Summary of findings: Motor trade sales

Table A – Key figures for October 2010

Actual estimates	October 2010 (R million)	% change between October 2009 and October 2010	% change between August to October 2009 and August to October 2010	% change between January to October 2009 and January to October 2010
Motor trade sales	29 853	13,9	17,9	15,6

Seasonally adjusted estimates	October 2010 (R million)	% change between September and October 2010	% change between May to July 2010 and August to October 2010
Motor trade sales	28 606	-1,2	1,2

Key findings for October 2010

Actual motor trade sales estimates

Table A indicates that the actual motor trade sales estimates for the three months ended October 2010 increased by 17,9% compared with the three months ended October 2009. Sales for the corresponding period in 2009 decreased by 11,3%.

The major contributors to the increase of 17,9% were new vehicle sales (39,7% and contributing 9,1 percentage points), used vehicle sales (19,9% and contributing 3,7 percentage points) and fuel sales (11,9% and contributing 3,0 percentage points) – see Table B.

Motor trade sales rose by 13,9% year-on-year in October 2010, the eleventh consecutive positive growth rate recorded since December 2009 – see Table 2.

Seasonally adjusted motor trade sales

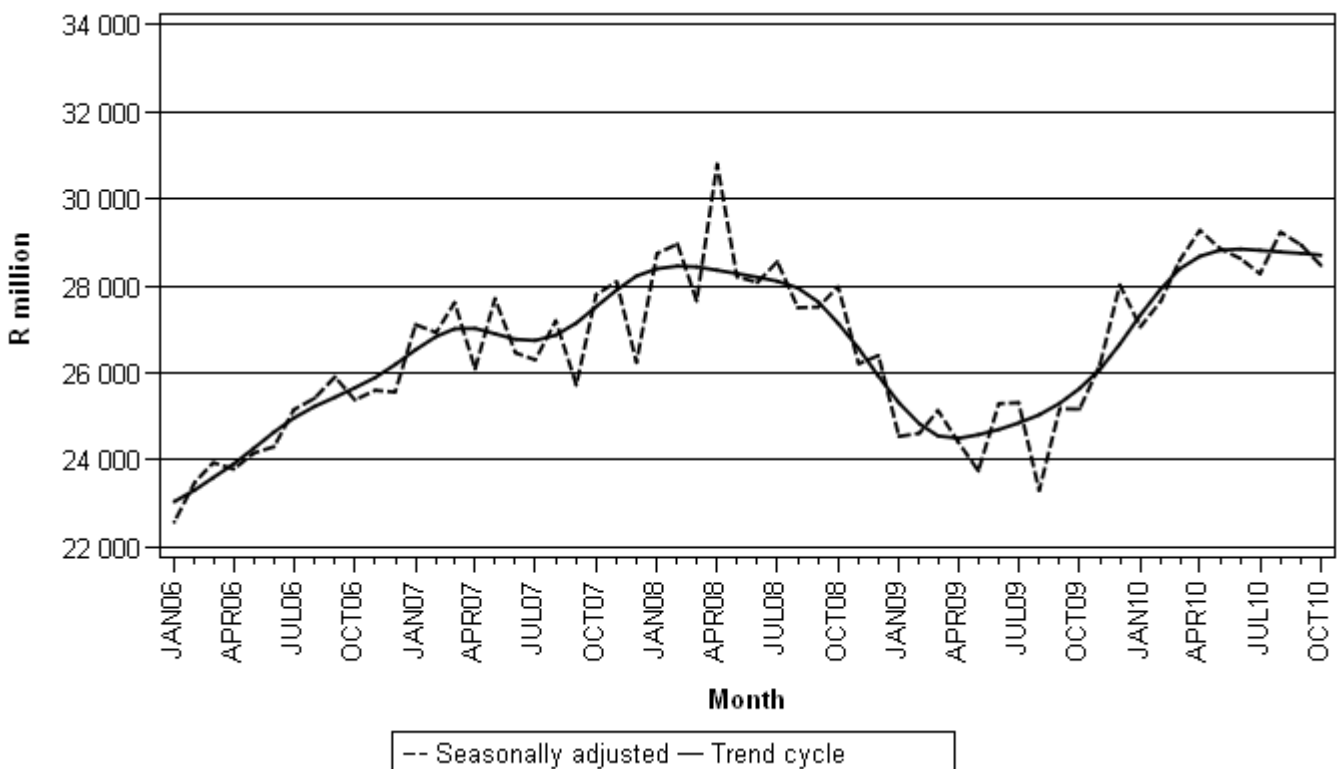

Seasonally adjusted motor trade sales for the three months ended October 2010 increased by 1,2% compared with the three months ended July 2010, while sales between September and October 2010 decreased by 1,2% – see Table A.

Table B – Contribution of each type of activity to the percentage change in motor trade sales

Type of activity	August to October 2009 (R million)	Weight 1/	August to October 2010 (R million)	Difference in sales between August to October 2009 and August to October 2010 (R million)	% change between August to October 2009 and August to October 2010	Contribution (percentage points) to the % change in total sales 2/
New vehicle sales	17 485	23,0	24 429	6 944	39,7	9,1
Used vehicle sales	14 234	18,8	17 066	2 832	19,9	3,7
Workshop income	6 268	8,3	6 853	585	9,3	0,8
Income from the sales of accessories	14 439	19,0	15 454	1 015	7,0	1,3
Income from fuel sales	18 984	25,0	21 247	2 263	11,9	3,0
Income from convenience store sales 3/	4 496	5,9	4 423	-73	-1,6	-0,1
Total 4/	75 907	100,0	89 471	13 564	17,9	17,9

1/ Weight is the percentage contribution of each type of activity to the total motor trade sales for the three months up to the current month of the previous year.
 2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of activity with the corresponding weight, divided by 100.
 3/ Includes other sales and trading income.
 4/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and totals.

Motor trade sales	28 958	28 606	-1,2	85 766	86 812	1,2

Explanatory notes

Introduction	1	Statistics South Africa (Stats SA) conducts a monthly survey covering enterprises in the motor trade industry (see 4 below). This survey is based on a sample drawn from 2010 Business Sampling Frame (BSF), which contains businesses registered for value added tax (VAT).
	2	Information for the latest month is estimated for respondents who have not reported by the cut-off date for production of results. These estimates will be revised in future statistical releases when their reported information becomes available. Motor trade sales estimates exclude value added tax (VAT).
Purpose of the survey	3	The results of the monthly motor trade sales survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.
Scope of the survey	4	<p>The survey collects information from a sample of enterprises in South Africa that are predominantly involved in motor trade. These enterprises include:</p> <ul style="list-style-type: none"> • motor vehicle dealers, filling stations and workshops; • motor cycle dealers; • spares and accessories; • tyre dealers; • automotive electricians; • radiator repairs; • panel beaters and spray painters; • other specialised motor repair services; and • other motor trade.
Classification	5	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Each enterprise is classified to the industry which reflects its predominant activity. Statistics in this publication are presented at SIC group (four digits) level.
Response rate	6	The preliminary response rate for the survey on motor trade sales for October 2010 was 80,2%. The improved response rate for the survey on motor trade sales for September 2010 was 94,5%.
Statistical unit	7	The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its sales and service activities.
Survey methodology and design	8	The survey is conducted monthly. Questionnaires are sent to a sample of about 850 enterprises from a population of about 18 000 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-responses.
	9	The value of sales is obtained monthly from the sample of about 850 enterprises, which was drawn in April 2010 from a population then of about 18 000 motor trade enterprises. The motor trade industry is divided into four size groups. The sample is drawn at the SIC four-digit level. All large and medium enterprises (size groups one and two), are completely enumerated. Simple random sampling is applied to small enterprises (size groups three and four). The total value of sales of the large and medium enterprises (size groups one and two) per classification group is added to the weighted totals of size groups three and four to reflect the total value of sales.

Weighting methodology	10	For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form group estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at http://www.statssa.gov.za/publications/publicationsearch.asp .																				
Seasonal adjustment	11	Seasonally adjusted estimates are generated each month, using the X-11 Seasonal Adjustment Program developed by the US Bureau of the Census, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.																				
Trend cycle	12	The trend is the long-term pattern or movement of a time series. The X-11 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.																				
Reliability of estimates	13	Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the motor trade industry in South Africa. Estimates are subject to sampling and non-sampling errors.																				
	14	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.																				
Revised figures	15	Normally revised figures are due to respondents reporting revisions or corrections to their figures and late submission of their data to Stats SA. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.																				
Related publications	16	Users may also wish to refer to the following publications available from Stats SA <ul style="list-style-type: none"> • <i>Bulletin of Statistics</i> issued quarterly • <i>SA Statistics</i> issued annually 																				
Rounding-off of figures	17	Where necessary, the figures in the tables have been rounded off to the nearest digit shown.

Technical note

Neyman Optimal allocation

A stratified random sample was drawn from the population of enterprises on Stats SA’s business sampling frame (BSF). Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises. The Neyman optimal allocation formula given below was used to allocate samples to each stratum.

$$n_h = \frac{N_h S_h}{\sum N_h S_h}$$

N_h and S_h are the stratum population size and the stratum variance respectively.

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata did not exceed 5,6%.

Class limits

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	0	18 000 000
Small	3	18 000 001	85 500 000
Medium	2	85 500 001	175 500 000
Large	1	175 500 001	

Glossary

Enterprise

The enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.

Industry

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts (SNA)* in the same way as in the *Standard Industrial Classification of all Economic Activities, Fifth Edition, Report No. 09-90-02 of January 1993 (SIC)*.

Statistical unit

A statistical unit is a unit about which statistics are tabulated, compiled or published. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.

You can visit us on the internet at: www.statssa.gov.za
