## STATISTICAL RELEASE

P6242.1

# Retail trade sales (Preliminary) 

July 2021

The results published today are based on a new sample. This is an annual procedure which typically affects the level of sales at both current and constant prices. To avoid breaks in time series and to minimise revisions to historical growth rates, historical sales levels were revised (i.e. they were linked to the estimates based on the new sample).

## Sales at constant 2015 prices: results for July 2021

Table A - Key growth rates in retail trade sales at constant 2015 prices

|  | Feb-21 | Mar-21 | Apr-21 | May-21 | Jun-21 | Jul-21 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Year-on-year \% change, unadjusted | 2,0 | $-2,3$ | 95,1 | 15,5 | 10,5 | $-0,8$ |
| Month-on-month \% change, seasonally adjusted | 7,4 | $-4,2$ | $-0,7$ | 2,3 | 0,7 | $-11,2$ |
| 3-month \% change, seasonally adjusted 1/ | 1,9 | 1,8 | 2,7 | 0,1 | 0,5 | $-2,9$ |

1/ Percentage change between the previous 3 months and the 3 months ending in the month indicated.
Measured in real terms (constant 2015 prices), retail trade sales decreased by 0,8\% year-on-year in July 2021. The largest negative annual growth rates were recorded for retailers in:

- household furniture, appliances and equipment (-10,2\%);
- hardware, paint and glass (-6,2\%); and
- food, beverages and tobacco products in specialised stores (-4,1\%) - see Table 5.

The main negative contributor to this decrease was general dealers (contributing -1,1 percentage points) - see Table 6.

Seasonally adjusted retail trade sales decreased by $11,2 \%$ in July 2021 compared with June 2021. This followed month-on-month changes of $0,7 \%$ in June 2021 and $2,3 \%$ in May 2021. In the three months ended July 2021, seasonally adjusted retail trade sales decreased by $2,9 \%$ compared with the previous three months.

Table B - Retail trade sales at constant 2015 prices for the latest three months by type of retailer

| Type of retailer | $\begin{aligned} & \text { May - Jul } \\ & 2020 \\ & \text { (R million) } \end{aligned}$ | Weight | $\begin{gathered} \text { May - Jul } \\ 2021 \end{gathered}$ <br> (R million) | \% change between May - Jul 2020 and <br> May - Jul 2021 | Contribution (\% points) to the total \% change |
| :---: | :---: | :---: | :---: | :---: | :---: |
| General dealers | 96025 | 45,3 | 100249 | 4,4 | 2,0 |
| Food, beverages and tobacco in specialised stores | 12661 | 6,0 | 14768 | 16,6 | 1,0 |
| Pharmaceuticals and medical goods, cosmetics and toiletries | 16797 | 7,9 | 17563 | 4,6 | 0,4 |
| Textiles, clothing, footwear and leather goods | 36415 | 17,2 | 40312 | 10,7 | 1,8 |
| Household furniture, appliances and equipment | 12428 | 5,9 | 13209 | 6,3 | 0,4 |
| Hardware, paint and glass | 20132 | 9,5 | 20571 | 2,2 | 0,2 |
| All other retailers | 17624 | 8,3 | 23245 | 31,9 | 2,6 |
| Total | 212082 | 100,0 | 229917 | 8,4 | 8,4 |

Retail trade sales increased by 8,4\% in the three months ended July 2021 compared with the three months ended July 2020. The main contributors to this increase were:

- all 'other' retailers ( $31,9 \%$ and contributing 2,6 percentage points);
- general dealers ( $4,4 \%$ and contributing 2,0 percentage points); and
- retailers in textiles, clothing, footwear and leather goods (10,7\% and contributing 1,8 percentage points) see Table B.

| Month-on-month \% change, seasonally adjusted | 7,7 | $-3,3$ | $-0,3$ | 2,0 | 2,1 | $-10,9$ |
| 3-month \% change, seasonally adjusted 1/ | 2,4 | 2,1 | 3,7 | 1,2 | 1,9 | $-1,7$ |

1/ Percentage change between the previous 3 months and the 3 months ending in the month indicated.

Table D - Retail trade sales at current prices for the latest three months by type of retailer

| Type of retailer | $\begin{gathered} \text { May - Jul } \\ 2020 \end{gathered}$ <br> (R million) | Weight | $\begin{gathered} \text { May - Jul } \\ 2021 \end{gathered}$ <br> (R million) | \% change between May - Jul 2020 and <br> May - Jul 2021 | Contribution (\% points) to the total \% change |
| :---: | :---: | :---: | :---: | :---: | :---: |
| General dealers | 118673 | 47,8 | 129897 | 9,5 | 4,5 |
| Food, beverages and tobacco in specialised stores | 16543 | 6,7 | 20547 | 24,2 | 1,6 |
| Pharmaceuticals and medical goods, cosmetics and toiletries | 21123 | 8,5 | 23272 | 10,2 | 0,9 |
| Textiles, clothing, footwear and leather goods | 39373 | 15,9 | 44027 | 11,8 | 1,9 |
| Household furniture, appliances and equipment | 11705 | 4,7 | 12491 | 6,7 | 0,3 |
| Hardware, paint and glass | 22361 | 9,0 | 24051 | 7,6 | 0,7 |
| All other retailers | 18319 | 7,4 | 24502 | 33,8 | 2,5 |
| Total | 248094 | 100,0 | 278789 | 12,4 | 12,4 |

## Risenga Maluleke Statistician-General

## Note: Changes to the survey and the impact on the statistical series

## Business register and samples

Today Statistics South Africa (Stats SA) publishes results for the monthly survey of retail trade sales from a new sample drawn in April 2021, which replaces the previous sample that was drawn in April 2019. The sample was drawn from a business register of enterprises with an annual turnover of at least R1 167786 and that are required to register with the South African Revenue Service for value added tax.

Owing to the evolving nature of business, the business register is maintained on a continuous basis. The maintenance process is aimed, amongst other things, at capturing changes related to new businesses, ceased businesses, merged businesses and classification changes. In addition, Stats SA undertakes quality improvement surveys related to the business register, the primary objective of which is to capture up-to-date information about the structures and activities of large and complex businesses. This process enables Stats SA to review classification codes for these businesses. These changes are an essential part of the statistical architecture.

## Comparison of total sales between the previous (revised) and new samples for the retail trade industry

The reported level of total sales for the monthly survey of the retail trade industry for the months April to June 2021 based on the new sample was $1,0 \%$ higher than the level of total sales recorded for the previous sample (see Table E and Figure 3). The previous sample was drawn in April 2019 and was operational for the last half of 2019, 2020 and the first half of 2021.

Table E - Total retail trade sales at current prices for previous and new samples: April to June 2021

| Retail trade industry | Previous sample <br> (R million) | New sample <br> ( R million) | Difference |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | (R million) | (\%) |
|  | 283768 | 1,0 |  |  |

Figure 3 - Total retail trade sales at current prices: monthly levels of previous and new samples for April to June 2021

Table F - Retail trade sales for previous and new samples by type of retailer: April to June 2021

| Type of retailer | Previous sample (R million) | New sample (R million) | Difference |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | (R million) | (\%) 1/ |
| General dealers | 129547 | 131413 | 1866 | 1,4 |
| Food, beverages and tobacco in specialised stores | 23897 | 22139 | -1758 | -7,4 |
| Pharmaceuticals and medical goods, cosmetics and toiletries | 22451 | 22893 | 442 | 2,0 |
| Textiles, clothing, footwear and leather goods | 47889 | 44367 | -3 522 | -7,4 |
| Household furniture, appliances and equipment | 11115 | 12492 | 1377 | 12,4 |
| Hardware, paint and glass | 22243 | 23683 | 1440 | 6,5 |
| All other retailers | 23223 | 26144 | 2921 | 12,6 |
| Total retail trade sales | 280363 | 283131 | 2768 | 1,0 |

1/ The percentage difference is the new sample minus the previous sample, divided by the previous sample, multiplied by 100.
The largest percentage differences were recorded for:

- all 'other' retailers ( $12,6 \%$ or R2 921 million higher in the new sample);
- retailers in household furniture, appliances and equipment (12,4\% or R1 377 million higher in the new sample);
- retailers in textiles, clothing, footwear and leather goods (7,4\% or R3 522 million lower in the new sample); and
- retailers in food, beverages and tobacco products in specialised stores (7,4\% or R1 758 million lower in the new sample).

## Backcasting

To avoid breaks in the time series and to minimise revisions to historical growth rates, historical sales levels were revised (i.e. they were linked to the estimates based on the new sample).

## Survey information

## Introduction

Purpose of the survey

Scope of the survey

Collection rate
6 The preliminary collection rate for the survey on retail trade sales for July 2021 was $64,6 \%$, accounting for $70,2 \%$ of the total estimate. The collection rate for June 2021 for the new sample was $67,3 \%$.

| Statistical unit | 7 | The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data. |
| :---: | :---: | :---: |
| Revised figures | 8 | Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such. |
| Related publications | 9 | Users may also refer to the following publication available from Stats SA: |
|  |  | - Stats in Brief issued annually. |
| Rounding-off of figures | 10 | Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals. |
| Historical data | 11 | Historical retail trade sales data are available on the Stats SA website. To access the data electronically, use the following link: <br> Click to download historical data |
| Past publications | 12 | Past retail trade sales releases are available on the Stats SA website. To access the releases electronically, use the following link: <br> Click to download past releases |

## Technical notes

## Survey methodology and design

## Class limits

## Sample weighting

## Seasonal adjustment

1 The survey is conducted on a monthly basis. Questionnaires are sent to a sample of 3095 enterprises from a population of 22041 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax, email and telephone reminders are used to follow up on non-respondents.

2 A stratified random sample was drawn at the SIC four-digit level in April 2021 from Stats SA's business sampling frame (BSF). Strata were formed using a combination of the Standard Industrial Classification and the measure of size classes for enterprises (see point 3 below).

The Neyman optimal allocation formula given below was used to allocate samples to each stratum:

$$
\mathrm{nh}=\mathrm{n} \text { * }(\mathrm{Nh} * \mathrm{Sh}) /\left[\Sigma\left(\mathrm{Ni}^{*} \mathrm{Si}\right)\right] .
$$

Neyman allocation formula not only allocates sample sizes to each stratum, but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata did not exceed 8,0\%.

3 The retail sampling frame is divided into four size groups. All large and medium enterprises (size group one and two) are completely enumerated. Simple random sampling is applied to size group three and four (small and very small) enterprises. The total value of sales of the large and medium enterprises (size group one and two) is added to the weighted totals of size group three and four to reflect the total value of sales.
Measure of size classes (Rand)

| Enterprise size | Size group | Lower limits | Upper limits |
| :--- | :---: | ---: | ---: |
| Very small | 4 | 1167786 | 8000000 |
| Small | 3 | 8000001 | 38000000 |
| Medium | 2 | 38000001 | 78000000 |
| Large | 1 | 78000001 |  |

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form group estimates. These procedures are consistent with international best practice.

Seasonally adjusted estimates are generated each month using the X-12 Seasonal Adjustment Program developed by the US Bureau of the Census. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series, even after adjustment for seasonal variations. Therefore, the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for retail trade sales is described in more detail on the Stats SA website: Click to Download Seasonal adjustment Retail Trade Sales February 2018

Black Friday sales have had a substantial upward impact on retail trade in November in recent years. Since seasonal adjustment models are based on long time series, users should note that Stats SA's seasonally adjusted estimates do not yet fully account for the Black Friday effect.

Note: Owing to the impact of the COVID-19 lockdown, additive outlier and transitory change adjustments were applied. Transitory (temporary) change describes a temporary effect on the level of a series after a certain point in time.

## Trend cycle

Constant prices

Reliability of estimates

Month-on-month percentage change

Year-on-year percentage change

## Contribution (percentage points)

6 The trend is the long-term pattern or movement of a time series. The X-12 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimate the underlying trend cycle.

7 For January 2002 to December 2007 retail trade sales at constant prices were calculated using the consumer price index (CPI) for goods, excluding petrol and purchases of vehicles, for all urban areas to deflate total sales at current prices. From January 2008 onwards total retail trade sales at constant prices are obtained by adding up the deflated sales by type of retailer.

8 Retail trade sales at constant prices by type of retailer are obtained by deflating estimated sales at current prices by the relevant weighted price index. To obtain total retail trade sales at constant prices, estimates of the deflated sales for each type of retailer are aggregated.

9 Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the retail industry in South Africa. Estimates are subject to sampling and non-sampling errors.

10 Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise nonsampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.

11 The month-on-month percentage change in a variable for any given month is the change between that month and the previous month, expressed as a percentage of the latter.

12 The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.

13 The contribution (percentage points) to the year-on-year percentage change for any given period is calculated by multiplying the percentage change of each type of retailer by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of retailer to total retail trade sales in the corresponding period of the previous year.

## Glossary

Enterprise An enterprise is a legal entity or a combination of legal units that includes and directly

Industry

Retail trade

Retailer

Symbols and abbreviations controls all functions necessary to carry out its sales activities.

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the System of National Accounts (SNA) in the same way as in the Standard Industrial Classification of all Economic Activities (SIC), Fifth Edition, Report No. 09-90-02 of January 1993.

Retail trade includes the resale (sale without transformation) of new and used goods and products to the general public for household use.

A retailer is an enterprise deriving more than 50\% of its turnover from sales of goods to the general public for household use.

| BSF | Business sampling frame |
| :--- | :--- |
| CPI | Consumer price index |
| GDP | Gross domestic product |
| ISIC | International Standard Industrial Classification |
| SARS | South African Revenue Service |
| SIC | Standard Industrial Classification of all Economic Activities |
| SNA | System of National Accounts |
| Stats SA | Statistics South Africa |
| VAT | Value added tax |

## General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

## Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:
National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, Qonce
Central Regional Library, Polokwane
Central Reference Library, Mbombela
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho
Stats SA also provides a subscription service.

## Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 3108600.

You can also visit us on the internet at: www.statssa.gov.za
