Generation and consumption of electricity

June 2002

Co-operation between Statistics South Africa (Stats SA), the citizens of the country, the private sector and government institutions is essential for a successful statistical system. Without continued co-operation and goodwill, the timely release of relevant and reliable official statistics will not be possible.

Stats SA publishes approximately three hundred different releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally, but also by international economic and social-scientific communities, Stats SA releases are published in English only.

This data in this statistical release adheres to the Special Data Dissemination Standard (SDDS) of the International Monetary Fund (IMF), which sets out standards on coverage, periodicity and timeliness of data; access by the public; integrity; and quality of the disseminated data.

Embargo: 13:00

Date: 1 August 2002

Key figures as at the end of June 2002

Actual estimates	June 2002	% change between June 2001 and June 2002	% change between April 2001 to June 2001 and April 2002 to June 2002	% change between January 2001 to June 2001 and January 2002 to June 2002		
Electricity consumed (Gigawatt-hours)	17 763	+5,8%	+4,8%	+2,5%		
Electricity imported (Gigawatt-hours)	704	-11,7%	-4,8%	+6,9%		
Electricity exported (Gigawatt-hours)	601	+21,2%	+16,2%	+7,1%		
Index of the physical volume of electricity production (2000=100)	108,6	+7,4%	+5,6%	+2,7%		

Seasonally adjusted estimates	June 2002	% change between May 2002 and June 2002	% change between January 2002 to March 2002 and April 2002 to June 2002
Electricity consumed (Gigawatt-hours)	17 071	+0,9%	+3,9%
Electricity imported (Gigawatt-hours)	733	-2,5%	-0,6%
Electricity exported (Gigawatt-hours)	666	-1,5%	+10,5%
Index of the physical volume of electricity production (2000=100)	104,4	+0,7%	+4,8%

Key findings as at the end of June 2002

Consumption of electricity increases

The consumption of electricity for the second quarter of 2002, after seasonal adjustment, increased by 3,9% (+1 928 Gigawatt-hours) compared with the first quarter of 2002. Furthermore, the consumption of electricity for June 2002 increased by 5,8% (+975 Gigawatt-hours) compared with June 2001. The consumption of electricity in South Africa for the first six months of 2002 increased by 2,5% (+2 416 Gigawatt-hours) compared with the first six months of 2001.

Production of electricity increases

The production of electricity for the second quarter of 2002, after seasonal adjustment, increased by 4,8% (+2 460 Gigawatt-hours) compared with the first quarter of 2002. Furthermore, the production of electricity for June 2002 increased by 7,4% (+1 316 Gigawatt-hours) compared with June 2001. The production of electricity in South Africa for the first six months of 2002 increased by 2,7% (+2 748 Gigawatt-hours) compared with the first six months of 2001.

Import of electricity decreases

The seasonally adjusted import of electricity from neighbouring countries for the second quarter of 2002 decreased by 0,6% (-14 Gigawatt-hours) compared with the first quarter of 2002. Furthermore, the import of electricity for June 2002 decreased by 11,7% (-93 Gigawatt-hours) compared with June 2001. However, the import of electricity in South Africa for the first six months of 2002 increased by 6,9% (+269 Gigawatt-hours) compared with the first six months of 2001.

Export of electricity increases

The seasonally adjusted export of electricity for the second quarter of 2002 increased by 10,5% (+194 Gigawatt-hours) compared with the first quarter of 2002. Furthermore, the export of electricity for June 2002 increased by 21,2% (+105 Gigawatt-hours) compared with June 2001. The export of electricity in South Africa for the first six months of 2002 increased by 7,1% (+218 Gigawatt-hours) compared with the first six months of 2001.

Explanatory Notes

Introduction

- Statistics South Africa (Stats SA) conducts a monthly sample survey of the electricity industry covering electricity undertakings and establishments (branches). This statistical release contains information regarding the number of electricity units produced and consumed in South Africa and the number of units purchased and sold outside South Africa on a monthly basis. Both actual and seasonally adjusted figures are published.
- This statistical release reflects indices of the physical volume of electricity production. In accordance with international practice, the indices have to be rebased every five years to a new base year. The indices in this statistical release have been calculated on the basis of 2000=100. Rebased indices were published in the October 1997 Statistical release P4141 Generation and Consumption of Electricity on 4 December 1997.
- In order to improve timeliness of the publication, some information for the current month may have been estimated due to late submission by respondents. These estimates will be revised in the next statistical release(s) as soon as actual information is available.

Scope of the survey

This survey covers electricity undertakings and establishments conducting activities concerned with the generation or transmission and distribution of electricity, including electrical power installations which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.

Classification

The 1993 edition of the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Each statistical unit is classified to an industry, which reflects the predominant activity of the electricity undertaking or establishment.

Statistical unit

The basic statistical unit for the collection of information is the electricity undertaking or establishment. The electricity undertaking or establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (cf. paragraph 6).

Survey methodology and design

All statistical units are stratified by type of economic activity according to the Standard Industrial Classification of all Economic Activities (SIC) and measure of size, where measure of size is the volume of electricity generated by the electricity undertaking or establishment. All large undertakings or establishments (size category one cases) are completely enumerated. A sample is drawn from medium and small size undertakings and establishments by systematically selecting undertakings or establishments within each size category. An electricity undertaking or establishment with a total generating capacity of less than 500 kilowatt is excluded from the sample.

8 The survey is conducted by mail each month collecting information from a sample of 22 electricity undertakings or establishments.

Monthly production indices

9 The calculation of the monthly production indices is based on the number of electricity units produced.

Benchmarking

10

The index of physical volume of electricity production should provide an accurate reflection of the trend of activities of the relevant industry. The level of activities as measured by the monthly Generation and Consumption of Electricity sample survey is based on information received from a sample of electricity undertakings and establishments which is weighted according to the original sample design in order to represent the population of electricity undertakings and establishments. It is necessary to adjust the level of activities as measured by the monthly sample survey to the level of activities as measured periodically by the Census of Electricity, Gas and Steam. This procedure, whereby the latest results of an economic census are used to compile more accurate level estimates for a certain year, is known as benchmarking.

The results of the 1995 Census of Electricity, Gas and Steam served as benchmarks to verify or adjust the level of the monthly physical volume of electricity production indices collected through the monthly sample survey. The level adjustments were done on the volume indices for July of the relevant census year (the 1995 census year covered the period 1 January 1995 to 31 December 1995 and, therefore, the benchmarking was done using the index of July 1995 as reference point). The results, due to benchmarking, were published in the October 1997 statistical release P4141 - Generation and Consumption of Electricity on 4 December 1997.

Seasonal adjustment

12

Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

Trend cycle

13

The trend is the long-term pattern or movement of a time series. The X-11 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates.

Related publications

14

Users may also wish to refer to the following publications which are available from Stats SA -

- Bulletin of Statistics.
- SA Statistics.

Unpublished statistics 15

In some cases Stats SA can also make available statistics which are not published. The statistics can be made available as computer printouts, on diskette or CD. Generally a charge is made for providing unpublished statistics.

Rounding-off of figures 16

The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

Pre-release policy

17

- Stats SA has adopted the confidential pre-release policy in respect of selected economic indicators and specific government departments. The policy accords with practice among leading statistical agencies. The statistical integrity of the indices and strict observance of the release time has been assured by the following procedure:
- In respect of this statistical release, an official representative from the Office of the President, the Department of Trade and Industry, the Department of Finance and the South African Reserve Bank will receive a copy of the release on a strictly confidential basis two hours in advance of the public issue.
- Stats SA pre-release policy may be inspected at its Website, www.statssa.gov.za

Technical notes

Response rates

The response rate for the survey on the generation and consumption of electricity for June 2002 is 100%.

Glossary

Electricity undertaking is an undertaking concerned with the generation or

transmission and distribution of electricity, including electrical power installations, which as subsidiary divisions of undertakings, produce electricity for regular use by

these undertakings.

Establishment (branch) An establishment (branch) is defined as the smallest economic unit, which operates

as a separate entity for which comprehensive financial records are kept.

Index of physical volume of The index of physical volume of electricity production or a production index is a **electricity production** statistical measure of the change in the volume of production. The production

index of electricity is the ratio between the volume of production of electricity in a given period and the volume of production of electricity in the base period. The

base period is 2000. The production in the base period is set at 100.

Industry An industry consists of a group of undertakings or establishments engaged in the

same or similar kinds of economic activity. Industries are defined in the 1993 System of National Accounts (1993 SNA) in the same way as in the Standard Industrial Classification of all Economic Activities (SIC). Fifth Edition Papert No.

Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No.

09-90-02.

Unit of electricity One unit of electricity is equal to 1 kilowatt-hour (kWh). One gigawatt-hours

(gWh) of electricity is equal to one million kilowatt-hours.

For more information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.
