SUMMARY OF FINDINGS: ELECTRICITY GENERATED AND AVAILABLE FOR DISTRIBUTION (OCTOBER 2009)

Key figures

Table A – Selected key figures regarding electricity generated and available for distribution for October 2009

Actual estimates	October 2009	% change between October 2008 and October 2009	% change between August to October 2008 and August to October 2009	% change between January to October 2008 and January to October 2009
Electricity available for distribution (Gigawatt-hours)	19 899	-1,2	-1,5	-4,1
Index of the physical volume of electricity production (2005=100)	105,6	-3,5	-1,8	-4,7

1/ Preliminary.

Seasonally adjusted estimates	October 2009	% change between September and October 2009	% change between May to July 2009 and August to October 2009
Electricity available for distribution (Gigawatt-hours)	19 787	1,4	2,1
Index of the physical volume of electricity production (2005=100)	103,9	-1,1	2,1

Key findings

Seasonally adjusted consumption of electricity increases

Electricity consumption after seasonal adjustment increased by 1,4% in October 2009 compared with September 2009 and by 2,1% in the three months ended October 2009 compared with the previous three months (see Tables A, B and 3). However, the actual estimated consumption of electricity in October 2009 was 1,2% lower (-239 Gigawatt-hours) compared with October 2008 (see Tables A, 2 and 9a).

Seasonally adjusted production of electricity increases

The estimated seasonally adjusted production of electricity for the three months ended October 2009 increased by 2,1% compared with the previous three months (see Tables A and B). The actual estimated total production of electricity in October 2009 decreased by 3,5% (-772 Gigawatt-hours) compared with October 2008 (see Tables A, 5 and 9a).

Distribution of electricity by Eskom to the provinces lower than a year ago

Electricity distributed to the provinces for the first ten months of 2009 was 3,8% lower (-7 123 Gigawatt-hours) compared with the first ten months of 2008. Lower figures were reported for eight provinces during this period, ranging from -8,9% for Mpumalanga to -2,2% for Gauteng. KwaZulu-Natal was the only province with an increase (1,5%) during this period (see Table 10).

International trade in electricity

The volume of electricity purchased from outside South African borders increased from 8 786 Gigawatt-hours in the first ten months of 2008 to 10 243 Gigawatt-hours in the first ten months of 2009, representing an increase of 16,6% (1 457 Gigawatt-hours). The volume of electricity sold to neighbouring countries during this period decreased by 1,3% (-151 Gigawatt-hours) compared with the first ten months of 2008 (see Table 9b).

Table B – Comparison of the seasonally adjusted volume of electricity generated and available for distribution between the current quarter and the previous quarter

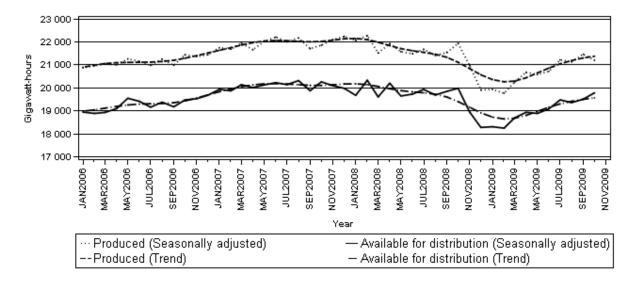

Gigawatt-hours	Seasonally adjusted quantity May to July 2009	Seasonally adjusted quantity August to October 2009	% change between May to July 2009 and August to October 2009	Difference between May to July 2009 and August to October 2009	
Electricity produced	62 521	63 806	2,1	1 285	
Electricity available for distribution in South Africa	57 463	58 664	2,1	1 201	

Table C – Comparison of actual estimates between the current quarter and the corresponding quarter of the previous year

Gigawatt-hours	Actual volume August to October 2008	Actual volume August to October 2009	% change between August to October 2008 and August to October 2009	Difference between August to October 2008 and August to October 2009
Electricity produced	66 221	65 077	-1,7	-1 144
Purchased outside South Africa (import)	2 765	3 107	12,4	342
Consumed in power stations and auxiliary systems	4 704	4 698	-0,1	-6
Sold outside South Africa (export)	3 681	3 808	3,5	127
Electricity available for distribution in South Africa	60 599	59 679	-1,5	-920_

Figure 1 below shows the seasonally adjusted and trend patterns for electricity produced and available for distribution in South Africa from January 2006 to October 2009.

Figure 1 – Electricity produced and available for distribution in South Africa from 2006 to 2009

 $[\]ensuremath{\mathrm{1/\,Wholesale}}$ energy as delivered by Eskom to the various provinces. $\ensuremath{\mathrm{2/\,Preliminary}}.$

Explanatory Notes

Introduction

1

Statistics South Africa (Stats SA) conducts a monthly sample survey of the electricity industry covering electricity undertakings and establishments (branches). This statistical release contains information regarding the volume of electricity units generated and available for distribution in South Africa, the volume of units purchased and sold outside South Africa and the volume of units distributed by Eskom by province on a monthly basis. Both actual and seasonally adjusted figures are published.

- This statistical release reflects indices of the physical volume of electricity production on the basis of 2005=100. In accordance with international practice, the indices have to be rebased every five years to a new base year.
- In order to improve timeliness of the publication, some information for the current month may have been estimated due to late submission by respondents. These estimates will be revised in the next statistical release(s) as soon as actual information is available.

Purpose of the 4 survey

The results of the monthly electricity generated and available for distribution survey are used to compile estimates of the Gross Domestic Product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy.

Scope of the 5 survey

This survey covers electricity undertakings and establishments conducting activities concerned with the generation or transmission and distribution of electricity, including electrical power installations, which, as subsidiary divisions of undertakings, produce electricity for regular use by these undertakings.

Classification 6

The 1993 edition of the *Standard Industrial Classification of all Economic Activities* (*SIC*), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 *International Standard Industrial Classification of all Economic Activities* (*ISIC*) with suitable adaptations for local conditions. Each statistical unit is classified to an industry, which reflects the predominant activity of the electricity undertaking or establishment.

Response rate 7

The response rate for the survey on electricity generated and available for distribution for October 2009 was 99%.

Statistical unit 8

The basic statistical unit for the collection of information is the electricity undertaking or establishment. The electricity undertaking or establishment is the smallest economic unit that functions as a separate entity. Each statistical unit is classified to an industry (see paragraph 5).

Survey methodology and design

9

11

All statistical units are stratified by type of economic activity according to the *Standard Industrial Classification of all Economic Activities (SIC)* and measure of size, where measure of size is the volume of electricity generated by the electricity undertaking or establishment. All large undertakings or establishments (size category one cases) are completely enumerated. A sample is drawn from medium and small size undertakings and establishments by systematically selecting undertakings or establishments within each size category. An electricity undertaking or establishment with a total generating capacity of less than 500 kilowatt is excluded from the sample.

The survey is conducted by mail, email and telephone each month collecting information from a sample of 22 electricity undertakings or establishments.

Monthly production indices

The calculation of the monthly production indices is based on the volume of electricity units produced.

Statistics South Africa 12 P4141

Benchmarking 12

The index of physical volume of electricity production should provide an accurate reflection of the trend of activities of the relevant industry. The level of activities as measured by the monthly electricity generated and available for distribution survey is based on information received from a sample of electricity undertakings and establishments, which are weighted according to the original sample, designed in order to represent the population of electricity undertakings and establishments. It is necessary to adjust the level of activities as measured by the monthly sample survey to the level of activities as measured periodically by the Census of electricity, gas and steam. This procedure, whereby the latest results of an economic census are used to compile more accurate level estimates for a certain year, is known as benchmarking.

The results of the 1995 Census of electricity, gas and steam served as benchmarks to verify or adjust the level of the monthly physical volume of electricity production indices collected through the monthly sample survey. The level adjustments were done on the volume indices for August of the relevant census year (the 1995 census year covered the period 1 January 1995 to 31 December 1995 and therefore, the benchmarking was done using the index of August 1995 as reference point).

Seasonal adjustment

14

16

18

19

Seasonally adjusted estimates of all items are generated each month, using the X-11 Seasonal Adjustment Program developed by US Bureau of the Census Economic Research and Analyses Division, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognized. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. This means the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.

Trend cycle 15

The trend is the long-term pattern or movement of a time series. The X-11 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates.

Unpublished 17 statistics

In some cases Stats SA can also make available statistics, which are not published. The statistics can be made available as computer printouts or on CD. Generally a charge is made for providing unpublished statistics.

Rounding-off figures

The figures in the tables have, where necessary, been rounded off to the nearest digit shown. There may, therefore, be slight discrepancies between the sums of the constituent items and the totals shown.

Glossary

Consumption of electricity

For purposes of this release the term 'consumption of electricity' is used

interchangeably with the term 'electricity available for distribution'.

Electricity undertaking

An electricity undertaking is an undertaking concerned with the generation or transmission and distribution of electricity, including electrical power installations, which as subsidiary divisions of undertakings produce electricity for regular use by

these undertakings.

Index of physical volume of electricity production

A statistical measure of the change in the volume of production of electricity in a given period and the volume of production of electricity in the base period. The

base period is 2005. The production in the base period is set at 100.

Industry An industry consists of a group of undertakings or establishments engaged in the

same or similar kinds of economic activity. Industries are defined in the 1993 System of National Accounts (1993 SNA) in the same way as in the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No.

09-90-02.

One gigawatt-hour of electricity is equal to one million kilowatt-hours. A kilowatt-Unit of electricity

> hour is the basic unit of electrical energy equal to one kilowatt of power supplied to or taken from an electric circuit steadily for one hour. One kilowatt-hour equals

one thousand watt-hours.

Stats SA Statistics South Africa Revised figures

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advanced release calendar

An advanced release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via on-line services, diskette, CD and computer printouts.
