 273	-1,4	-842	

Table C – Comparison of actual estimates between the fourth quarter of 2013 and the fourth quarter of 2012

Gigawatt-hours	Actual volume October to December 2012	Actual volume October to December 2013	% change between October to December 2012 and October to December 2013	Quantity difference between October to December 2012 and October to December 2013
Electricity produced	63 758	62 591	-1,8	-1 167
Purchased outside South Africa (import) 1/	1 893	2 797	47,8	904
Consumed in power stations and auxiliary systems	4 664	4 426	-5,1	-238
Sold outside South Africa (export) 2/	3 693	3 512	-4,9	-181
Electricity available for distribution in South Africa	57 295	57 450	0,3	155

<sup>1/</sup> Physical energy flowing into South Africa as measured by the metering systems at the South African borders.

Figure 1 - Electricity produced and available for distribution in South Africa, seasonally adjusted and trend

#### **Explanatory notes**

#### Introduction

1

Statistics South Africa (Stats SA) conducts a monthly sample survey of the electricity industry covering electricity undertakings and establishments (branches). This statistical release contains information regarding the volume of electricity units generated and available for distribution in South Africa, the volume of units purchased and sold outside South Africa and the volume of units distributed by Eskom by province on a monthly basis. Both actual and seasonally adjusted figures are published.

- This statistical release reflects indices of the physical volume of electricity production on the basis of 2010=100. In accordance with international practice, the indices have to be rebased every five years to a new base year.
- In order to improve timeliness of the publication, some information for the current month may have been estimated due to late submission by respondents. These estimates will be revised in the next statistical release(s) as soon as actual information is available.

# Purpose of the 4 survey

The results of the monthly electricity generated and available for distribution survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy.

## Scope of the 5 survey

This survey covers electricity undertakings and establishments conducting activities concerned with the generation or transmission and distribution of electricity. It includes electrical power installations, which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.

#### Classification 6

The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Each statistical unit is classified to an industry, which reflects the predominant activity of the electricity undertaking or establishment.

#### Collection rate 7

The collection rate for the survey on electricity generated and available for distribution for December 2013 was 96%. The improved collection rate for November 2013 was 96%.

#### Statistical unit 8

The basic statistical unit for the collection of information is the electricity undertaking or establishment. The electricity undertaking or establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 5).

#### Survey methodology and design

All statistical units are stratified by type of economic activity according to the *Standard Industrial Classification of all Economic Activities* (SIC) and measure of size, where measure of size is the volume of electricity generated by the electricity undertaking or establishment. All large undertakings or establishments (size category one cases) are completely enumerated. A sample is drawn from medium and small size undertakings and establishments by systematically selecting undertakings or establishments within each size category. An electricity undertaking or establishment with a total generating capacity of less than 500 kilowatt is excluded from the sample.

The survey is conducted by mail, email and telephone. Information is collected from a sample of 25 electricity undertakings or establishments.

# Monthly production indices

11

9

The calculation of the monthly production indices is based on the volume of electricity units produced.

#### Benchmarking 12

The index of physical volume of electricity production should provide an accurate reflection of the trend of activities of the relevant industry. The level of activities, as measured by the monthly electricity generated and available for distribution survey, is based on information received from a sample of electricity undertakings and establishments. These levels are weighted according to the original sample and designed to represent the population of electricity undertakings and establishments. It is necessary to adjust the level of activities as measured by the monthly sample survey to the level of activities as measured periodically by the Census of electricity, gas and steam. This procedure, whereby the latest results of an economic census are used to compile more accurate level estimates for a certain year, is known as benchmarking.

The results of the 1995 Census of electricity, gas and steam served as a benchmark to verify or adjust the level of the monthly physical volume of electricity production indices collected through the monthly sample survey. The level adjustments were done on the volume indices for August of the relevant census year (the 1995 census year covered the period 1 January 1995 to 31 December 1995 and therefore, the benchmarking was done using the index of August 1995 as reference point).

### Seasonal 14 adjustment

Seasonally adjusted estimates of all items are generated each month, using the X-12-ARIMA Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from a time series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X12-ARIMA procedure for electricity generated and available for distribution is described in more detail on the Stats SA website at <a href="http://www.statssa.gov.za/publications/P4141/electricity seasonal adjustment note 2012.pdf">http://www.statssa.gov.za/publications/P4141/electricity seasonal adjustment note 2012.pdf</a>

#### Trend cycle

15

16

The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates.

# Rounding-off 17 of figures

Where necessary, the figures in the tables have been rounded off to the nearest digit shown. There may therefore be slight discrepancies between the sums of the constituent items and the totals shown.

#### **Glossary**

Consumption of electricity

For purposes of this release the term 'consumption of electricity' is used interchangeably with the term 'electricity available for distribution'.

**Electricity undertaking** 

An electricity undertaking is an undertaking concerned with the generation or transmission and distribution of electricity, including electrical power installations, which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.

Index of physical volume of electricity production

A statistical measure of the change in the volume of production of electricity in a given period and the volume of production of electricity in the base period. The base period is 2010. The production in the base period is set at 100.

Industry

An industry consists of a group of undertakings or establishments engaged in the same or similar kinds of economic activity. Industries are defined in the 1993 System of National Accounts (1993 SNA) in the same way as in the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02.

Unit of electricity

One gigawatt-hour of electricity is equal to one million kilowatt-hours. A kilowatt-hour is the basic unit of electrical energy equal to one kilowatt of power supplied to or taken from an electric circuit steadily for one hour. One kilowatt-hour equals one thousand watt-hours.

#### **General information**

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

#### Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

#### Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division National Library of South Africa, Cape Town Division Natal Society Library, Pietermaritzburg Library of Parliament, Cape Town Bloemfontein Public Library Johannesburg Public Library Eastern Cape Library Services, King William's Town Central Regional Library, Polokwane Central Reference Library, Nelspruit Central Reference Collection, Kimberley Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

#### **Electronic services**

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.
