Statistical release P6420

Food and beverages (Preliminary)

January 2016

This is the first statistical release presenting food and beverages income at constant prices. Income at constant prices by type of enterprise and by type of income is estimated by deflating income at current prices using the relevant components of the consumer price index for restaurants.

Embargoed until: 22 March 2016

13:00

General information	14

Income at constant 2012 prices: results for January 2016

Type of income	Aug-15	Sep-15	Oct-15	Nov-15	Dec-15	Jan-16
Food sales	2,1	2,9	-0,5	0,4	3,1	1,0
Bar sales	1,7	5,7	10,0	6,6	11,3	6,4
Other income	-1,5	-6,9	-13,3	9,0	-4,3	-12,5
Total	1,9	3,0	0,5	1,4	4,0	1,4

Table A – Year-on-year percentage change in food and beverages income at constant 2012 prices by type of income

Measured in real terms (constant 2012 prices), total income generated by the food and beverages industry increased by 1,4% in January 2016 compared with January 2015. Positive annual growth rates were recorded for bar sales (6,4%) and food sales (1,0%) – see Table A.

Table B – Year-on-year percentage change in food and beverages income at constant 2012 prices by type of enterprise

Type of enterprise	Aug-15	Sep-15	Oct-15	Nov-15	Dec-15	Jan-16
Restaurants and coffee shops	5,3	5,6	1,7	3,4	5,3	4,4
Takeaway and fast-food outlets	2,3	4,0	3,4	1,5	4,0	-2,5
Catering services	-6,9	-4,8	-8,5	-3,7	0,1	2,4
Total	1,9	3,0	0,5	1,4	4,0	1,4

In January 2016, positive annual growth rates were recorded for restaurants and coffee shops (4,4% and contributing 2,0 percentage points) and catering services (2,4% and contributing 0,4 of a percentage point) – see Tables B and 5.

Table C – Food and beverages income at constant 2012 prices for the latest three months by type of enterprise

Type of enterprise	Nov 2014 – Jan 2015 (R million)	Weight	Nov 2015 – Jan 2016 (R million)	% change between Nov 2014 – Jan 2015 and Nov 2015 – Jan 2016	Contribution (% points) to the total % change
Restaurants and coffee shops	4 841,4	45,1	5 054,6	4,4	2,0
Takeaway and fast-food outlets	4 150,0	38,6	4 199,4	1,2	0,5
Catering services	1 748,3	16,3	1 737,7	-0,6	-0,1
Total	10 739,7	100,0	10 991,7	2,3	2,3

Total income increased by 2,3% in the three months ended January 2016 compared with the three months ended January 2015. Positive contributors to this increase were:

- restaurants and coffee shops (4,4% and contributing 2,0 percentage points); and
- takeaway and fast-food outlets (1,2% and contributing 0,5 of a percentage point) see Table C.

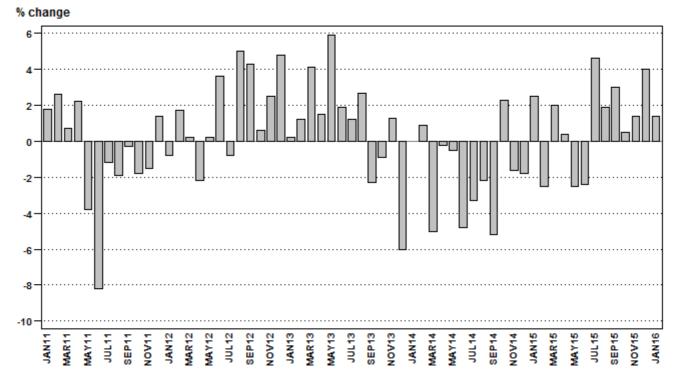

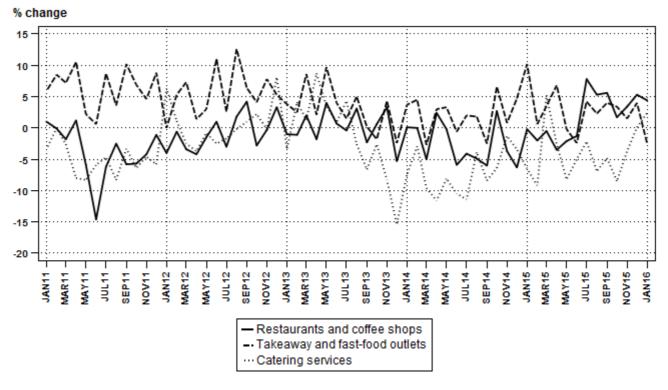

Figure 1 – Food and beverages income at constant 2012 prices: year-on-year percentage change

Figure 2 – Food and beverages income at constant 2012 prices: year-on-year percentage change by type of enterprise

PJ Lehohla Statistician-General Statistics South Africa (Stats SA) publishes monthly data for the food and beverages industry. The publication previously contained estimated income at current prices. As part of its improvement programme in economic statistics, Stats SA today introduces income at constant prices for food and beverages.

4

Income at constant 2012 prices is computed for each type of enterprise, i.e.:

- restaurants and coffee shops;
- takeaway and fast-food outlets; and
- catering services.

The relevant components of the CPI for restaurants are used to estimate income at constant 2012 prices, by type of enterprise. The steps are as follows:

- (1) Deflate food sales.
- (2) Deflate bar sales.
- (3) Deflate other income.
- (4) Compute total food and beverages income at constant 2012 prices by aggregating (1) to (3).

Survey information

Introduction The results presented in this publication are derived from the monthly survey of the food and beverages industry. This survey is based on a sample drawn from the 2015 business sampling frame (BSF) that contains businesses registered for value added tax (VAT). Purpose of the survey The food and beverages survey is a monthly survey covering a sample of public and private enterprises involved in the preparation of meals and drinks for immediate consumption in South Africa. The purpose of this survey is to monitor trends in the food and beverages industry. The results of the food and beverage survey are used to compile estimates of the tourism satellite accounts (TSA) and the gross domestic product (GDP) and its components, which are used to develop and monitor government policy. These statistics are also used in the analysis of comparative business and industry performance. Scope of the survey This survey covers the following tax registered private and public enterprises, that are mainly engaged in providing food and beverages for immediate consumption: restaurants and coffee shops; takeaway and fast-food outlets; and • catering services. **Classification by** The 1993 edition of the Standard Industrial Classification of all Economic Activities industry (SIC), Fifth Edition, Report No 09-09-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 International Standard Industrial Classification of all Economic Activities (ISIC) with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity. Statistics in this publication are presented at 5-digit SIC level. **Collection rate** The preliminary collection rate for the survey on food and beverages for January 2016 was 84,1%. The improved collection rate for December 2015 was 88,7%. Statistical unit The statistical unit for which information is compiled and published is an enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data. Revised figures are mainly due to late submission of data to Stats SA, or respondents **Revised figures** reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such. Data are edited at the enterprise level. Rounding-off of Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals. figures **Historical data** Historical food and beverages data are available on the Stats SA website. To access the data electronically, use the following link: http://www.statssa.gov.za/?page_id=1849 **Past publications** Past food and beverages releases are available on the Stats SA website. To access the releases electronically, use the following link: http://www.statssa.gov.za/?page id=1866&PPN=P6420&SCH=5705

Technical notes

Survey methodology The survey was conducted by mail, fax and telephone.

and design A sample of 941 enterprises was drawn from a population of 7 516 enterprises using stratified simple random sampling. The enterprises were first stratified at 5-digit level according to the SIC and then by size of enterprises. Large enterprises are completely enumerated. Turnover was used as the measure of size.

Class limits The enterprises are divided into four size groups according to turnover. Large enterprises are enterprises with an annual turnover of R26 million and more. The cut-off points which define the size groups, namely large, medium, small and very small enterprises are given in Table D.

Table D – Measure of size classes (Rand)

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	379 324	10 200 000
Small	3	10 200 001	12 000 000
Medium	2	12 000 001	26 000 000
Large	1	26 000 001	

Sample weighting For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-collection in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form subgroup estimates. These procedures are in line with international best practice.

Reliability of estimates Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, it may differ from the figures that would have been produced if the data had been obtained from all enterprises in the food and beverages industry in South Africa.

Relative standard error One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

 Table E – Estimate of total food and beverages industry income within 95% confidence limits – January 2016

	Lower limit (R million)	Income (R million)	Upper limit (R million) Relative stand error (RSE) %	
Total income	3 899,6	4 179,0	4 883,0	5,7

Non-sampling errors Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses.

Constant prices Food and beverages income at constant prices by type of enterprise and by type of income is estimated by deflating income at current prices using the relevant components of the consumer price index for restaurants.

Year-on-year percentage change The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.

Contribution (percentage points)	The contribution (percentage points) to the annual percentage change for any given period is calculated by multiplying the percentage change of each type of enterprise by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of enterprise to total income in the corresponding period of the previous year.			
Seasonal adjustment	Seasonally adjusted estimates will not be published until there are sufficient da points for this survey. As soon as sufficient data points are available, Stats SA w consider publishing seasonally adjusted estimates.			
Glossary				
Enterprise	A legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its activities.			
Industry	It is a group of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts</i> (SNA) in the same way as in the <i>Standard Industrial Classification of all Economic Activities, Fifth Edition;</i> Report No 09-09-02 of January 1993 (SIC).			
Income from food sales	Refers to income from the sale of meals and non-alcoholic drinks.			
Income from bar sales	Refers to income from liquor sales.			
Other income	Includes all income not earned from bar or food sales.			
Symbols and abbreviations	BSFBusiness sampling frameGDPGross domestic productSARSSouth African Revenue ServiceSICStandard Industrial Classification of all Economic ActivitiesStats SAStatistics South AfricaTSATourism satellite accountsVATValue added tax			
Restaurants and coffee shops	Enterprises involved in the sale and provision of meals and drinks, ordered from a menu, prepared on the premises for immediate consumption and with provided seating.			
Takeaway and fast-food outlets	Enterprises involved in the sale and provision of meals and drinks, ordered from a menu, prepared on the premises for takeaway purposes in a packaged format, at a stand or in a location, with or without provided seating.			
Catering services	Enterprises involved in the sale and supply of meals and drinks prepared on the premises on a contract basis and brought to other premises chosen by the person ordering them, to be served for immediate consumption to guests or customers. Catering services also include bars, taverns, other drinking places, ice-cream parlours, etc.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division National Library of South Africa, Cape Town Division Natal Society Library, Pietermaritzburg Library of Parliament, Cape Town Bloemfontein Public Library Johannesburg Public Library Eastern Cape Library Services, King William's Town Central Regional Library, Polokwane Central Reference Library, Mbombela Central Reference Collection, Kimberley Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.
