General information..... 12

Summary of findings: Land transportation

Table A – Key figures for September 2010

Freight transportation estimates	September 2010 1/	% change between September 2009 and September 2010	% change between July to September 2009 and July to September 2010	% change between January to September 2009 and January to September 2010
Payload (000 tons)	55 162	2,7	4,4	4,4
Total income (R million)	6 365	6,7	10,1	10,2

1/ Units of measurement can be found next to the respective variables in the previous column.

Passenger transportation estimates	September 2010 1/	% change between September 2009 and September 2010	% change between July to September 2009 and July to September 2010	% change between January to September 2009 and January to September 2010
Number of passengers (000)	68 856	-11,8	-13,6	-13,1
Total income (R million)	676	10,5	10,0	5,2

1/ Units of measurement can be found next to the respective variables in the previous column.

Income from freight transportation

The income from freight transportation for the third quarter of 2010 increased by 10,1% compared with the third quarter of 2009. Income from freight transportation for September 2010 increased by 6,7% compared with September 2009. The volume of goods transported (payload) for September 2010 increased by 2,7% compared with September 2009.

The increase of 10,1% in income from freight transportation for the third quarter of 2010 compared with the third quarter of 2009 was driven largely by primary mining and quarrying products (17,6% and contributing 4,9 percentage points), basic metals and fabricated metal products (31,8% and contributing 1,7 percentage points) and containers (28,9% and contributing 1,0 percentage point) – see Table B on page 3.

Income from passenger transportation

The income from passenger transportation for the third quarter of 2010 increased by 10,0% compared with the third quarter of 2009. Income from passenger transportation for September 2010 increased by 10,5% compared with September 2009. The number of passengers for September 2010 decreased by 11,8% compared with September 2009.

The main contributor to the increase of 10,0% in income from passenger transportation for the third quarter of 2010 compared with the third quarter of 2009 was road passenger transportation (14,8% and contributing 11,0 percentage points). However, this increase was counteracted by a decrease in railway passenger transportation (-4,1% and contributing -1,1 percentage points) – see Table C on page 3.

Table B – Contribution of each type of commodity to the percentage change in freight transportation income

Type of commodity	July to September 2009 (R million)	Weight 1/	July to September 2010 (R million)	Difference in income between July to September 2009 and July to September 2010 (R million)	% change between July to September 2009 and July to September 2010	Contribution (percentage points) to the % change in total income 2/
Agriculture and forestry primary products	1 655	9,4	1 815	160	9,7	0,9
Primary mining and quarrying products	4 921	28,1	5 786	865	17,6	4,9
Manufactured food, beverages and tobacco products	2 757	15,7	2 773	16	0,6	0,1
Textiles, clothing and leather goods	355	2,0	225	-130	-36,6	-0,7
Chemicals, coke, petroleum, rubber, plastic and other mineral products	1 798	10,3	1 715	-83	-4,6	-0,5
Basic metals and fabricated metal products	952	5,4	1 255	303	31,8	1,7
Non-metallic products	676	3,9	720	44	6,5	0,3
Electrical machinery, transport machinery and equipment	300	1,7	377	77	25,7	0,4
Motor vehicles, parts and accessories	320	1,8	416	96	30,0	0,5
Paper and paper products	330	1,9	355	25	7,6	0,1
Commercial products	409	2,3	531	122	29,8	0,7
Used household and office products	190	1,1	212	22	11,6	0,1
Containers	602	3,4	776	174	28,9	1,0
Parcels	191	1,1	223	32	16,8	0,2
Other freight	2 070	11,8	2 123	53	2,6	0,3
Total income 3/	17 531	100,0	19 301	1 770	10,1	10,1

1/ Weight is the percentage contribution of each type of commodity to the total income for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of commodity with its corresponding weight, divided by 100.

3/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

Table C – Contribution of each type of service to the percentage change in passenger transportation income

Type of service	July to September 2009 (R million)	Weight 1/	July to September 2010 (R million)	Difference in income between July to September 2009 and July to September 2010 (R million)	% change between July to September 2009 and July to September 2010	Contribution (percentage points) to the % change in total income 2/
Railway passenger transportation	467	25,7	448	-19	-4,1	-1,1
Road passenger transportation	1 349	74,3	1 549	200	14,8	11,0
Total income 3/	1 816	100,0	1 997	181	10,0	10,0

1/ Weight is the percentage contribution of each type of service to the total income for the three months up to the current month of the previous year.

2/ The contribution to the percentage change is calculated by multiplying the percentage change of each type of service with its corresponding weight, divided by 100.

3/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

PJ Lehohla
Statistician-General

Detailed results

Table 1 shows freight transportation estimates for the period January 2008 – September 2010.

1/ 2009 and 2010 figures are preliminary.

2/ The figures have been rounded off. Therefore discrepancies may occur between the sums of the component items and the totals.

Description of type of commodity included in indicated group type in Table 3

Group type	Type of commodity included in group type
Type A	Transportation of agriculture and forestry primary products
Type B	Transportation of primary mining and quarrying products
Type C	Transportation of manufactured food, beverages and tobacco products
Type D	Transportation of textiles, clothing and leather products
Type E	Transportation of chemicals, coke, petroleum, rubber, plastic and other mineral products
Type F	Transportation of basic metals and fabricated metal products
Type G	Transportation of non-metallic products
Type H	Transportation of electrical machinery, transport machinery and equipment
Type I	Transportation of motor vehicles, parts and accessories
Type J	Transportation of paper and paper products
Type K	Transportation of commercial products
Type L	Transportation of used household and office products
Type M	Transportation of containers
Type N	Transportation of parcels
Type O	Transportation of other freight

Estimates and percentage changes in land transportation

Outlined below in Tables 4.1 and 4.2 are the estimates and percentage changes in freight and passenger transportation.

Table 4.1 – Quarterly and annual cumulative estimates and percentage changes for freight transportation

Freight transportation estimates	July to September 2009	July to September 2010	% change between July to September 2009 and July to September 2010	January to September 2009	January to September 2010	% change between January to September 2009 and January to September 2010
Payload (000 tons)	157 949	164 974	4,4	454 182	474 161	4,4
Total income (R million)	17 531	19 301	10,1	49 824	54 888	10,2

Table 4.2 – Quarterly and annual cumulative estimates and percentage changes for passenger transportation

Passenger transportation estimates	July to September 2009	July to September 2010	% change between July to September 2009 and July to September 2010	January to September 2009	January to September 2010	% change between January to September 2009 and January to September 2010
Number of passengers (000)	234 140	202 308	-13,6	704 518	612 317	-13,1
Total income (R million)	1 816	1 997	10,0	5 359	5 635	5,2

Explanatory notes

Introduction	1	<p>Statistics South Africa (Stats SA) conducts a monthly survey of the land transportation industry, covering passenger and freight transportation by rail and road (see 4 below). This survey is based on a sample drawn from the 2010 Business Sampling Frame (BSF) that contains businesses registered for value added tax (VAT).</p> <p>As is usual, information for the latest month had to be estimated for respondents who have not reported by the cut-off date for production of results. These estimates will be revised in future statistical releases when their reported information becomes available. Published land transportation income estimates exclude VAT.</p>
Purpose of the survey	3	<p>The results of the monthly land transport survey are used to compile estimates of the gross domestic product (GDP) and its components, which are used in monitoring the state of the economy and formulation of economic policy. These statistics are also used in the analysis of comparative business and industry performance.</p>
Scope of the survey	4	<p>This survey covers enterprises involved in land transportation according to the following types of transportation:</p> <ul style="list-style-type: none"> • Railway transport (including passenger and freight transportation); • Other scheduled passenger land transport – urban, suburban and inter-urban bus and coach passenger lines and school buses; • Other non-scheduled passenger land transport – safaris and sightseeing bus tours, metered taxis and other passenger transport including renting of motor cars with drivers; and • Freight transport by road.
Exclusions	5	<p>Passenger transportation excludes:</p> <ul style="list-style-type: none"> • Minibus taxis; • Gautrain; • Metropolitan buses (including the Bus Rapid System – BRT); and • Rental of private cars/buses without drivers. <p>Freight transportation excludes:</p> <ul style="list-style-type: none"> • Renting of trucks without drivers; and • In-house transportation.
Classification	6	<p>The 1993 edition of the <i>Standard Industrial Classification of all Economic Activities (SIC)</i>, Fifth Edition, Report No. 09-90-02, was used to classify the statistical units in the survey. The SIC is based on the 1990 <i>International Standard Industrial Classification of all Economic Activities (ISIC)</i> with suitable adaptations for local conditions. Statistics in this publication are presented at SIC division (two-digit) level. Each enterprise is classified to the industry which reflects its predominant activity.</p>
Response rate	7	<p>The preliminary response rate for the survey on land transportation for September 2010 was 95,6%. The improved response rate for August 2010 was 98,3%.</p>
Statistical unit	8	<p>The statistical unit for which information is compiled and published is the enterprise, defined as a legal unit or a combination of legal units that includes and directly controls all functions necessary to carry out its income activities.</p>
Survey methodology and design	9	<p>Questionnaires are collected monthly and the results are published on a monthly basis. Questionnaires are sent to a sample of about 700 enterprises from a population of about 4 400 enterprises. Completed questionnaires are required to be returned to Stats SA within 10 days after the end of the reference month. Fax and telephone reminders are used to follow up non-respondents.</p>

Sample design	10	The value of income is obtained monthly from the sample of about 700 enterprises (which was drawn in April 2010 at the SIC four-digit level) from a population of about 4 400 land transportation enterprises. The land transportation industry is divided into four size groups. All large enterprises (size group one) are completely enumerated. Simple random sampling is applied to size groups two (medium sized), three and four (small) enterprises. The total value of income of the large enterprises (size group one) is added to the weighted totals of size groups two, three and four to reflect the total value of income.																				
Weighting methodology	11	For those strata not completely enumerated, the weights to produce estimates are the inverse ratio of the sampling fraction, modified to take account of non-response in the survey. Stratum estimates are calculated and then aggregated with the completely enumerated stratum to form division estimates. These procedures, which are in line with international best practice, are described in more detail on the Stats SA website at http://www.statssa.gov.za/publications/publicationsearch.asp .																				
Reliability of estimates	12	Data presented in this publication are based on information obtained from a sample and are, therefore, subject to sampling variability; that is, they may differ from the figures that would have been produced if the data had been obtained from all enterprises in the land transport industry in South Africa. Estimates are subject to sampling and non-sampling errors. Preliminary figures are indicated in the tables.																				
	13	Inaccuracies may occur because of imperfections in reporting by enterprises and errors made in the collection and processing of the data. Inaccuracies of this kind are referred to as non-sampling errors. Every effort is made to minimise non-sampling errors by careful design of questionnaires, testing them in pilot studies, editing reported data and implementing efficient operating procedures. Fluctuations may occur in consecutive months as a result of seasonal and economic factors.																				
Revised figures	14	Revised figures are due to respondents reporting revisions or corrections to their figures and late submission of their data to Stats SA. Preliminary figures are indicated in the relevant tables. Data are edited at the enterprise level.																				
Related publications	15	Users may also wish to refer to the following publications available from Stats SA - <ul style="list-style-type: none"> • <i>Bulletin of Statistics</i> issued quarterly; and • <i>SA Statistics</i> issued annually. 																				
Rounding-off of figures	16	Where figures have been rounded off discrepancies may occur between sums of the component items and the totals.																				
Pre-release policy	17	Stats SA's pre-release policy may be inspected at its website, www.statssa.gov.za .

Technical note

Neyman optimal allocation

A stratified random sample was drawn from the population of enterprises on the business sampling frame (BSF). Strata were formed using a combination of Standard Industrial Classification and the measure of size classes for enterprises. The Neyman optimal allocation formula given below was used to allocate samples to each stratum.

$$n_h = \frac{N_h S_h}{\sum N_h S_h}$$

N_h and S_h are the stratum population size and the stratum variance respectively.

Neyman allocation formula not only allocates sample sizes to each stratum but also calculates the relative precision for each stratum as well as the relative precision for all strata. The relative precision for these strata did not exceed 1,0%.

Class limits

Enterprise size	Size Group	Lower limits	Upper limits
Very small	4	0	9 000 000
Small	3	9 000 001	39 000 000
Medium	2	39 000 001	78 000 000
Large	1	78 000 001	

Glossary

Enterprise

The enterprise is a legal entity or a combination of legal units that includes and directly controls all functions necessary to carry out its sales activities.

Industry

An industry is made up of enterprises engaged in the same or similar kinds of economic activity. Industries are defined in the *System of National Accounts (SNA)* in the same way as in the *Standard Industrial Classification of all Economic Activities, Fifth Edition, Report No. 09-90-02 of January 1993 (SIC)*.

Statistical unit

A statistical unit is a unit about which statistics are tabulated, compiled or published. The statistical units are derived from and linked to the South African Revenue Service (SARS) administrative data.

Number of passengers

The number of passengers refers to the passenger journeys.

General information

Stats SA publishes approximately 300 different statistical releases each year. It is not economically viable to produce them in more than one of South Africa's eleven official languages. Since the releases are used extensively, not only locally but also by international economic and social-scientific communities, Stats SA releases are published in English only.

Stats SA has copyright on this publication. Users may apply the information as they wish, provided that they acknowledge Stats SA as the source of the basic data wherever they process, apply, utilise, publish or distribute the data; and also that they specify that the relevant application and analysis (where applicable) result from their own processing of the data.

Advance release calendar

An advance release calendar is disseminated on www.statssa.gov.za

Stats SA products

A complete set of Stats SA publications is available at the Stats SA Library and the following libraries:

National Library of South Africa, Pretoria Division
National Library of South Africa, Cape Town Division
Natal Society Library, Pietermaritzburg
Library of Parliament, Cape Town
Bloemfontein Public Library
Johannesburg Public Library
Eastern Cape Library Services, King William's Town
Central Regional Library, Polokwane
Central Reference Library, Nelspruit
Central Reference Collection, Kimberley
Central Reference Library, Mmabatho
Stats SA also provides a subscription service.

Electronic services

A large range of data are available via on-line services, diskette and computer printouts. For more details about our electronic data services, contact (012) 310 8600/8423/8351/4892/8496/8095.

You can visit us on the internet at: www.statssa.gov.za
