# Summary of findings: Retail trade sales

# Table A – Key figures as at the end of September 2009

Retail trade sales estimates	September 2009 (R million)	% change between September 2008 and September 2009	% change between July to September 2008 and July to September 2009	% change between January to September 2008 and January to September 2009
At current prices	42 431	3,7	4,5	6,0
At constant (2008) prices	37 724	-5,1	-5,2	-4,8

### Key findings as at the end of September 2009

#### Retail trade sales decrease in real terms

Retail trade sales, at constant (2008) prices, for the third quarter of 2009 reflected a decrease of 5,2% compared with the third quarter of 2008, while sales for the corresponding period in 2008 decreased by 0,9%. Retail trade sales, at constant (2008) prices, for September 2009 reflected a decrease of 5,1% compared with September 2008.

The major contributors to the decrease of 5,2% in retail trade sales, at constant (2008) prices, for the third quarter of 2009 compared with the third quarter of 2008 were all other retailers (-12,6% and contributing -1,8 percentage points), retailers in hardware, paint and glass (-19,5% and contributing -1,7 percentage points) and general dealers (-2,8% and contributing -1,1 percentage points) - see Table C on page 3.

#### Retail trade sales increase in nominal terms

Retail trade sales, at current prices, for the third quarter of 2009 increased by 4,5% compared with the third quarter of 2008. The major contributors to this increase were general dealers (9,3% and contributing 3,6 percentage points), retailers of food, beverages and tobacco in specialised stores (7,5% and contributing 0,8 of a percentage point) and retailers in textiles, clothing, footwear and leather goods (4,4% and contributing 0,8 of a percentage point) - see Table B on page 3.

Retail trade sales, at current prices, for September 2009 increased by 3,7% compared with September 2008, while sales for the corresponding period in 2008 increased by 10,4%.

#### Table B - Contribution of each type of retailer to the percentage change in retail trade sales at current prices

Type of retailer	July to September 2008 (R million)	Weight 1/	July to September 2009 (R million)	Difference between July to September 2008 and July to September 2009 (R million)	Percentage change between July to September 2008 and July to September 2009	Contribution (percentage points) to the percentage change in total sales 2/
General dealers	46 361	38,2	50 681	4 320	9,3	3,6
Retailers of food, beverages and tobacco in specialised stores	12 962	10,7	13 934	972	7,5	0,8
Retailers in pharmaceutical and medical goods, cosmetics and toiletries	5 738	4,7	6 603	865	15,1	0,7
Retailers in textiles, clothing, footwear and leather goods	21 832	18,0	22 803	971	4,4	0,8
Retailers in household furniture, appliances and equipment	6 558	5,4	6 361	-197	-3,0	-0,2
Retailers in hardware, paint and glass	10 429	8,6	9 191	-1 238	-11,9	-1,0
All other retailers	17 392	14,3	17 101	-291	-1,7	-0,2
Total 3/	121 272	100,0	126 674	5 402	4,5	4,5

1/ Weight is the percentage contribution of each type of retailer to the total retail trade sales for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of retailer with its corresponding weight, divided by 100.

3/ Figures have been rounded off. Therefore, discrepancies may occur between sums of the component items and the totals.

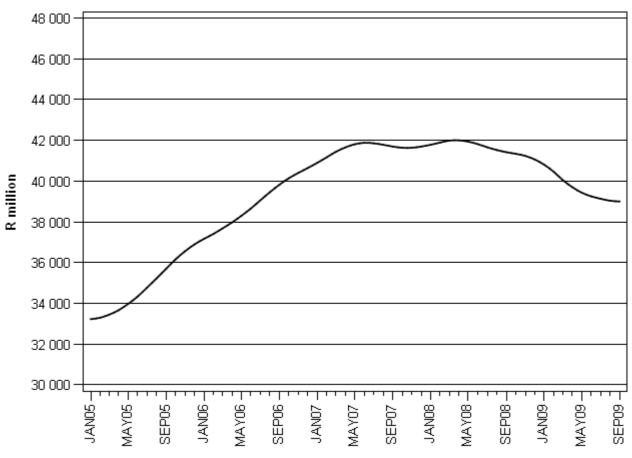

# Table C – Contribution of each type of retailer to the percentage change in retail trade sales at constant (2008) prices

Type of retailer	July to September 2008 (R million)	Weight 1/	July to September 2009 (R million)	Difference between July to September 2008 and July to September 2009 (R million)	Percentage change between July to September 2008 and July to September 2009	Contribution (percentage points) to the percentage change in total sales 2/
General dealers	45 694	38,2	44 412	-1 282	-2,8	-1,1
Retailers of food, beverages and tobacco in specialised stores	12 602	10,5	12 706	104	0,8	0,1
Retailers in pharmaceutical and medical goods, cosmetics and toiletries	5 676	4,7	5 733	57	1,0	0,0
Retailers in textiles, clothing, footwear and leather goods	21 709	18,2	21 109	-600	-2,8	-0,5
Retailers in household furniture, appliances and equipment	6 563	5,5	6 161	-402	-6,1	-0,3
Retailers in hardware, paint and glass	10 145	8,5	8 171	-1 974	-19,5	-1,7
All other retailers	17 132	14,3	14 971	-2 161	-12,6	-1,8
Total 3/	119 520	100,0	113 263	-6 257	-5,2	-5,2

1/Weight is the percentage contribution of each type of retailer to the total retail trade sales for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of retailer with its corresponding weight, divided by 100.

3/ Figures have been rounded off. Therefore, discrepancies may occur between sums of the component items and the totals.

Description of group types (Tables 5 to 8)  $^{1/}$ 

Group type	Type of dealer included in group type		
Туре А	General dealers		
Туре В	Retailers of food, beverages and tobacco in specialised stores		
Туре С	Retailers in pharmaceutical and medical goods, cosmetics and toiletries		
Туре D	Retailers in textiles, clothing, footwear and leather goods		
Туре Е	Retailers in household furniture, appliances and equipment		
Type F	Retailers in hardware, paint and glass		
Type G	All other retailers		

1/ See note 4 on page 10 for more detailed specifications.

**Explanatory notes** 

Introduction	1	Statistics South Africa (Stats SA) conducts a monthly survey of the retail trade industry, covering retail enterprises (see 4 below). This survey is based on a sample drawn from Stats SA's 2009 Business Sampling Frame (BSF) that contains businesses registered for value added tax (VAT).	
	2	As is usual, information for the latest month had to be estimated for respondents who have not reported by the cut-off date for production of results. These estimates will be revised in future statistical releases when their reported information becomes available. Published retail trade sales estimates include value added tax (VAT).	
Purpose of the survey	3	The results of the monthly retail trade sales survey are used to compile estimates of the Gross Domestic Product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.	
Scope of the survey	4	<ul> <li>This survey covers retail enterprises according to the following types of retailer:</li> <li>General dealers <ul> <li>Retail trade in non-specialised stores with food, beverages and tobacco predominating; and</li> <li>Other retail trade in non-specialised stores.</li> </ul> </li> <li>Retailers of food, beverages and tobacco in specialised stores <ul> <li>Retailers in fresh fruit and vegetables;</li> <li>Retailers in meat and meat products;</li> <li>Retailers in beverages;</li> <li>Retailers in other food in specialised stores.</li> </ul> </li> <li>Retailers in other food in specialised stores.</li> <li>Retailers in pharmaceutical and medical goods, cosmetic and toiletries;</li> <li>Retailers in harmaceutical and medical goods, cosmetic and toiletries;</li> <li>Retailers in textiles, clothing, footwear and leather goods</li> <li>Retailers in footwear.</li> <li>Retailers in household furniture, appliances and equipment;</li> <li>Retailers in hardware, paint and glass; and</li> <li>All other retailers</li> <li>Retailers in reading matter and stationery;</li> <li>Retailers in sports goods and entertainment requisites;</li> <li>Retailers in other specialised stores;</li> <li>Retailers in down and clocks;</li> <li>Retailers in down and clocks;</li> <li>Retailers in sports goods and entertainment requisites;</li> <li>Retailers in other specialised stores;</li> <li>Retailers in there specialised stores;</li> <li>Retailers in sports goods and entertainment requisites;</li> <li>Retailers in other specialised stores;</li> </ul>	
Classification	5	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> ( <i>SIC</i> ), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> ( <i>ISIC</i> ) with suitable adaptations for local conditions. Statistics in this publication are presented at SIC group (four digit) level. Each enterprise is classified to the industry, which reflects its predominant activity.	
Response rate	6	The preliminary response rate for the survey on retail trade sales for September 2009 was 87,7%. The improved response rate for the survey on retail trade sales for August 2009 was 91,9%.	
Statistical unit	7	The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.	

10

Survey methodology and design	8	The survey is conducted on a monthly basis. Questionnaires are sent to a sample of about 2 500 enterprises from a population of about 35 000 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-respondents.
	9	The value of sales is obtained monthly from the sample of about 2 500 enterprises (which was drawn in April 2009) at the SIC four-digit level from a population then of about 35 000 retail enterprises. The retail sampling frame is divided into four size groups. All large and medium enterprises (size groups one and two), are completely enumerated. Simple random sampling is applied to size groups three and four (small and very small) enterprises. The total value of sales of the large and medium enterprises (size groups one and two) is added to the weighted totals of size groups three and four to reflect the total value of sales.
Weighting methodology	10	For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form group estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at <u>www.statssa.gov.za/publications/publicationsearch.asp.</u>
Constant prices	11	For January 2002 to December 2007 retail trade sales at constant prices were calculated using the Consumer Price Index (CPI) for goods excluding petrol and purchases of vehicles, for all urban areas to deflate total sales at current prices. From January 2008 onwards total retail trade sales at constant prices are obtained by adding up the deflated sales by type of retailer.
	12	Retail trade sales at constant prices by type of retailer are obtained by deflating estimated sales at current prices by the relevant weighted price index. To obtain total retail trade sales at constant prices, estimates of the deflated sales for each type of retailer are aggregated.
Trend cycle	13	The trend is the long-term pattern or movement of a time series. The X-11 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.
Reliability of estimates	14	Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the retail industry in South Africa. Estimates are subject to sampling and non-sampling errors.
	15	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.
Revised figures	16	Normally revised figures are due to respondents reporting revisions or corrections to their figures and late submission of their data to Stats SA. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.
Related publications	17	Users may also wish to refer to the following publications available from Stats SA -
		<ul> <li>Bulletin of Statistics issued quarterly.</li> <li>SA Statistics issued annually.</li> </ul>
Rounding of figures	18	Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.
Pre-release policy	19	Stats SA's pre-release policy may be inspected at its Website, www.statssa.gov.za.

Technical note					
Neyman optimal allocation	A stratified random sample was drawn from the population of enterprises on the business sampling frame (BSF). Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises. The Neyman optimal allocation formula given below was used to allocate samples to each stratum. $n_{h = } - \frac{N_h S_h}{N_h S_h}$				
			$\sum N_h S$	'n	
	where N <sub>h</sub> and S <sub>h</sub> are the stratum population size and the stratum variance, respectively. Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata did not exceed 4,6%. Class limits

### **General information**

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

#### Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

#### Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division National Library of South Africa, Cape Town Division Natal Society Library, Pietermaritzburg Library of Parliament, Cape Town Bloemfontein Public Library Johannesburg Public Library Eastern Cape Library Services, King William's Town Central Regional Library, Polokwane Central Reference Library, Nelspruit Central Reference Collection, Kimberley Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

#### **Electronic services**

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.

You can visit us on the internet at: www.statssa.gov.za
