## Summary of findings: Land transportation

**Table A – Key figures for November 2012**

Freight transportation estimates	November 2012 1/	% change between November 2011 and November 2012	% change between September to November 2011 and September to November 2012	% change between January to November 2011 and January to November 2012
<b>Payload (000 tons)</b>	65 076	3,8	-2,5	2,1
<b>Total income (R million)</b>	9 110	9,9	4,0	6,8

1/ Units of measurement can be found next to the respective variables in the previous column.

Passenger transportation estimates	November 2012 1/	% change between November 2011 and November 2012	% change between September to November 2011 and September to November 2012	% change between January to November 2011 and January to November 2012
<b>Number of passengers (000)</b>	74 308	-0,2	1,2	5,2
<b>Total income (R million)</b>	821	14,3	14,9	12,4

1/ Units of measurement can be found next to the respective variables in the previous column.

### Freight transportation

The volume of goods transported (payload) increased by 3,8% in November 2012 compared with November 2011. The corresponding income increased by 9,9% over the same period.

Income from freight transportation increased by 4,0% in the three months ended November 2012 compared with the three months ended November 2011. The main contributors to this increase were:

- primary mining and quarrying products (6,3% and contributing 2,0 percentage points); and
- manufactured food, beverages and tobacco products (9,3% and contributing 1,3 percentage points) – see Table B on page 3.

### Passenger transportation

The number of passengers transported decreased by 0,2% in November 2012 compared with November 2011. The corresponding income increased by 14,3% over the same period.

Income from passenger transportation increased by 14,9% in the three months ended November 2012 compared with the three months ended November 2011. Income from passenger transportation by road increased by 13,7% (contributing 10,4 percentage points), and income from passenger transportation by rail increased by 19,1% (contributing 4,5 percentage points) – see Table C on page 3.

**Table B – Contribution of each type of commodity to the percentage change in freight transportation income**

Type of commodity	September to November 2011 (R million)	Weight 1/	September to November 2012 (R million)	Difference in income between September to November 2011 and September to November 2012 (R million)	% change between September to November 2011 and September to November 2012	Contribution (% points) to the % change in total income 2/
Agriculture and forestry primary products	1 875	7,7	1 661	-214	-11,4	-0,9
Primary mining and quarrying products	7 804	31,9	8 295	491	6,3	2,0
Manufactured food, beverages and tobacco products	3 316	13,6	3 624	308	9,3	1,3
Textiles, clothing and leather goods	322	1,3	251	-71	-22,0	-0,3
Chemicals, coke, petroleum, rubber, plastic and other mineral products	1 945	8,0	2 036	91	4,7	0,4
Basic metals and fabricated metal products	1 343	5,5	1 368	25	1,9	0,1
Non-metallic products	963	3,9	906	-57	-5,9	-0,2
Electrical machinery, transport machinery and equipment	641	2,6	690	49	7,6	0,2
Motor vehicles, parts and accessories	663	2,7	747	84	12,7	0,3
Paper and paper products	441	1,8	432	-9	-2,0	0,0
Commercial products	803	3,3	766	-37	-4,6	-0,2
Used household and office products	183	0,7	201	18	9,8	0,1
Containers	1 223	5,0	1 276	53	4,3	0,2
Parcels	446	1,8	554	108	24,2	0,4
Other freight	2 472	10,1	2 602	130	5,3	0,5
<b>Total income 3/</b>	<b>24 441</b>	<b>100,0</b>	<b>25 409</b>	<b>968</b>	<b>4,0</b>	<b>4,0</b>

1/ Weight is the percentage contribution of each type of commodity to the total income for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of commodity with its corresponding weight, divided by 100.

3/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

**Table C – Contribution of each type of service to the percentage change in passenger transportation income**

Type of service	September to November 2011 (R million)	Weight 1/	September to November 2012 (R million)	Difference in income between September to November 2011 and September to November 2012 (R million)	% change between September to November 2011 and September to November 2012	Contribution (% points) to the % change in total income 2/
Rail passenger transportation	518	23,6	617	99	19,1	4,5
Road passenger transportation	1 676	76,4	1 905	229	13,7	10,4
<b>Total income 3/</b>	<b>2 194</b>	<b>100,0</b>	<b>2 522</b>	<b>328</b>	<b>14,9</b>	<b>14,9</b>

1/ Weight is the percentage contribution of each type of service to the total income for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of service with its corresponding weight, divided by 100.

3/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

1/ Preliminary.

2/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

**Description of type of commodity included in indicated group type in Table 3**

Group type	Type of commodity included in group type	Group type	Type of commodity included in group type
Type A	Transportation of agriculture and forestry primary products	Type I	Transportation of motor vehicles, parts and accessories
Type B	Transportation of primary mining and quarrying products	Type J	Transportation of paper and paper products
Type C	Transportation of manufactured food, beverages and tobacco products	Type K	Transportation of commercial products
Type D	Transportation of textiles, clothing and leather products	Type L	Transportation of used household and office products
Type E	Transportation of chemicals, coke, petroleum, rubber, plastic and other mineral products	Type M	Transportation of containers
Type F	Transportation of basic metals and fabricated metal products	Type N	Transportation of parcels
Type G	Transportation of non-metallic products	Type O	Transportation of other freight
Type H	Transportation of electrical machinery, transport machinery and equipment		

**Table 4 – Three-monthly and annual cumulative estimates and percentage changes for freight transportation**

Freight transportation estimates	September to November 2011	September to November 2012	% change between September to November 2011 and September to November 2012	January to November 2011	January to November 2012	% change between January to November 2011 and January to November 2012
<b>Payload (000 tons)</b>	185 924	181 315	-2,5	625 712	638 644	2,1
<b>Total income (R million)</b>	24 441	25 409	4,0	81 299	86 802	6,8

**Table 5 – Three-monthly and annual cumulative estimates and percentage changes for passenger transportation**

Passenger transportation estimates	September to November 2011	September to November 2012	% change between September to November 2011 and September to November 2012	January to November 2011	January to November 2012	% change between January to November 2011 and January to November 2012
<b>Number of passengers (000)</b>	223 471	226 177	1,2	757 184	796 551	5,2
<b>Total income (R million)</b>	2 194	2 522	14,9	7 659	8 606	12,4

## Explanatory notes

<b>Introduction</b>	1	<p>Statistics South Africa (Stats SA) conducts a monthly survey of the land transportation industry, covering passenger and freight transportation by rail and road (see 4 below). This survey is based on a sample drawn from the 2012 Business Sampling Frame (BSF) that contains businesses registered for value added tax (VAT) and income tax.</p>
	2	<p>As is usual, information for the latest month had to be estimated for respondents who have not reported by the cut-off date for production of results. These estimates will be revised in future statistical releases when their reported information becomes available. Published land transportation income estimates exclude VAT.</p>
<b>Purpose of the survey</b>	3	<p>The results of the monthly land transport survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.</p>
<b>Scope of the survey</b>	4	<p>This survey covers enterprises involved in land transportation according to the following types of transportation:</p> <ul style="list-style-type: none"> <li>• railway transport (including passenger and freight transportation);</li> <li>• other scheduled passenger land transport – urban, suburban and inter-urban bus and coach passenger lines and school buses;</li> <li>• other non-scheduled passenger land transport – safaris and sightseeing bus tours, metered taxis and other passenger transport including renting of motor cars with drivers; and</li> <li>• freight transport by road.</li> </ul>
<b>Exclusions</b>	5	<p>Passenger transportation excludes:</p> <ul style="list-style-type: none"> <li>• minibus taxis;</li> <li>• Gautrain;</li> <li>• metropolitan buses (including the Bus Rapid Transport system– BRT); and</li> <li>• rental of private cars/buses without drivers.</li> </ul> <p>Freight transportation excludes:</p> <ul style="list-style-type: none"> <li>• renting of trucks without drivers; and</li> <li>• in-house transportation.</li> </ul>
<b>Classification</b>	6	<p>The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i>, Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division (two-digit) level. Each enterprise is classified to the industry which reflects its predominant activity.</p>
<b>Collection rate</b>	7	<p>The preliminary collection rate for the survey on land transportation for November 2012 was 78,4%. The improved collection rate for October 2012 was 88,4%.</p>
<b>Statistical unit</b>	8	<p>The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities.</p>
<b>Survey methodology and design</b>	9	<p>Questionnaires are collected monthly and the results are published on a monthly basis. Questionnaires are sent to a sample of 700 enterprises from a population of about 4 000 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-respondents.</p>

<b>Sample design</b>	<b>10</b>	The value of income is obtained monthly from the sample of 700 enterprises (which was drawn in April 2012 at the SIC four-digit level) from a population of about 4 000 land transportation enterprises. The land transportation industry is divided into four size groups. All large enterprises (size group one) are completely enumerated. Simple random sampling is applied to size groups two (medium sized), three and four (small) enterprises. The total value of income of the large enterprises (size group one) is added to the weighted totals of size groups two, three and four to reflect the total value of income.																				
<b>Weighting methodology</b>	<b>11</b>	For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form division estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at <a href="http://www.statssa.gov.za/publications/publicationsearch.asp">http://www.statssa.gov.za/publications/publicationsearch.asp</a> .																				
<b>Reliability of estimates</b>	<b>12</b>	Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the land transport industry in South Africa. Estimates are subject to sampling and non-sampling errors. Preliminary figures are indicated in the tables.																				
	<b>13</b>	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.																				
<b>Revised figures</b>	<b>14</b>	Revised figures are due to respondents reporting revisions or corrections to their figures and late submission of their data to Stats SA. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.																				
<b>Related publications</b>	<b>15</b>	Users may also wish to refer to the following publications available from Stats SA - <ul style="list-style-type: none"> <li>• <i>Bulletin of Statistics</i> issued quarterly; and</li> <li>• <i>SA Statistics</i> issued annually.</li> </ul>																				
<b>Rounding-off of figures</b>	<b>16</b>	Where figures have been rounded off discrepancies may occur between sums of the component items and the totals.

**Technical note**

**Neyman optimal allocation**

A stratified random sample was drawn from the population of enterprises on the business sampling frame (BSF). Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises. The Neyman optimal allocation formula given below was used to allocate samples to each stratum.

$$n_h = \frac{N_h S_h}{\sum N_h S_h}$$

$N_h$  and  $S_h$  are the stratum population size and the stratum variance respectively.

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata did not exceed 0,8%.

**Class limits (Rand)**

Enterprise size	Size Group	Lower limits	Upper limits
Very small	4	0	9 000 000
Small	3	9 000 001	39 000 000
Medium	2	39 000 001	78 000 000
Large	1	78 000 001	

**Glossary**

**Enterprise**

The enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.

**Industry**

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts (SNA)* in the same way as in the *Standard Industrial Classification of all Economic Activities, Fifth Edition, Report No. 09-90-02 of January 1993 (SIC)*.

**Statistical unit**

A statistical unit is a unit about which statistics are tabulated, compiled or published. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.

**Number of passengers**

The number of passengers refers to the passenger journeys.

## General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data: and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

## Advanced release calendar

An advanced release calendar is disseminated on [www.statssa.gov.za](http://www.statssa.gov.za)

## Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division  
National Library of South Africa, Cape Town Division  
Natal Society Library, Pietermaritzburg  
Library of Parliament, Cape Town  
Bloemfontein Public Library  
Johannesburg Public Library  
Eastern Cape Library Services, King William's Town  
Central Regional Library, Polokwane  
Central Reference Library, Nelspruit  
Central Reference Collection, Kimberley  
Central Reference Library, Mmabatho

Stats SA also provides a subscription service.

## Electronic services

A large range of data is available via online services. For more detail about our electronic services, contact Stats SA's user information service at (012) 310 8600.

You can visit us on the Internet at: [www.statssa.gov.za](http://www.statssa.gov.za)
