## Summary findings: Motor trade sales

**Table A – Key figures as at the end of September 2007**

Estimates	September 2007 (R million)	% change between September 2006 and September 2007	% change between July to September 2006 and July to September 2007	% change between January to September 2006 and January to September 2007
<b>Motor trade sales</b>	26 298	-1,9	3,5	10,0

Seasonally adjusted estimates	September 2007 (R million)	% change between August and September 2007	% change between April to June 2007 and July to September 2007
<b>Motor trade sales</b>	25 632	-6,1	-2,1

### Key findings as at the end of September 2007

#### Motor trade sales increase

**Table A indicates that motor trade sales for the third quarter of 2007 increased by 3,5% compared with the third quarter of 2006. This is lower than the 15,7% increase reported for the third quarter of 2006 compared with the third quarter of 2005.**

The growth in the motor trade sales since April 2007 was partly affected by difficulties in the registering of new and used vehicles following the introduction of the new eNaTIS system, the new National Credit Act which was introduced on 1 June 2007, as well as tighter monetary conditions. September 2007 was negatively affected by the motor industry strike.

Seasonally adjusted motor trade sales for the third quarter of 2007 decreased by 2,1% compared with the second quarter of 2007.

As indicated in table B below, the major contributors to the 3,5% increase in motor trade sales for the third quarter of 2007 compared with the third quarter of 2006 were income from the sales of accessories (2,3 percentage points), income from fuel sales (1,8 percentage points) and used vehicle sales (1,0 percentage point). New vehicle sales and workshop income contributed negatively to the 3,5% increase (-2,1 and -0,3 percentage points respectively).

**Table B – Contribution of the types of activity to the percentage change in motor trade sales**

Type of activity	July to September 2006 (R million)	Weight 1/	July to September 2007 (R million)	Difference in sales between July to September 2006 and July to September 2007 (R million)	% change between July to September 2006 and July to September 2007	Contribution (percentage points) to the percentage change in total sales 2/
<b>New vehicle sales</b>	29 677	36,8	27 956	-1 721	-5,8	-2,1
<b>Used vehicle sales</b>	14 900	18,5	15 669	769	5,2	1,0
<b>Workshop income</b>	7 062	8,8	6 801	-261	-3,7	-0,3
<b>Income from the sales of accessories</b>	9 663	12,0	11 543	1 880	19,5	2,3
<b>Income from fuel sales</b>	15 643	19,4	17 075	1 432	9,2	1,8
<b>Income from convenience store sales</b>	3 661	4,5	4 366	705	19,3	0,9
<b>Total 3/</b>	<b>80 607</b>	<b>100,0</b>	<b>83 408</b>	<b>2 801</b>	<b>3,5</b>	<b>3,5</b>

1/ Weight is the percentage contribution of each type of activity to the total motor trade sales of July to September 2006.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of activity with the corresponding weight.

3/ The figures have been rounded off. Therefore, discrepancies may occur between the sums of the component items and totals.

Figure 1 below shows the seasonally adjusted and trend patterns for motor trade sales between January 2001 and September 2007. There was an upward movement in the trend cycle until March 2007, after which the trend cycle started to decline.

### Detailed results

Tables 1 and 2 show motor trade sales and percentage changes over the period January 2000 to September 2007. Table 3 shows seasonally adjusted motor trade sales over the same period.

1/ The type of activity in motor trade refers to the enterprises classified within the motor trade industry and engaged in the activities mentioned above.

2/ Preliminary...

3/ The figures have been rounded off. Therefore, discrepancies may occur between the sums of the component items and totals.

Tables 5.1 and 5.2 show the estimates and percentage changes in motor trade sales and seasonally adjusted estimates.

**Table 5 – Estimates and percentage changes in total motor trade sales**

**Table 5.1 – Quarterly and cumulative estimates and percentages**

Estimates	July to September 2006 (R million)	July to September 2007 (R million)	% change between July to September 2006 and July to September 2007	January to September 2006 (R million)	January to September 2007 (R million)	% change between January to September 2006 and January to September 2007
Motor trade sales	80 607	83 408	+3,5	221 348	243 525	+10,0

**Table 5.2 – Seasonally adjusted estimates with monthly and quarterly percentage change**

Seasonally adjusted estimates	August 2007 (R million)	September 2007 (R million)	% change between August and September 2007	April to June 2007 (R million)	July to September 2007 (R million)	% change between April to June 2007 and July to September 2007
Motor trade sales	27 307	25 632	-6,1	81 498	79 762	-2,1

**Explanatory notes**

<b>Introduction</b>	<b>1</b>	Statistics South Africa (Stats SA) conducts a monthly survey covering enterprises of the motor trade industry (see 3 below). This survey is based on a sample drawn from the 2007 Business Sampling Frame (BSF) that contains businesses registered for value-added tax (VAT).
	<b>2</b>	As is usual, information for the latest month has had to be estimated for respondents who have not reported by the cut-off date for production of results. These estimates will be revised in future statistical releases when their reported information become available. Motor trade sales estimates exclude value-added tax (VAT).
<b>Purpose of the survey</b>	<b>3</b>	The results of the monthly motor trade sales survey are used to compile estimates of the Gross Domestic Product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.
<b>Scope of the survey</b>	<b>4</b>	The survey collects information from a sample of enterprises in South Africa that are predominantly involved in motor trade. These enterprises include - <ul style="list-style-type: none"> <li>• motor vehicle dealers, filling stations and workshops;</li> <li>• motor cycle dealers;</li> <li>• spares and accessories;</li> <li>• tyre dealers;</li> <li>• automotive electricians;</li> <li>• radiator repairs;</li> <li>• panel beaters and spray painters;</li> <li>• other specialised motor repair services; and</li> <li>• other motor trade.</li> </ul>
<b>Classification</b>	<b>5</b>	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division (two digit) level. Each enterprise is classified to the industry, which reflects its predominant activity.
<b>Response rate</b>	<b>6</b>	The preliminary response rate for the survey on motor trade sales for September 2007 was 80,1%.
<b>Statistical unit</b>	<b>7</b>	The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.
<b>Survey methodology and design</b>	<b>8</b>	The survey is conducted monthly. Questionnaires are sent to a sample of 856 enterprises from a population of about 10 900 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-responses.
	<b>9</b>	The value of sales is obtained monthly from the sample of 856 enterprises, which was drawn in April 2007 from a population then of about 10 900 motor trade enterprises. The motor trade industry is divided into four size groups. The sample is drawn at the SIC four-digit level. All large and medium enterprises (size groups one and two), are completely enumerated. Simple random sampling is applied to size groups three and four (small) enterprises. The total value of sales of the large and medium enterprises (size groups one and two) classification group is added to the weighted totals of size groups three and four to reflect the total value of sales.

<b>Weighting methodology</b>	<b>10</b>	For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form division estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at <a href="http://www.statssa.gov.za/publications/publicationsearch.asp">http://www.statssa.gov.za/publications/publicationsearch.asp</a> .																
<b>Seasonal adjustment</b>	<b>11</b>	Seasonally adjusted estimates are generated each month, using the X-11 Seasonal Adjustment Program developed by the US Bureau of the Census, 1968. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove irregular or non-seasonal influences, which may be present in any particular month. Influences that are volatile or unsystematic can still make it difficult to interpret the movement of the series even after adjustment for seasonal variations. Therefore the month-to-month movements of seasonally adjusted estimates may not be reliable indicators of trend behaviour.																
<b>Trend cycle</b>	<b>12</b>	The trend is the long-term pattern or movement of a time series. The X-11 Seasonal Adjustment Program is used for smoothing seasonally adjusted estimates to estimates of the underlying trend cycle.																
<b>Reliability of estimates</b>	<b>13</b>	Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the motor trade industry in South Africa. Estimates are subject to sampling and non-sampling errors.																
	<b>14</b>	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.																
<b>Revised figures</b>	<b>15</b>	Revised figures are due to respondents reporting revisions or corrections to their figures and late submission of their data to Stats SA. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.																
<b>Related publications</b>	<b>16</b>	Users may also wish to refer to the following publications available from Stats SA - <ul style="list-style-type: none"> <li>• <i>Bulletin of Statistics</i> issued quarterly.</li> <li>• <i>SA Statistics</i> issued annually.</li> </ul>																
<b>Rounding of figures</b>	<b>17</b>	The figures in the tables have, where necessary, been rounded to the nearest digit shown.																
<b>Symbols and abbreviations</b>	<b>16</b>	<table border="0"> <tr> <td>GDP</td> <td>Gross Domestic Product</td> </tr> <tr> <td>ISIC</td> <td>International Standard Industrial Classification</td> </tr> <tr> <td>SIC</td> <td>Standard Industrial Classification of all Economic Activities</td> </tr> <tr> <td>SARS</td> <td>South African Revenue Service</td> </tr> <tr> <td>Stats SA</td> <td>Statistics South Africa</td> </tr> <tr> <td>VAT</td> <td>Value-added tax</td> </tr> <tr> <td>*</td> <td>Revised</td> </tr> <tr> <td>-</td> <td>Figures not available</td> </tr> </table>	GDP	Gross Domestic Product	ISIC	International Standard Industrial Classification	SIC	Standard Industrial Classification of all Economic Activities	SARS	South African Revenue Service	Stats SA	Statistics South Africa	VAT	Value-added tax	*	Revised	-	Figures not available

**Technical note**

**Neyman Optimal allocation**

Before drawing in each of the surveys the population of enterprises on the BSF was stratified. Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises. The Neyman optimal allocation formula given below was used to allocate samples to each stratum.

$$n_h = \frac{N_h S_h}{\sum N_h S_h}$$

where  $N_h$  and  $S_h$  are the stratum population size and the stratum variance, respectively.

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these surveys did not exceed 6,4%.

**Class limits**

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	0	4 000 000
Small	3	4 000 001	19 000 000
Medium	2	19 000 001	39 000 000
Large	1	39 000 001	

**Glossary**

**Enterprise**

The enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.

**Industry**

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts (SNA)* in the same way as in the *Standard Industrial Classification of all Economic Activities, Fifth Edition, Report No. 09-90-02 of May 1993 (SIC)*.

**Statistical unit**

A statistical unit is a unit about which statistics are tabulated, compiled or published. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.

## General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

## Advance release calendar

An advance release calendar is disseminated on [www.statssa.gov.za](http://www.statssa.gov.za)

## Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Nelspruit  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

## Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8390/8351/4892/8496/8095.
