## Sales at current prices: results for January 2021

**Table A – Key growth rates in motor trade sales at current prices**

	Aug-20	Sep-20	Oct-20	Nov-20	Dec-20	Jan-21
Year-on-year % change, unadjusted	-11,1	-0,5	-7,4	-4,6	-1,0	-10,2
Month-on-month % change, seasonally adjusted	7,1	2,5	-2,2	1,6	0,1	-1,6
3-month % change, seasonally adjusted 1/	71,0	75,4	25,6	7,3	2,7	0,4

1/ Percentage change between the previous 3 months and the 3 months ending in the month indicated.

Measured in nominal terms (current prices), motor trade sales decreased by 10,2% year-on-year in January 2021. All six types of activities showed year-on-year decreases in January 2021. The main contributors were:

- fuel sales (-21,6% and contributing -6,5 percentage points); and
- new vehicle sales (-7,6% and contributing -1,8 percentage points) – see Tables 5 and 6.

Seasonally adjusted motor trade sales decreased by 1,6% in January 2021 compared with December 2020. This followed month-on-month changes of 0,1% in December 2020 and 1,6% in November 2020.

In the three months ended January 2021, seasonally adjusted motor trade sales increased by 0,4% compared with the previous three months.

**Table B – Motor trade sales at current prices for the latest three months by type of activity**

Type of activity	Nov 2019 – Jan 2020 (R million)	Weight	Nov 2020 – Jan 2021 (R million)	% change between Nov 2019 – Jan 2020 and Nov 2020 – Jan 2021	Contribution (% points) to the total % change
New vehicle sales	40 477	24,5	38 838	-4,0	-1,0
Used vehicle sales	30 092	18,2	32 105	6,7	1,2
Workshop income	10 689	6,5	10 325	-3,4	-0,2
Income from the sales of accessories	26 822	16,2	27 546	2,7	0,4
Income from fuel sales	50 721	30,7	41 834	-17,5	-5,4
Income from convenience store sales 1/	6 354	3,8	5 767	-9,2	-0,3
<b>Total</b>	<b>165 155</b>	<b>100,0</b>	<b>156 416</b>	<b>-5,3</b>	<b>-5,3</b>

1/ Includes 'other' sales and trading income.

Motor trade sales decreased by 5,3% in the three months ended January 2021 compared with the three months ended January 2020. The main negative contributor to this decrease was fuel sales (-17,5% and contributing -5,4 percentage points) – see Table B.

1/ Includes 'other' sales and trading income.

## Survey information

<b>Introduction</b>	<b>1</b>	Statistics South Africa (Stats SA) conducts a monthly survey covering enterprises in the motor trade industry (see 4 below). This survey is based on a sample drawn from Stats SA's 2019 business sampling frame (BSF) that contains businesses registered at the South African Revenue Service (SARS) for value added tax (VAT). Stats SA continuously updates its BSF, which is linked to the SARS administrative data.
	<b>2</b>	In order to improve timeliness, some information for the latest month had to be estimated due to late response. These estimates will be revised in future statistical releases as soon as information becomes available. Published motor trade sales estimates exclude VAT.
<b>Purpose of the survey</b>	<b>3</b>	The results of the monthly motor trade sales survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.
<b>Scope of the survey</b>	<b>4</b>	The survey collects information from a sample of enterprises in South Africa that are predominantly involved in motor trade. These enterprises include: <ul style="list-style-type: none"> <li>• motor vehicle dealers, filling stations and workshops;</li> <li>• motor cycle dealers;</li> <li>• spares and accessories;</li> <li>• tyre dealers;</li> <li>• automotive electricians;</li> <li>• radiator repairs;</li> <li>• panel beaters and spray painters;</li> <li>• 'other' specialised motor repair services; and</li> <li>• 'other' motor trade.</li> </ul>
<b>Classification</b>	<b>5</b>	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities</i> (SIC), Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities</i> (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to the industry which reflects its predominant activity. Statistics in this publication are presented at SIC group (four digits) level.
<b>Collection rate</b>	<b>6</b>	The preliminary collection rate for the survey on motor trade sales for January 2021 was 86,6%. The improved collection rate for December 2020 was 89,9%.
<b>Statistical unit</b>	<b>7</b>	The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its sales and service activities.
<b>Revised figures</b>	<b>8</b>	Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such.
<b>Related publications</b>	<b>9</b>	Users may also refer to the following publication available from Stats SA: <ul style="list-style-type: none"> <li>• <i>Stats in Brief</i> issued annually.</li> </ul>

- Rounding-off of figures** 10 Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.
- Historical data** 11 Historical motor trade data are available on the Stats SA website. To access the data electronically, use the following link: [Click to download historical data](#)
- Past publications** 12 Past motor trade releases are available on the Stats SA website. To access the releases electronically, use the following link: [Click to download past releases](#)

## Technical notes

- Survey methodology and design** 1 The survey is conducted monthly. Questionnaires are sent to a sample of 908 enterprises from a population of 10 660 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Email, fax and telephone reminders are used to follow up on non-respondents.
- 2 A stratified random sample was drawn in April 2019 from Stats SA's business sampling frame (BSF) at the SIC four-digit level. Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises (see point 3 below).

The Neyman optimal allocation formula given below was used to allocate samples to each stratum.

$$n_h = n * ( N_h * S_h ) / [ \sum ( N_i * S_i ) ].$$

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata was 3,8%.

- Class limits** 3 Each motor trade classification group (SIC at four digit level) is divided into four size groups. All large enterprises (size group one) are completely enumerated. Simple random sampling is applied to medium and small enterprises (size groups two, three and four). The total value of sales of the large enterprises (size group one) per classification group is added to the weighted totals of size groups two, three and four to reflect the total value of sales.

### Measure of size classes (Rand)

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	2 011 467	18 000 000
Small	3	18 000 001	85 500 000
Medium	2	85 500 001	175 500 000
Large	1	175 500 001	

- Sample weighting** 4 For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form classification group estimates. These procedures are consistent with international best practice.

<b>Seasonal adjustment</b>	<b>5</b>	<p>Seasonally adjusted estimates are generated each month using the X-12-ARIMA Seasonal Adjustment Program developed by the US Bureau of the Census. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be recognised more clearly. Seasonal adjustment does not aim to remove irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour. The X-12-ARIMA procedure for motor trade sales is described in more detail on the Stats SA website at: <a href="#">Click to download seasonal adjustment motor trade sales August 2017</a></p> <p><b>Note:</b> Owing to the impact of the COVID 19 lockdown, a transitory change adjustment was applied to April 2020. Transitory (temporary) change describes a temporary effect on the level of a series after a certain point in time.</p>
<b>Trend cycle</b>	<b>6</b>	<p>The trend is the long-term pattern or movement of a time series. The X-12-ARIMA Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.</p>
<b>Reliability of estimates</b>	<b>7</b>	<p>Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the motor trade industry in South Africa. Estimates are subject to sampling and non-sampling errors.</p>
	<b>8</b>	<p>Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.</p>
<b>Month-on-month percentage change</b>	<b>9</b>	<p>The month-on-month percentage change in a variable for any given month is the change between that month and the previous month, expressed as a percentage of the latter.</p>
<b>Year-on-year percentage change</b>	<b>10</b>	<p>The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.</p>
<b>Contribution (percentage points)</b>	<b>11</b>	<p>The contribution (percentage points) to the year-on-year percentage change is calculated by multiplying the percentage change of each type of activity by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of activity to total motor trade sales in the corresponding period of the previous year.</p>

## Glossary

**Enterprise** An enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.

**Industry** An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts (SNA)* in the same way as in the *Standard Industrial Classification of all Economic Activities (SIC)*, Fifth Edition, Report No. 09-90-02 of January 1993.

## Symbols and abbreviations

BSF	Business sampling frame
GDP	Gross domestic product
ISIC	International Standard Industrial Classification
IT	Income tax
Rm	Rand million
SIC	Standard Industrial Classification of all Economic Activities
SARS	South African Revenue Service
Stats SA	Statistics South Africa
VAT	Value added tax

## General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

## Advance release calendar

A release calendar is disseminated on [www.statssa.gov.za](http://www.statssa.gov.za)

## Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Mbombela  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

## Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.

You can visit us on the internet at: [www.statssa.gov.za](http://www.statssa.gov.za)
