Results for July 2013

Table A – Year-on-year percentage change in food and beverages income at current prices by type of income

Type of income	Feb-13	Mar-13	Apr-13	May-13	Jun-13	Jul-13
Food sales	5,7	10,2	7,4	12,1	7,7	5,5
Bar sales	18,6	16,2	8,0	15,2	12,7	17,0
Other income	33,0	17,9	2,2	9,4	14,4	16,9
Total	7,6	11,0	7,3	12,3	8,4	6,8

Measured in nominal terms (current prices), total income generated by the food and beverages industry increased by 6,8% in July 2013 compared with July 2012. Positive annual growth rates were recorded for bar sales (17,0%), 'other' income (16,9%) and food sales (5,5%) – see Table A.

Table B – Year-on-year percentage change in food and beverages income at current prices by type of enterprise

Type of enterprise	Feb-13	Mar-13	Apr-13	May-13	Jun-13	Jul-13
Restaurants and coffee shops	5,4	8,9	4,0	10,8	7,8	5,5
Takeaway and fast-food outlets	9,1	15,9	7,8	16,1	10,8	7,8
Catering services	10,3	7,3	15,2	9,0	5,2	8,5
Total	7,6	11,0	7,3	12,3	8,4	6,8

In July 2013, positive annual growth rates were recorded for catering services (8,5% and contributing 1,5 percentage points), takeaway and fast-food outlets (7,8% and contributing 2,8 percentage points) and restaurants and coffee shops (5,5% and contributing 2,5 percentage points) – see Tables B and 5.

Table C – Food and beverages income at current prices for the latest three months by type of enterprise

Type of enterprise	May – Jul 2012 (R million)	Weight	May – Jul 2013 (R million)	% change between May – Jul 2012 and May – Jul 2013	Contribution (% points) to the total % change
Restaurants and coffee shops	4 425,9	45,6	4 779,5	8,0	3,6
Takeaway and fast-food outlets	3 492,1	35,9	3 891,7	11,4	4,1
Catering services	1 798,5	18,5	1 933,9	7,5	1,4
Total	9 716,5	100,0	10 605,1	9,1	9,1

Total income increased by 9,1% for the three months ended July 2013 compared with the three months ended July 2012. The main contributors to this increase were:

- takeaway and fast-food outlets (11,4% and contributing 4,1 percentage points); and
- restaurants and coffee shops (8,0% and contributing 3,6 percentage points) – see Table C.

Note: Changes to the monthly current indicator survey and the impact on the statistical series

Business register and samples

Today Statistics South Africa (Stats SA) publishes the results for the monthly survey of food and beverages from a new sample drawn in April 2013 which replaces the previous sample that was drawn in April 2012. The sample is drawn from a business register of enterprises with an annual turnover of at least R1 000 000 and that are required to register with the South African Revenue Service (SARS) for value added tax.

Due to the evolving nature of business, the business register has to be maintained on a continuous basis. The maintenance process is aimed, amongst other things, at capturing changes related to new businesses, ceased businesses, merged businesses and classification changes. In addition, Stats SA undertakes quality improvement surveys related to the business register, the primary objective of which is to capture up-to-date information about the structures and activities of large and complex businesses. This process enables Stats SA to review classification codes stored for these businesses. These changes are an essential part of the statistical architecture.

Comparison of total income between the previous and new samples of the food and beverages industry

The reported level of food sales for the monthly survey of food and beverages for the months April to June 2013 based on the new sample was 10,5% lower than the level of food sales from the previous sample (see Table D and Figure 3).

Table D – Total food sales for the previous and new samples for April to June 2013

Food and beverages industry	Previous sample (R million)	New sample (R million)	Difference (R million)	Difference 1/ (%)
Food sales	10 263,7	9 188,6	-1 075,1	-10,5
Total income	11 640,6	10 508,6	-1 132,0	-9,7

1/ The percentage difference is the difference between the April to June 2013 income as recorded in the new sample divided by the April to June 2013 income as recorded in the previous sample, expressed as a percentage.

Figure 3 – Food sales: monthly levels of previous and new samples for April to June 2013

The reported level of total income for the monthly survey of food and beverages for the months April to June 2013 based on the new sample was 9,7% lower than the level of total income from the previous sample (see Table D on page 5 and Figure 4).

Figure 4 – Total income: monthly levels of previous and new samples for April to June 2013

Table E – Total income for the previous and new samples by type of enterprise for April to June 2013

Type of enterprise	Previous sample (R million)	New sample (R million)	Difference (R million)	Difference 1/ (%)
Restaurants and coffee shops	5 401,6	4 750,5	-651,1	-12,1
Takeaway and fast-food outlets	4 232,3	3 817,9	-414,4	-9,8
Catering services	2 006,7	1 940,2	-66,5	-3,3
Total	11 640,6	10 508,6	-1 132,0	-9,7

1/ The percentage difference is the difference between the April to June 2013 income as recorded in the new sample divided by the April to June 2013 income as recorded in the previous sample, expressed as a percentage.

The largest percentage differences in total income between the previous and new samples were in the following types of enterprises:

- restaurants and coffee shops (-12,1% or -R651,1 million); and
- takeaway and fast-food outlets (-9,8% or -R414,4 million).

Table F – Total income for the previous and new samples by type of income for April to June 2013

Type of income	Previous sample (R million)	New sample (R million)	Difference (R million)	Difference 1/ (%)
Food sales	10 263,7	9 188,6	-1 075,1	-10,5
Bar sales	1 183,9	1 107,9	-76,0	-6,4
Other income	193,0	212,1	19,1	9,9
Total income	11 640,6	10 508,6	-1 132,0	-9,7

1/ The percentage difference is the difference between the April to June 2013 income as recorded in the new sample divided by the April to June 2013 income as recorded in the previous sample, expressed as a percentage.

The largest percentage differences in total income between the previous and new samples were in the following types of income:

- food sales (-10,5% or -R1 075,1 million); and
- 'other' income (9,9% or R19,1 million).

Various data quality improvements account for these differences, for example the reclassification of enterprises from one industry to another.

Backcasting

In order to assist users of time series, the levels of the previous sample have been adjusted from August 2005 up to March 2013, using the ratio between the new and previous sample estimates for April to June 2013.

Survey information

Introduction	The results presented in this publication are derived from the monthly survey of the food and beverages industry. This survey is based on a sample drawn from the 2013 business sampling frame (BSF) that contains businesses registered for value added tax (VAT).
Purpose of the survey	<p>The food and beverages survey is a monthly survey covering a sample of public and private enterprises involved in the preparation of meals and drinks for immediate consumption in South Africa. The purpose of this survey is to monitor trends in the food and beverages industry.</p> <p>The results of the food and beverage survey are used to compile estimates of the tourism satellite accounts (TSA) and the gross domestic product (GDP) and its components, which are used to develop and monitor government policy. These statistics are also used in the analysis of comparative business and industry performance.</p>
Scope of the survey	<p>This survey covers the following tax registered private and public enterprises, that are mainly engaged in providing food and beverages for immediate consumption:</p> <ul style="list-style-type: none"> • restaurants and coffee shops; • takeaway and fast-food outlets; and • catering services.
Classification by industry	The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i> , Fifth Edition, Report No 09-09-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Each enterprise is classified to an industry which reflects its predominant activity. Statistics in this publication are presented at 5-digit SIC level.
Collection rate	The preliminary collection rate for the survey on food and beverages for July 2013 was 86,0%.
Statistical unit	The statistical unit for which information is compiled and published is an enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.
Revised figures	Revised figures are mainly due to late submission of data to Stats SA, or respondents reporting revisions or corrections to their figures. Preliminary figures, as indicated in the relevant tables, are subject to change and when revised will not be indicated as such. Data are edited at the enterprise level.
Rounding-off of figures	Where figures have been rounded off, discrepancies may occur between sums of the component items and the totals.
Historical data	Historical food and beverages data are available on the Stats SA webpage. To access the data electronically, use the following link: http://www.statssa.gov.za/timeseriesdata/timeseriesdata.asp
Past publications	Past food and beverages releases are available on the Stats SA webpage. To access the releases electronically, use the following link: http://www.statssa.gov.za/publications/statspastfuture.asp?PPN=P6420&SCH=
Changes in this publication	<p>The results published today are based on a new sample drawn in April 2013. The periodic introduction of a new sample is part of Stats SA's strategic approach in improving the basis on which surveys are conducted.</p> <p>The new sample was conducted in parallel with the previous sample for April to June 2013. A comparison of total income between the new and previous sample shows 9,7% lower level for the new sample.</p>

Technical notes

Survey methodology and design

The survey was conducted by mail, fax and telephone.

A sample of about 900 enterprises was drawn from a population of about 8 100 enterprises using stratified simple random sampling. The enterprises were first stratified at 5-digit level according to the SIC and then by size of enterprises. Large enterprises are completely enumerated. Turnover was used as the measure of size.

Class limits

The enterprises are divided into four size groups according to turnover. Large enterprises are enterprises with an annual turnover of R26 million and more. The cut-off points which define the size groups, namely large, medium, small and very small enterprises are given in Table G.

Table G – Measure of size classes (Rand)

Enterprise size	Size group	Lower limits	Upper limits
Very small	4	0	10 200 000
Small	3	10 200 001	12 000 000
Medium	2	12 000 001	26 000 000
Large	1	26 000 001	

Sample weighting

For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-collection in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form subgroup estimates. These procedures are in line with international best practice.

Reliability of estimates

Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, it may differ from the figures that would have been produced if the data had been obtained from all enterprises in the food and beverages industry in South Africa.

Relative standard error

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of enterprises was used. The relative standard error (RSE) provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer to the size of the estimate.

Table H – Estimate of total food and beverages industry income within 95% confidence limits – July 2013

	Lower limit (R million)	Income (R million)	Upper limit (R million)	Relative standard error (RSE) %
Total income	3 253,2	3 533,7	3 814,4	4,1

Non-sampling errors

Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Non-sampling errors occur in both sample surveys and censuses.

Year-on-year percentage change

The year-on-year percentage change in a variable for any given period is the change between that period and the corresponding period of the previous year, expressed as a percentage of the latter.

Contribution (percentage points)	The contribution (percentage points) to the annual percentage change for any given period is calculated by multiplying the percentage change of each type of enterprise by its corresponding weight, divided by 100. The weight is the percentage contribution of each type of enterprise to total income in the corresponding period of the previous year.														
Seasonal adjustment	Seasonally adjusted estimates will not be published until there are sufficient data points for this survey. As soon as sufficient data points are available, Stats SA will consider publishing seasonally adjusted estimates.														
Glossary															
Enterprise	A legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its activities.														
Industry	It is a group of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the <i>System of National Accounts (SNA)</i> in the same way as in the <i>Standard Industrial Classification of all Economic Activities, Fifth Edition; Report No 09-09-02 of April 1993 (SIC)</i> .														
Income from food sales	Refers to income from the sale of meals and non-alcoholic drinks.														
Income from bar sales	Refers to income from liquor sales.														
Other income	Includes all income not earned from bar or food sales.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
