## PREFACE

This report forms part of a series of publications generated from the recently conducted Census 2022. It is the third volume following on the provincial profiles based on Census 2011 and Community Survey 2016. The report has been compiled for each of the nine provinces to profile the uniqueness of each province in terms of population dynamics, socio-economic development, and progress in addressing challenges relating to access to basic services. This report profiles indicators for KwaZulu-Natal province.

The report provides statistics disaggregated at the municipal level based on the 2021 municipal boundaries. All indicators where Census 2022 data have been compared with other censuses, data for the latter were aligned to the 2021 municipal boundaries. The publication profiles various themes, including population characteristics, demographics, education, migration, disability prevalence and access to basic services.

## **CHAPTER 1: INTRODUCTION**

### **1.1 Background**

KwaZulu-Natal is the second most populated province in South Africa with a population of about 12,4 million. The province shares international borders with Eswatini, Mozambique and Lesotho. The province is known to have produced some of the great Zulu kings, notably; Shaka ka Senzangakhona, Dingane, Cetshwayo and many others. The province is home to the largest number of the Indian/Asian population outside of India. The most spoken language in the province is IsiZulu, followed by English.

The province contributes about 16% to the GDP of the country<sup>1</sup>. Durban, also known as Africa's playground, is well known for its warm weather and pristine beaches. Tourist destinations in the province include the uShaka Marine World, the Drakensberg mountains and the Moses Mabhida stadium. Durban serves as the main cargo port in the country and it provides services to much of the interior of Southern Africa.

### **1.2 How the count was done**

In South Africa, once in ten years, the census presents an opportunity for the country to obtain data on key population, household and demographic indicators such as population size, age and sex structure, and geographical distribution across the country. Population and housing censuses provide the population denominators for several socioeconomic, health and other indicators and renew the basis for revising population estimates and projections for another ten years, and beyond. Censuses provide data at various levels of planning, essential in assisting the country and global monitoring development programs. Census data are fundamental for informed planning, policy formulation and decision-making in various sectors as nations address socio-economic and service delivery challenges. This includes building and maintaining critical infrastructure such as hospitals and schools. The census data is also critical in determining budgetary allocations for various spheres of government.

In the Census 2022 planning phase, project goals and objectives were outlined and the strategic direction of conducting a digital census was defined ensuring that all dependencies

---

<sup>1</sup> Statistics South Africa (2023). *Provincial Gross Domestic Product: Experimental Estimates, 2022*. Available at <https://www.statssa.gov.za/publications/D04411/D044112022.pdf>

between the different phases and role players were identified, potential risks highlighted and control measures put in place to minimise adverse effects. This facilitated the effective integration and implementation of various activities by ensuring that each phase was properly managed through the census structure that was put in place. During the planning phase, all work streams namely Project Management Office (PMO), Secretariat, Census Inputs and Outputs, Data Operations, Governance, Corporate Services, Census Geography (Frame Update), Information Technology (IT), Census End-to-End Systems Development (CEESD), Publicity, Community Mobilisation and Advocacy, Field Logistics and Specification Development; and Provincial Coordination and Quality Assurance were established. The work streams prepared operational plans which provided detailed lists of activities undertaken to achieve specific objectives and outputs as profiled in the Census 2022 Project Charter.

The goal of the Census 2022 project was to count everyone within the borders of South Africa without omission and duplication. The Census 2022 key objectives were linked to three questions:

- **How many are we?** Determining population size per locality/area, a critical indicator used for resource allocation, measurement of the extent of service delivery, decision-making and budgeting, among others.
- **Who are we?** Census 2022 data provides the current picture in terms of population dynamics of the South African population including demographics and some socio-economic characteristics. The information on population characteristics such as age and sex composition, educational attainment and employment status is pertinent to planning and resource allocation
- **Where do we live?** Census 2022 data provides insights into the living conditions of South Africans in terms of the number of households, average household size and the type of dwelling structures (housing), access to water, availability of essential services and facilities, and internet access. This information is critical in understanding and addressing development challenges at all levels of geography and communities.

Central to answering the three questions is how the information was collected in Census 2022 and the extent of compliance with the regional and international standards in a census undertaking. This includes compliance with the United Nations *Principles and Recommendations of the Population Census*, a set of guidelines issued every ten years to

facilitate the implementation of censuses across countries. Other international standards include:

- Fundamental Principles of Official Statistics<sup>2</sup>
- Handbook on the Management of Population and Housing Censuses and;
- Handbook on Population and Housing Census Editing, among others.

Adhering to international standards allows not only for international and regional comparisons – it is also a measure of national capabilities to implement them. If particular circumstances within a country require a departure from international standards, every effort should be made to explain these departures in the census publications and to indicate how the national presentation can be adapted to international standards<sup>3</sup>.

Critical to note in how Census 2022 was conducted is the effect of the COVID-19 pandemic on census planning, processes, data collection methods and the enumeration period. The impact of the pandemic was twofold, affecting the rollout of the census exercise and the responsiveness of the populace. Concerning the census operations, there were among others: disruptions in the census planning and preparations, no matter how far the implementation had reached; postponement of the census; uncertainties about when preparatory activities could resume and when the census could actually take place; repeat of some programmes already conducted, for example, pre-tests and pilot censuses; increased costs from having to comply with the different requirements of the restrictions from the alerts and introduction of personal preventive equipment (PPE); and the necessity of adopting new approaches not previously envisaged, including for example restriction of training to a virtual training mode. The repeated COVID-19 pandemic waves in South Africa led to the implementation of strict regulations in population movement and interactions between and across households. The restrictions brought interruptions in the census project activities, forcing Stats SA to postpone the Census from October 2021 to February 2022. The pandemic partly presented the organisation with an opportunity for innovation, though at a greater cost in time, financial resources, skills and capacity requirements. It also created the opportunity to harness the benefits of the changing pace of the multi-mode data collection approach. Despite the COVID-19 interruptions, processes, methods, tools and systems/applications

---

<sup>2</sup> Adopted by the Economic and Social Council of the United Nations in its resolution 2013/21 of 24 July 2013 and endorsed by the General Assembly of the United Nations in its resolution 68/261 of 29 January 2014, Available at: <http://unstats.un.org/unsd/dnss/gp/fundprinciples.aspx>

<sup>3</sup> United Nations (2021). *Handbook on the Management of Population and Housing Censuses*. Available at: [https://unstats.un.org/unsd/publication/seriesf/series\\_f83rev2en.pdf](https://unstats.un.org/unsd/publication/seriesf/series_f83rev2en.pdf)

were tested and implemented. In preparation for Census 2022, a multi-mode data collection approach was adopted and tested in various tests including Census Pilot, before implementation during the main census. Three methods of data collection were used in this census, namely:

- Face-to-face interviews - Computer-assisted Personal Interview (CAPI);
- Telephonic interviews - Computer-assisted Telephone Interview (CATI); and
- Computer-assisted Web Interview (CAWI)

The use of a multi-mode data collection approach became an advantage in conducting a census in the COVID-19 pandemic environment, which affected census key phases of geography frame finalisation and data collection.

### **1.2.1 Census 2022 project planning and implementation committees**

The success of a census is determined by how well processes are planned, executed and monitored. The following oversight and advisory bodies/committees were set up and were required to assist with monitoring the project processes and implementation:

#### **Technical Committee**

The purpose of this committee was to coordinate discussions and approval of the Census 2022 project documents related to the planning, processes and methods presented by the project workstreams.

#### **National Advisory Committee**

The Census 2022 National Advisory Committee (NAC) was inaugurated in November 2020 to serve as an oversight body to advise and assist Stats SA in delivering a historic technology-driven census with improved coverage and response rates.

#### **Project Steering committee**

Stats SA's Executive Council (EXCO) played the role of Census project steering committee. The steering committee assisted in the monitoring and implementation of various census value chain activities and phases. This committee was the primary decision-making body with a strategic mandate of ensuring the alignment of the census project with expectations from internal and external stakeholders.

## **Rapid Response Committee**

The purpose of this committee is to provide a forum for process owners to discuss urgent interventions with regard to census processes, procedures and methodologies.

### **1.2.2 Census management and operational structures**

In preparation for Census 2022, Stats SA enacted a census structure to plan for and coordinate all activities during project implementation. This was to ensure that the census objectives and methodologies were executed accordingly and to monitor progress towards a complete and successful population count. Census 2022's management structure comprised of 12 managerial workstreams, each responsible for the planning and implementation of census activities. Each workstream was mandated with specific objectives and outputs which were implemented through the various tests and Census Pilot in preparation for the main census. The twelve workstreams included: Project Management Office (PMO), Secretariat, Census Inputs and Outputs, Data Operations, Governance, Corporate Services, Census Geography (Frame Update), Information Technology (IT), Census End-to-End Systems Development (CEESD), Publicity, Community Mobilisation and Advocacy, Field Logistics and Specification Development; and Provincial Coordination and Quality Assurance.

#### **Project Management Office**

The Project Management Office (PMO) workstream was responsible for the development and application of best project management practices to ensure a successfully planned and executed Census 2022 project. Workstream specific objectives included:

- Ensuring that the census project was planned and managed in a structured manner and that the principles of good project management were applied throughout the project life cycle.
- Ensuring overall project management, coordination and monitoring of workstream activities and all strategic, policy and governing issues regarding the project.

#### **Field Logistics and Specifications Development**

The deliverables of the workstream included facilitation and consolidation of the Census 2022 project's logistical requirements, specifications for the field logistics management tool/application, facilitation of cost-effective procurement of Census 2022 materials through Supply Chain Management (SCM), and implementation of the field logistics management tool (FLOS) for the purpose of distribution, tracking and monitoring of the Census 2022 materials.

Further, the workstream coordinated forward and reverse logistics between Head Office and the provincial/district offices, providing efficient asset/inventory management.

### **Census Geography Frame Update**

Frame Update workstream (Frame Update) was responsible for the Census 2022 digital geographical frame that included Enumeration Areas (EAs), identification and assessment of the appropriateness of external data sources towards constructing a frame. The workstream was also responsible for creating Fieldwork, Supervisor, Field Operations Officer (FOO) and District Census Coordinator (DCC) units. To support the multi-mode data collection, the workstream also provided resources to customise the online registration and unpacking of structures.

### **Facilities, Transport and Security Management**

The Facilities, Transport and Security Management (FTSM) workstream was responsible for screening contract staff applicants in order to identify and exclude those with criminal records from the census project, securing vehicles, airtime/data, safe storage of tablets and registering Census 2022 with National Joint Operations Committee (NATJOC) and Provincial Joint Operations Committees (PROVJOCs).

### **Information Communication and Technology**

Census 2022 was digital and central to this were applications and systems that required an ICT environment that was agile and adaptive to cater for an increased network load. Information Communication and Technology (ICT) workstream was responsible for the development, implementation and maintenance of an efficient and effective integrated ICT infrastructure and architecture to enable the organisation to conduct a successful digital census. The workstream was also responsible for the configuration of tablets for the project and the procurement of servers. The ICT team also provided ICT infrastructure for virtual training and support during the national, provincial and district training, as well as during data collection.

### **Census end-to-end systems development**

The Census End-to-End Systems (CEESD) workstream was responsible for developing, implementing and maintaining efficient and effective integrated application architecture to enable the organisation to conduct a successful digital. The applications developed included

among others, the data collection tools of CAPI, CATI and CAWI. Other workstream objectives included:

- Development, implementation and maintenance of quality-approved systems to enable Stats SA to conduct a successful digital Census in 2022;
- Testing the efficacy of the deployed end-to-end census systems, integration of census systems and automation of all identified census processes;
- Delivering real-time reporting to enable project stakeholders to make informed decisions; and;
- Providing continuous technical support during all levels of training and data collection.

### **Census Inputs and Outputs**

The work stream was responsible for the development of data collection instruments/tools and basic print products. Additional responsibilities included:

- Coordinating the activity of developing data editing and imputation specifications/rules;
- Conducting data editing in collaboration with subject matter specialists and;
- Coordination of census data assessment and evaluation in collaboration with subject matter specialists.

### **Data Operations**

The workstream was responsible for:

- Planning and implementation of training and enumeration approaches;
- Preparing for and implementing data integration from the three data collection modes of CAPI, CAWI and CATI;
- Development of data editing programmes and;
- Conducting data editing in collaboration with Census Inputs and Outputs workstream and subject matter specialists.

### **Project Governance**

The Governance workstream was responsible for ensuring that the Census 2022 was managed with care and integrity and the culture of good governance was practiced by all teams. Its objectives were, among others was to coordinate and facilitate the overall development and monitoring of Census 2022 risks and their mitigations; ensure coordination of Census 2022 Internal Audit planning, execution and reporting; and coordination of efforts on compliance activities and provide advice on governance-related matters. The workstream

also advocated for compliance and adherence to Census 2022 project activities to set standards and requirements. Conducting a census in an era of varying levels of COVID-19 spread and state of health system readiness required such innovation and adaptability that significantly increased the risk factors, compelling the organisation to think differently about the plans, timelines and methodologies and above all, project governance.

### **Corporate Services**

This workstream was responsible for all aspects of human resource management, supply chain management, contracting and financial management, transport, security, accommodation, and legal services. The human resources sub-workstream recruited, appointed, paid and terminated contract staff. This workstream also managed permanent staff deployment to provinces and districts during census field operations.

### **Publicity, Community Mobilisation and Advocacy**

The Census 2022, being the first ever digital census to be conducted in the country, required a more elaborate communication strategy entailing the extensive use of technology to reach out to various audiences and adopting new media, such as social media, online and mobile communication. The Publicity, Community Mobilisation and Advocacy (PCMA) workstream was responsible for:

- The development and implementation of a communication strategy that encompassed among others, educating communities about Census 2022;
- Coordination of internal and external communication activities to ensure awareness of the Census 2022 project by key stakeholders;
- Creation of effective media relations and use of relevant advertising that reach and call targeted audiences to action;
- Conduct publicity and advocacy campaigns supporting recruitment drives, and stakeholder partnerships, educating the public about their participation and the issue of data privacy; and
- Promoting greater buy-in at the community level.

### **Secretariat**

The Secretariat work stream was responsible for Census 2022 documentation on methodologies, instruments/data collection tools, processes and procedures.

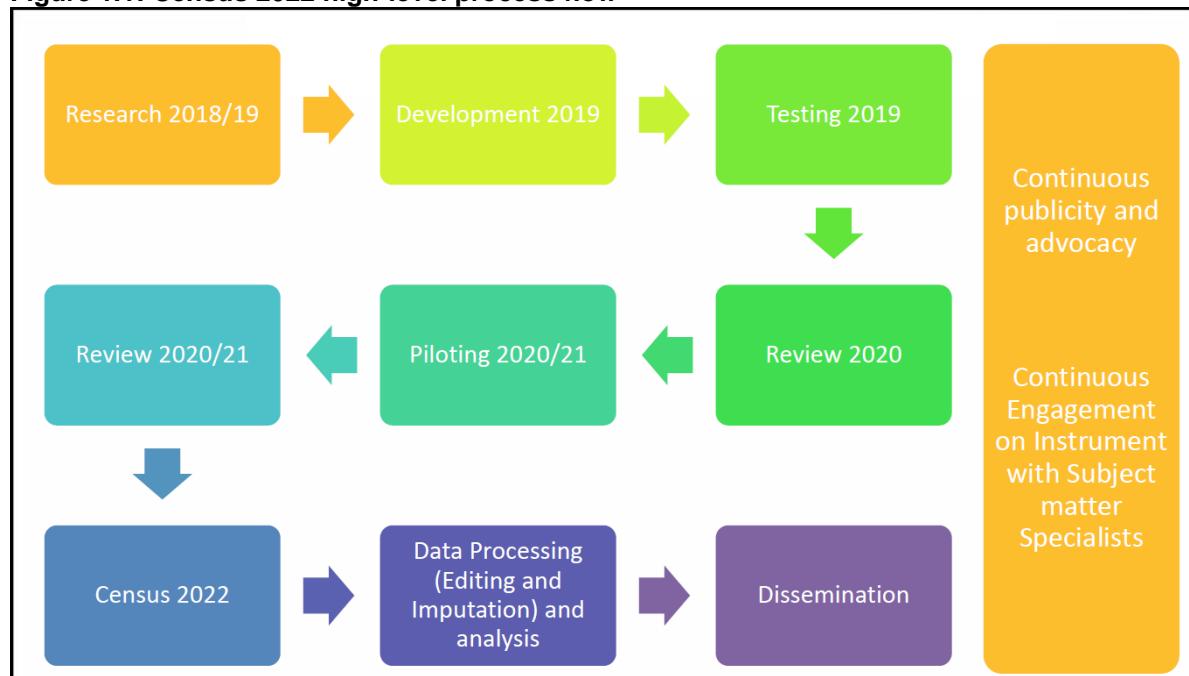

## **Provincial Integration and Quality Assurance**

Provincial Integration and Quality Assurance (PIQA) workstream was created to ensure the efficiency and effectiveness of Census 2022 operations by coordinating and integrating Census 2022 project operational plans and activities across provinces and ensuring quality outputs, particularly at the field level. Among others, the workstream sought to facilitate the finalisation and approval of the Census 2022 project structures. It ensured that resources needed for Census 2022 were distributed in accordance with the workload for each province and district office. PIQA also managed monitoring, quality assurance and oversight of Census 2022 activities in the provinces and facilitated a coherent and consistent approach for timely communication and implementation of project decisions across provinces.

### **1.2.3 High-level Census 2022 process flow**

The Census 2022 high-level process flow describes the different project stages and linked timeframes from the beginning to the end of the project.

**Figure 1.1: Census 2022 high-level process flow**

Planning for Census 2022 commenced with research on the use of multi-mode data collection approaches, followed by the development of census content, methods and systems, all of which were subjected to testing their practicality, relevancy and user-friendliness. All key census phases were planned and fully tested, with revisions made to ensure successful

implementation during the main Census.

For a detailed report on how the count was done, refer to **Census 2022 Report no. 03-01-45** available on the Stats SA website: [www.statssa.gov.za](http://www.statssa.gov.za)

### **1.3 Exclusions**

#### **1.3.1 Variables and themes not in the public domain**

Based on census data quality evaluation exercises undertaken by Stats SA's subject matter specialists and Census 2022 technical experts on various census themes, the following variables/themes will not be published and are therefore not part of this report:

##### **Income**

The income variable is one of the most sensitive questions asked in a census. The Census 2022 data quality evaluation of this variable showed two issues of concern: (1) A high level of individuals who reported no income (41%) and (2) about 8% of the population that did not have a response to this question (unspecified income).

##### **Labour Module**

Following extensive analysis of labour data, it was decided that the labour module data from the Census 2022 will not be released to the general public.

##### **Demography themes**

Mortality, fertility and migration are the drivers of population change in terms of population size, growth, structure, and composition.

##### **Mortality**

During the data evaluation exercise, it was observed that the number of household deaths from Census 2022 were almost half of the deaths estimated from Mid-Year Population Estimates (MYPE) and Medical Research Council (MRC) over the same period. The deaths were also lower than deaths reported in National Population Register (NPR) in 2021. In addition to these, there was significant proportion of unspecified cases for age and sex of the deceased, indicative of content errors.

## **Fertility**

Variables in the fertility section recorded high proportions of unspecified cases including women who reported that they have never given birth to children in their lifetime, particularly among women at the end of the reproductive life span. Further, the magnitude of underreporting of both births reported in the year preceding the census and the total children ever born yielded low estimates, not comparable to estimates produced by other sources over the same period.

## **Migration**

Stats SA asks questions on migration which do not distinguish between documented and undocumented migrants since it is the objective of census to count everyone in the country at the time of census. Therefore, no statistics reported are based on the distinction between documented and undocumented migrants. The province of previous residence variable is derived, and not part of the analysis in this report.

### **1.3.2 Households**

The number and proportions profiled in this report excludes unconventional households (i.e. households in dwelling units that are attached to collective living quarters). Agricultural households have been excluded in this report and they are to be profiled in separate reports.

### **1.3.3 Homeless and institution-based populations**

Homeless persons as well as persons who were in institutions on census reference night (2nd February 2022) are excluded, with the exception of tables and indicators on age and sex structure.

## CHAPTER 2: POPULATION CHARACTERISTICS

### 2.1 Introduction

This section will present the key findings of the demographic characteristics of KwaZulu-Natal's population. The population size, growth rates, population group and age and sex structure will provide a general idea of the population composition of the province across its ten districts, one metropolitan municipality and 43 municipalities. Indicators on marital status and sex will be provided and comparisons to previous censuses discussed.

### 2.2 Population distribution

**Table 2.1: Population distribution by province, Census 1996-2022**

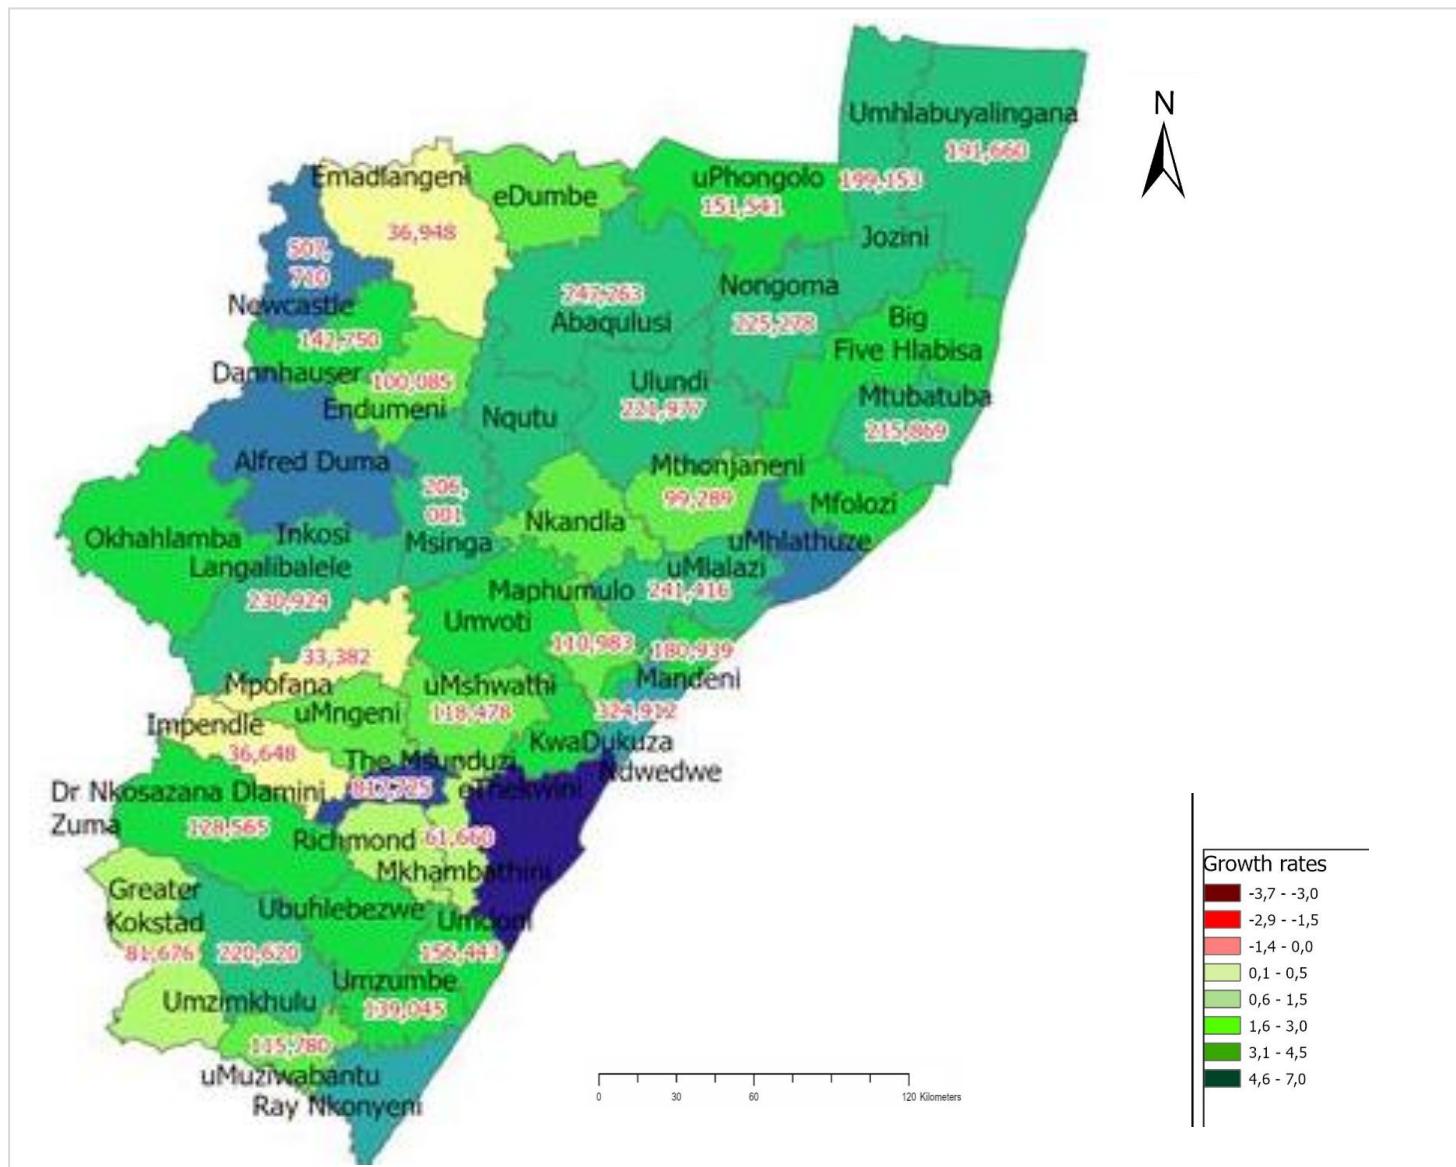

Province	Population				Growth rate		
	Census 1996	Census 2001	Census 2011	Census 2022	1996-2001	2001-2011	2011-2022

Table 2.1 shows the distribution of South Africa's population across its nine provinces from 1996 to 2022. In 2022, South Africa's total population was 62 million, increasing steadily from 40,6 million in 1996, 44,9 million in 2001 and 51,8 million in 2011. The country recorded a growth rate of 1,8 from 2011 to 2022. KwaZulu-Natal recorded a total population of 12,4 million in 2022, an increase from 8,6 million in 1996, 9,6 million in 2001 and 10,3 million in 2011. KwaZulu-Natal's population is the second largest in the country after Gauteng, and accounts for one-fifth (20%) of the country's population. The growth rate of the province between 2011 and 2022 was 1,9, slightly higher than the national rate of 1,8.

Map 2.1: Distribution of population by local municipality, Census 2022

**Map 2.2: Population growth rates by local municipality, Census 2011-2022**

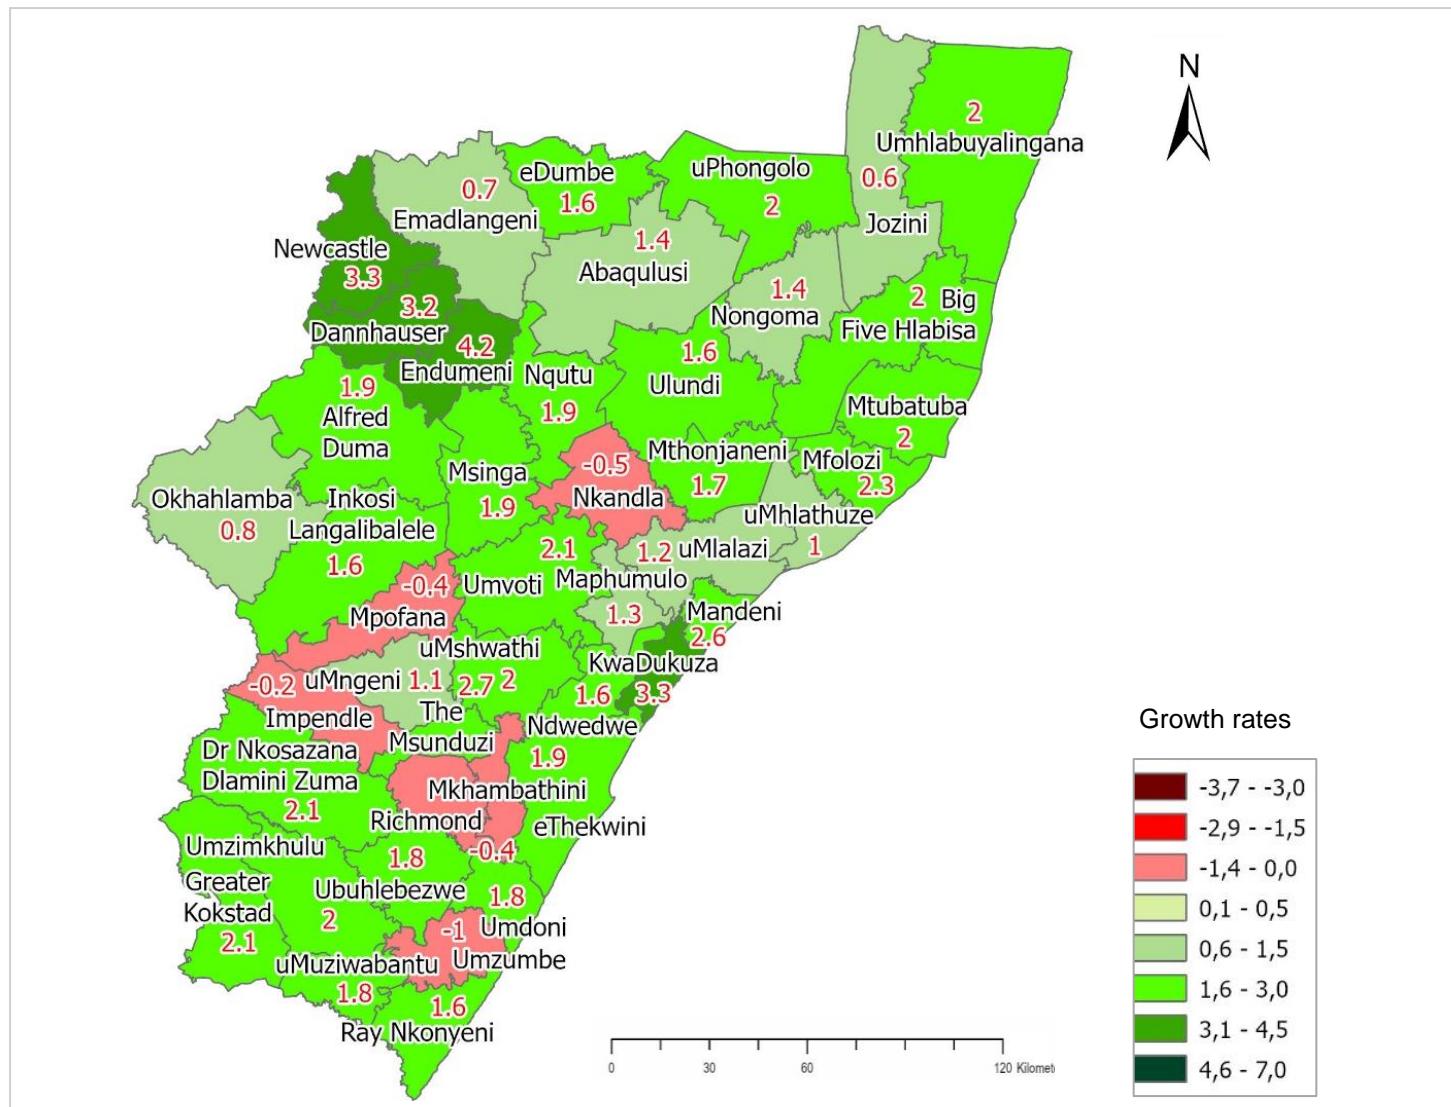

Table 2.2 and Maps 2.1 and 2.2 show the distribution of KwaZulu-Natal's population by district and local municipality and their respective growth rates. eThekini metropolitan municipality was the largest contributor to the total population of KwaZulu-Natal in both 2011 (3,5 million) and 2022 (4,2 million). The least populous district in 2022 was Harry Gwala (563 893), almost eight times smaller than eThekini. The district with the highest growth rate, Amajuba (3,1) was significantly above the provincial average of 1,9. The least populous municipalities in the province, Emadlangeni (36 948) in the Amajuba district and Mpofana (33 382) and Impendle (36 648) in the Umgungundlovu district recorded populations of less than 40 000.

Four of the six municipalities with negative growth rates were located in the Umgungundlovu district - Impendle recorded a negative growth rate of -0,2 and Mpofana, Mkhambathini and Richmond all recorded a negative growth rate of -0,4. Umzumbe (-1,0) in the Ugu district and Nkandla (-0,5) in King Cetshwayo district also recorded negative growth rates. All three municipalities in Amajuba district, Endumeni (4,2), Newcastle (3,3) and Dannhauser (3,2) recorded the highest growth rates in the province, considerably higher than the province's average of 1,9.

The density of a population tells us the average population size per square kilometre. Table 2.3 above shows the population density of KwaZulu-Natal in 2022 was 132, meaning that an average of 132 persons resided in one square kilometre. This was an increase from the density of 109 in 2011. eThekwinı's area size of 2 556 km<sup>2</sup> was the smallest amongst the districts, but with the highest density of 1 659, over 12 times the density of the province. The municipalities with the lowest densities were Emadlangeni (10 persons per square kilometre) and Mpofana with 22 persons living in a square kilometre.

## 2.4 Age and sex structure

**Figure 2.1: Percentage distribution of population by province & sex, Census 2022**

In KwaZulu-Natal, just over half (52,4%) of the population was female and 47,6% male. The comparison of KwaZulu-Natal and South Africa's population indicates a slightly higher proportion of females in KwaZulu-Natal (52,4%) compared to the national percentage of 51,5%.

Tables 2.4 and 2.5 above show the sex ratios by province, district, local municipality and census years for KwaZulu-Natal. The sex ratio provides us with the number of males for every 100 females. A sex ratio above 100 indicates more males than females, and one below 100, indicates more females than males. The sex ratio of KwaZulu-Natal for 1996 and 2001 was 88 and increased slightly to 91 in 2011 and 2022. The sex ratios for the province across all the years were lower than the national ratios recorded, with the biggest difference seen in 1996 where the sex ratio in South Africa was 93 compared to KwaZulu-Natal's 88. In 1996, 2001 and 2011, the only provinces with lower sex ratios than KwaZulu-Natal, were the Eastern Cape and Limpopo. In 2022, the Eastern Cape, Limpopo and Free State recorded lower sex ratios than KwaZulu-Natal. The highest sex ratio was recorded in Emadlangeni local municipality (97), followed closely by eThekweni, where 96 males for every 100 females could be found.

**Figure 2.2: Percentage distribution of population by five-year age groups, Census 2011-2022**

*Unspecified age excluded*

**Figure 2.3: KwaZulu-Natal population pyramid, Census 2011 (blue shaded) & Census 2022 (transparent)**

*Unspecified age excluded*

Figures 2.2 and 2.3 above show a comparison of the population by age groups for 2011 and 2022. Although we see a significant change in the patterns between 2011 and 2022 for some age groups, in both 2011 (11.7%) and 2022 (9.3%), those aged 0-4 accounted for the largest percentage of the population (in 2022 it was both the 0-4 and 10-14 age group which recorded 9.3%). This is confirmed in the population pyramid which depicts the expected pyramid where the largest proportion of both males and females can be found in the younger age groups and the smallest proportions in the older age groups. From the age group 40 and older, the overall trend line and shape in both years are similar. However, we see significant decreases in the percentage contribution of the youngest age groups 0-4 and 5-9 as well as the 15-19 and 20-24-year age groups between 2011 and 2022. The opposite is seen in the 30-34 and 35-39 age groups, where we see significant increases in the percentage contribution of these groups from 2011 to 2022.

Unspecified age excluded

Table 2.6 shows the population of KwaZulu-Natal in broad age groups by district and local municipality. Over eight million of the province's population are between the ages of 15-64, accounting for over three-fifths (66,4%) of the province. Just over one-quarter (27,2%) of the province's population is aged between 0 and 14 and the smallest proportion (6,4%) of the population are the elderly, aged 65 and above. In all districts and local municipalities, the proportion of the population aged 15-64 makes up more than half of the population. eThekwin metropolitan municipality has the highest proportion of those in the working age group of 15-64 years (72,2%). Msinga local municipality, with just less than two-fifths (38,5%) of its population between the ages of 0 and 14, recorded the largest proportion of children in the province. Greater Kokstad local municipality had the lowest proportion of the elderly population, where only 3,5% of the population was aged 65 and above.

Unspecified age excluded

Dependency ratios provide us with the ratio of the economically dependent population (children under 15 years and persons aged 65 or over) to the working-age population aged 15-64. The ratio is expressed as the number of persons younger than 15 years and those 65 and over per

100 persons of working age. The dependency ratio for KwaZulu-Natal in 2022 was 50,5, a decrease from the 58,5 recorded in 2011. A dependency ratio of 50,5 means that approximately one dependant is supported by two persons of working age. eThekweni metropolitan municipality recorded the lowest dependency ratio of 38,4%, which can be expected for a metropolitan municipality where there are more employment opportunities. Most districts and local municipalities, however, recorded higher dependency ratios than the provincial average, with the highest 79,8, recorded in Msinga local municipality, a decrease from an even higher 97,1 in 2011.

**Figure 2.4: Distribution of youth (15-34 years old) by district, Census 1996-2022**

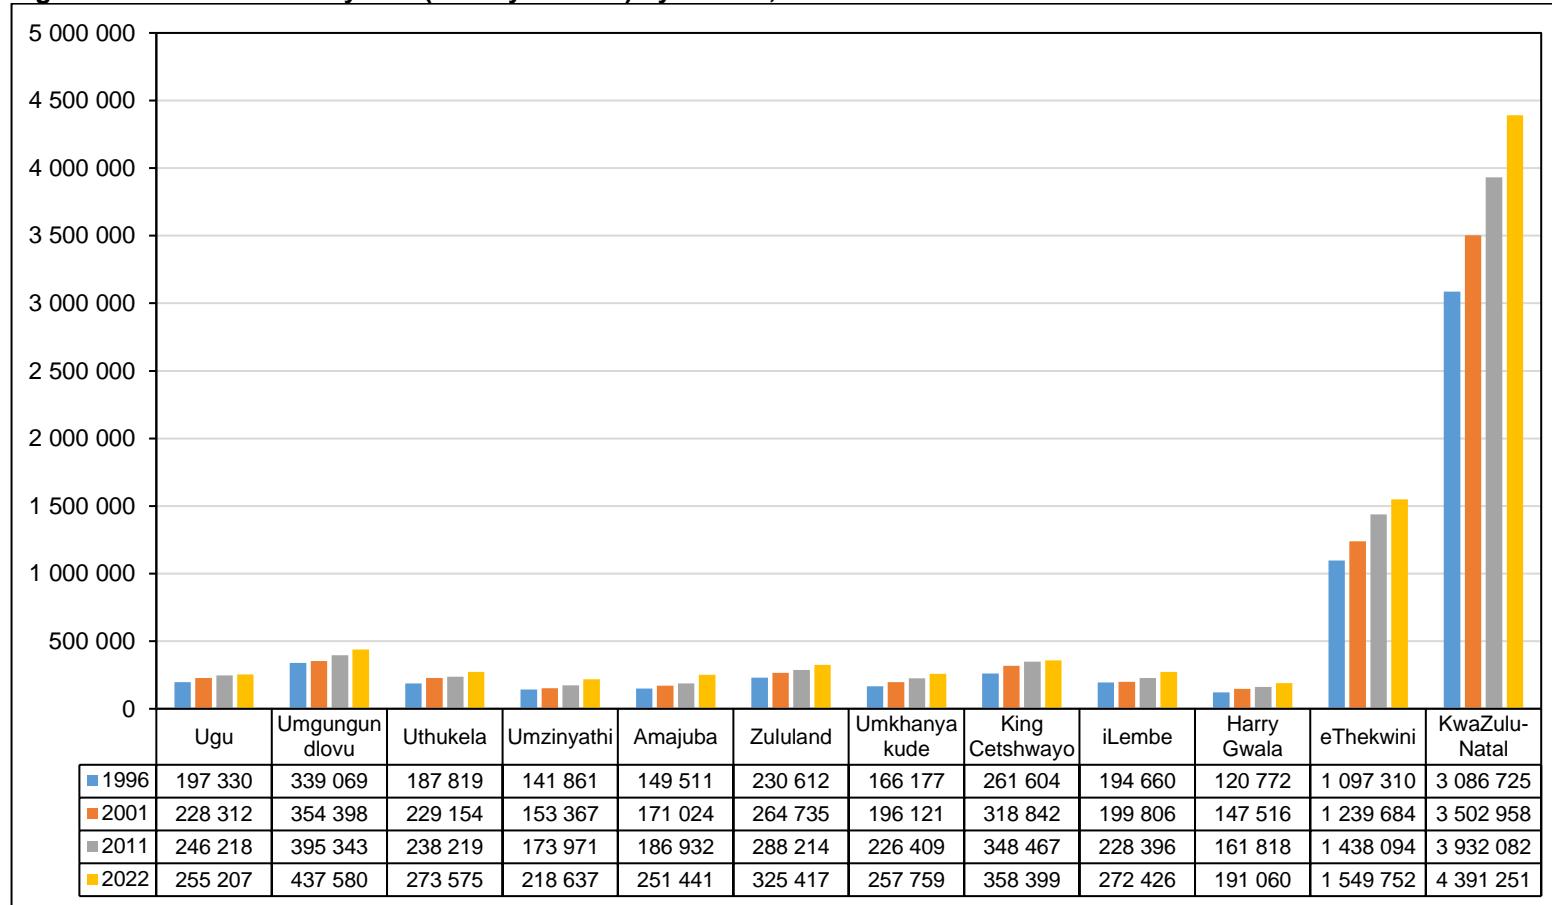

Figure 2.4 above shows the number of youth aged 15-34 by district over the census years. The youth population in the province increased from 3,1 million in 1996 to 4,4 million in 2022. eThekuni had the highest number of youth in all years increasing from 1,1 million in 1996 to 1,5 million in 2022.

The youth population in the province in 2022 comprised of 2,1 million males and 2,2 million females. In all districts, there were more female youth as compared to males.

## 2.5 Population group

Figure 2.5: Distribution of population by population group, Census 2011-2022

*Unspecified population group excluded*

In 2022, black Africans made up 84,8% of the province's population, slightly decreasing from 86,8% in 2011. Indian/Asians made up 9,3% in 2022, an increase from the 7,4% in 2011. The white population (4,1%) and coloured population (1,5%) together accounted for only 5,6% of the population.

Unspecified population group excluded

Table 2.9 shows that the largest proportion of the Indian/Asian population resided in eThekwini (19,7%) and the KwaDukuza local municipality (18,6%). A higher proportion (22,9%) of the white population lived in the uMngeni local municipality, significantly higher than the provincial proportion of 4,1%. Over 99% of the population of Mthonjaneni, Umzimkhulu, Ndwedwe, Umhlabuyalingana, Jozini, Msinga, Nqutu, Maphumulo, Ulundi, Nkandla, Umzumbe and Nongoma local municipalities were black Africans, with the highest proportion found in Umzumbe and Nongoma (both 99,7%).

## 2.6 Marital status

**Table 2.10: Distribution of population aged 12 years & older by marital status, district & local municipality, Census 2022**

District/local municipality	Marital status													
	Legally married		Living together like husband & wife/partners		Divorced		Separated, but still legally married		Widowed		Never married		Total

Unspecified & Not applicable excluded

Table 2.10 above shows the distribution of the population aged 12 and older by marital status, district and local municipality. The majority of the population in Kwazulu-Natal, 70,9% reported that they were never married. Just less than one-fifth (19,8%) of the province was legally married and small proportions reported that they cohabited (4,8%), were widowed (3,3%), divorced (1,0%) or separated, but still legally married (0,3%). Over four-fifths of Umhlabuyalingana (82,9%), Jozini (82,5%), Umkhanyakude (81,4%), eDumbe (80,8%) and UPhongolo local municipalities (80,8%) were never married, in contrast to uMngeni local municipality which had the lowest proportion (58,4%) of those never married. Msinga was the only local municipality where more than 10% of the population reported that they were cohabiting, almost three times the proportion recorded in the province. uMngeni and Impendle local municipalities both in the Umgungundlovu district, had the highest proportions (5,0% & 5,3%) of the widowed population.

The marriage rate is calculated by dividing the total number of married persons by the total population in that area multiplied by 1 000. KwaZulu-Natal's calculated marriage rate in 2022 was 197, an increase from 188 in 2011, meaning that in 2022, 197 persons per 1 000 persons in the province were married. The marriage rates recorded in uMngeni (297), eThekwin (238), Umdoni (237), the Msunduzi (236)

and Ray Nkonyeni (234) local municipalities were the highest in the province and Msinga (79) and Umhlabuyalingana (90) local municipalities the lowest (see Appendix 1). The highest divorce rates amongst the local municipalities (above the provincial average of 10), were found in Umdoni (11), Endumeni and KwaDukuza (both 12), Ray Nkonyeni local municipality and eThekwini metropolitan municipality (both 15), and the Msunduzi (16) and uMngeni (19) local municipalities (see Appendix 2).

## 2.7 Language

**Table 2.11: Distribution of population aged one year & older by language most often spoken in the household, Census 2011-2022**

Language	Census 2011		Census 2022	
	N	%	N	%
Afrikaans	159 436	1,6	125 328	1,0
English	1 319 361	13,3	1 725 112	14,4
IsiNdebele	108 629	1,1	3 803	0,0
IsiXhosa	331 657	3,3	368 805	3,1
IsiZulu	7 707 715	77,7	9 607 547	80,0
Sepedi	19 822	0,2	6 374	0,1
Sesotho	77 384	0,8	72 864	0,6
Setswana	50 915	0,5	3 233	0,0
Sign language	47 065	0,5	1 206	0,0
SiSwati	8 033	0,1	5 814	0,0
Tshivenda	4 205	0,0	2 058	0,0
Xitsonga	8 710	0,1	4 304	0,0
Other	74 774	0,8	88 986	0,7
<b>Total</b>	<b>9 917 707</b>	<b>100,0</b>	<b>12 015 433</b>	<b>100,0</b>

*Unspecified & Not applicable excluded*

The language most often spoken in the province by those aged one year and older in 2011 and 2022 was isiZulu. From a total of 12 million persons aged one year and older in 2022, four-fifths (80%), a total of 9,6 million persons in the province spoke isiZulu most often in their households. This was followed by English (14,4%) and IsiXhosa (3,1%). There were no notable changes between 2011 and 2022.

## 2.8 Religion

**Table 2.12: Distribution of population by religious affiliation, Census 2022**

Religious affiliation	N	%
Christianity	9 121 203	74,9
Islam	229 671	1,9
Traditional African religion	1 657 630	13,6
Hinduism	514 571	4,2
Buddhism	6 885	0,1
Bahaism	1 628	0,0
Judaism	4 403	0,0
Atheism	12 086	0,1
Agnosticism	8 020	0,1
No religious affiliation/belief	410 067	3,4
Other	215 789	1,8
<b>Total</b>	<b>12 181 952</b>	<b>100,0</b>

*Do not know, Unspecified & Not applicable excluded*

The data collected in KwaZulu-Natal on religious affiliation shows that almost three-quarters (74,9%) of the province were affiliated with Christianity, 13,6% to a traditional African religion and 4,2% with Hinduism.

## 2.9 Conclusion

KwaZulu-Natal has the second largest population in the country after Gauteng with a total of 12,4 million persons, accounting for one-fifth (20%) of the country's population. The province recorded a growth rate of 1,9. The sex structure reflected the expected norm of a slightly higher proportion of females as compared to males with a sex ratio of 91. The age and sex structure depicted a larger proportion of the population in the younger age groups and the smallest in the older age groups. Most of the population in this province, 66,4% are between 15-64 years and over one-quarter (27,2%) are aged between 0 and 14 years. Black Africans make up the majority (84,8%) of the population and Indians/Asians account for 9,3% of the province's population. The majority (70,9%) of the population 12 years and older were never married and 19,8% were legally married. IsiZulu was the language most often spoken in the province, followed by English. Just less than three-quarters (74,9%) of the province identified themselves as Christian and 13,6% practiced a traditional African religion.

## CHAPTER 3: MIGRATION

### 3.1 Introduction

Migration is one of the demographic processes that determine the growth of the population. This chapter presents a descriptive analysis of the migratory patterns of persons born in KwaZulu-Natal and those residing in KwaZulu-Natal, but born elsewhere.

**Table 3.1: Distribution of population by province of birth & province of usual residence, Census 2022**

*Unspecified, Not applicable & Do not know excluded*

As expected, the majority of the population in the province, 11,6 million persons were born in KwaZulu-Natal and resided there at the time of enumeration. The largest number of those born in KwaZulu-Natal who resided elsewhere had moved to the Eastern Cape (194 489), outside of South Africa (163 296) and Gauteng (129 530).

Unspecified, Do not know & Not applicable excluded for Census 2011

Table 3.2 shows the percentage distribution of the population born in South Africa and those born outside South Africa for 2011 and 2022. The overwhelming majority (98,7%) of KwaZulu-Natal's

population were born in South Africa, with only 1,7% in 2011 and 1,3% in 2022 born outside South Africa. The districts with the highest percentage of those born outside South Africa in 2022 were Umgungundlovu (2,3%), followed by eThekwi (1,8%) and ILembe (1,7%) districts, all higher than the provincial proportion of 1,3%. The districts with the lowest proportion of foreign-born persons were Zululand and Umkhanyakude, both at 0,5%. At the municipality level, uMngeni local municipality had the largest foreign-born proportion (5,6%) in the province and Maphumulo local municipality the lowest, at 0,1%. There were not many significant changes between 2011 and 2022, with the largest decrease seen in uMngeni local municipality whose foreign-born population decreased from 7,3% to 5,6% and Mkhambathini local municipality from 2,2% in 2011 to 0,7% in 2022.

**Table 3.3: Distribution of population born outside South Africa by region of birth, Census 2011-2022**

Region of birth	Census 2011		Census 2022	
	N	%	N	%
SADC	92 442	66,1	116 774	72,7
Rest of Africa	14 468	10,4	15 616	9,7

Asia	9 383	6,7	9 097	5,7
North America	684	0,5	1 141	0,7
Latin America & Caribbean	512	0,4	761	0,5
Oceania	572	0,4	1 313	0,8
<b>Total</b>	<b>139 755</b>	<b>100,0</b>	<b>160 641</b>	<b>100,0</b>

*Unspecified & Not applicable excluded*

The majority (72,7%) of the population born outside of South Africa and residing in KwaZulu-Natal were born in the SADC region. Smaller percentages were born in the United Kingdom and Europe (9,9%), the rest of Africa (9,7%) and Asia (5,7%).

### 3.2 Conclusion

The majority of the province, 11,6 million persons, were born in KwaZulu-Natal and resided there at the time of enumeration. The largest number of those born in KwaZulu-Natal who resided elsewhere had moved to the Eastern Cape (194 489), outside of South Africa (163 296) and Gauteng (129 530). Those in the province who were born outside of South Africa were mostly born in the SADC region.

## **CHAPTER 4: EDUCATION**

### **4.1 Introduction**

Education is one of the basic human rights in South Africa and among the fundamental socio-economic indicators for development. In this chapter, educational attendance, the highest level of education and the field of education will be profiled using Census 2022 data. Comparisons to Census 2011 data will be made where possible.

## 4.2 Attendance at an educational institution

Do not know and Unspecified excluded

Table 4.1 shows the educational institution attendance patterns and trends among individuals in the age group 5–24 years for Census 2011 and 2022. The proportion of individuals attending an educational institution from 2011 to 2022 remained almost the same with only a minimal increase provincially from 74% in 2011 to 74,2% in 2022. In 2022, four-fifths (80%) of the population in the districts of Umkhanyakude and Umzinyathi in this age group were attending an educational institution, with Zululand (79,8%) and Harry Gwala (79,7%) districts following closely behind. Looking at municipalities, attendance was the highest in Nkandla local municipality with 83,7%, followed closely by UMuziwabantu local municipality (83,2%). eThekewini metropolitan municipality recorded the same proportion (67,7%) of persons attending in both 2011 and 2022. Together with Umgungundlovu (71,9%) and ILembe (74%) districts, they recorded the lowest attendance among the districts, lower than the provincial proportion of 74,2%.

#### 4.3 Early childhood development

Early childhood development (ECD) is one of the priority areas of the South African government and remains a critical policy issue that the Department of Basic Education aims to address. The early years are critical for the acquisition of perceptual motor skills required for the foundations of reading, writing and numeracy in later years. The attendance at an ECD institution for the population aged 0-5 will be discussed. No comparisons are made, as this question was not asked in 2011.

**Table 4.2: Distribution of population aged 0–5 years by ECD institution attendance status, district & local municipality, Census 2022**

A total of 56,7% of children in KwaZulu-Natal attended an ECD educational facility as shown in Table 4.2 above. Amongst the districts, King Cetshwayo district had the lowest proportion of children attending an ECD facility, with below half, 47,7% attending. Two of the local municipalities with the lowest proportions attending an ECD facility, Mthonjaneni (38,7%) and uMlalazi (39,6%) were located in this district. In eThekwin metropolitan municipality, just over three-fifths (61%) of children aged 0 to 5 were attending an ECD educational facility, just above the provincial average of 56,7%.

#### 4.4 Level of education

**Table 4.3: Distribution of population aged 20 years & older by highest level of education completed, district & local municipality, Census 2022**

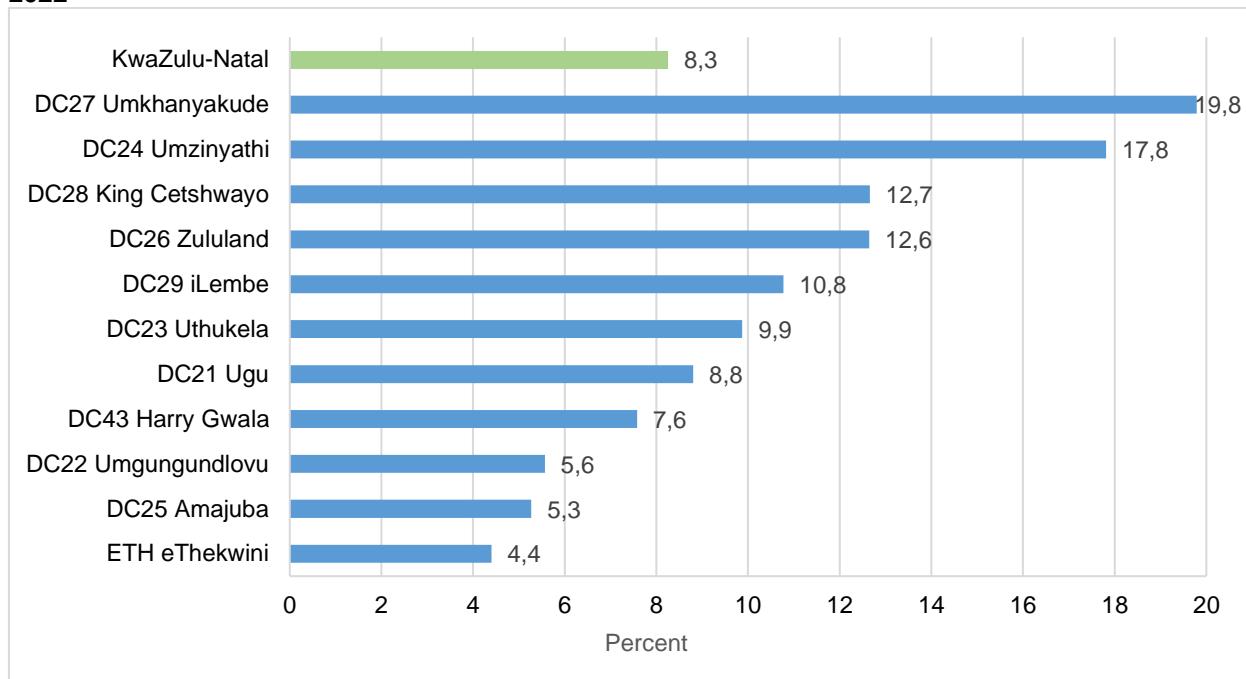

District/local municipality	No schooling		Some primary		Completed primary		Some secondary		Completed secondary		Tertiary/post-school education		Other		Total

Do not know, Not applicable & Unspecified excluded

Table 4.3 shows the distribution of the population aged 20 and older by their highest level of education. The results indicate that out of the 7,4 million residing in KwaZulu-Natal, about 8,3% have no formal education, while only 10,4 % attained a higher education qualification. Just over two-fifths (41,2%) of the population have a secondary education as their highest education level. Umgungundlovu district recorded the highest proportion of persons with a higher education (9,1%).

**Figure 4.1: Percentage of population aged 20 years & older with no schooling by district, Census 2022**

*Do not know, Not applicable & Unspecified excluded*

Figure 4.1 above shows the comparisons of the population aged 20 and older with no schooling by district. KwaZulu-Natal recorded a proportion of 8,3% in the province with no schooling, which ranged from 19,8% and 17,8% in Umkhanyakude and Umgungundlovu districts to 4,4% in eThekini metropolitan municipality. Districts with no schooling proportions below the provincial proportion of 8,3% were Harry Gwala (7,6%), Umgungundlovu (5,6%) and Amajuba (5,3%) districts and eThekini metropolitan municipality (4,4%).

#### 4.5 Field of education

**Table 4.4: Distribution of persons aged 20 & older by field of education & sex, Census 2022**

Field of education	Male		Female		Total	
	N	%	N	%	N	%
Business management	99 132	26,6	128 044	26,2	227 177	26,4

Law	11 600	3,1	12 312	2,5	23 912	2,8
Other	61 049	16,4	65 910	13,5	126 959	14,8
<b>Total</b>	<b>372 316</b>	<b>100,0</b>	<b>488 284</b>	<b>100,0</b>	<b>860 600</b>	<b>100,0</b>

*See Appendix 5 for field of education grouping*

Table 4.4 above shows that the most popular fields of study in the province were Humanities, social sciences and applied humanities, studied by 29,6% of the population, followed by Business management (26,4%). Smaller percentages (13,9%) of the population studied Engineering and

other applied sciences and Other accounted for 14,8%, which refers to any field of study not listed. A significant difference between the fields of study chosen by females as compared to males is observed. The percentage of males studying Engineering and other applied sciences was over four times the percentage of females studying the same (24,4% of males and 5,9% of females). A larger percentage of females (12,3%) as compared to males (5,1%) were studying Health sciences and 36,8% of females as compared to 20,3% of males studied Humanities, social sciences & applied humanities.

See Appendix 5 for field of education grouping

There are a few differences observed between the fields of education and population group, although not as pronounced as in the sex differences shown in Table 4.4. Amongst the coloured (27,9%) and Indian/Asian population (32,5%), Business management was the most popular field of study and Humanities, social sciences & applied humanities were the most popular amongst the Black African (32,5%) and white populations (26,1%).

#### 4.6 Conclusion

A total of 74,2% of the population in KwaZulu-Natal aged 5-24 were attending an educational institution. Of the children aged five and younger, more than half (56,7%) attended an ECD educational facility. From the population aged 20 and older, 41,2% reported that their highest level of education was the completion of secondary education, 10,4% attained a higher education qualification and 8,3% had no formal education. The most popular fields of study were Humanities, social sciences and applied humanities, studied by 29,6% of the population, followed by Business management (26,4%) and Engineering and other applied sciences (13,9%).

## CHAPTER 5: GENERAL HEALTH AND FUNCTIONING

### 5.1 Introduction

This chapter focuses on general health, functioning, and disability prevalence among persons aged five and older. In this chapter, the extent of limitations in six functional domains (seeing, hearing, communicating, walking, remembering and self-care) will be discussed, using Census 2011 and 2022 data.

Disability prevalence was measured using a computed index based on the general health and functioning questions asked. The threshold (level of inclusion) used in computing persons with and without disabilities was as follows:

- A person who reported ‘some difficulty’ in at least two functional domains was categorised as having a disability;
- A person who reported a lot of difficulty in any of the six functional domains was categorised as having a disability;
- A person who reported ‘unable to do’ in any of the six functional domains was categorised as having a disability;
- A person who reported ‘no difficulty’ in any of the six functional domains was categorised as having no disability; and
- A person who reported ‘some difficulty’ in one of the six functional domains was categorised as having no disability

### 5.2 Health and functional domains

**Table 5.1: Distribution of persons aged five years & older by type & degree of difficulty in functional domains, Census 2011-2022**

Functional domain	Degree of difficulty	Census 2011		Census 2022	
		N	%	N	%
Seeing	No difficulty	7 633 667	88,6	10 085 683	91,1

	Do not know	8 701	0,1	8 758	0,1
	<b>Total</b>	<b>8 563 671</b>	<b>100,0</b>	<b>11 068 699</b>	<b>100,0</b>
<b>Self-care</b>	No difficulty	7 995 219	96,0	10 824 246	97,8
	Some difficulty	203 850	2,4	161 277	1,5
	A lot of difficulty	57 674	0,7	47 057	0,4
	Cannot do at all	56 088	0,7	28 098	0,3
	Do not know	12 879	0,2	7 961	0,1
	<b>Total</b>	<b>8 325 711</b>	<b>100,0</b>	<b>11 068 639</b>	<b>100,0</b>

The type and degree of difficulty in various domains for KwaZulu-Natal in Census 2011 and 2022 are shown in Table 5.1 above. In all the domains, seeing, hearing, communicating, remembering and self-care, over 90% of the population reported that they had no difficulty. Minimal differences are observed when we compare Census 2011 with 2022, with the highest change in the domain of seeing, where 0,3% of the population reported that they had a lot of difficulty seeing in 2011, which decreased to 0,1 in 2022.

### 5.3 Disability prevalence

Age group	District											
	Ugu	Umgungundlovu	Uthukela	Umzinyathi	Amajuba	Zululand	Umkhanyakude	King Cetshwayo	iLembe	Harry Gwala	eThekini	
80-84	48,3	42,4	54,7	49,0	49,8	51,5	38,7	52,0	47,4	59,0	42,7	46,6
85+	60,5	52,2	59,9	57,7	58,9	59,4	47,5	58,7	57,0	69,6	53,1	56,3
Total	7,9	6,1	6,4	6,1	5,8	6,4	4,9	6,4	6,2	8,0	5,4	6,1

*Unspecified excluded*

The results presented in Table 5.2 show the disability prevalence in KwaZulu-Natal at 6,1%. Variations at the district level revealed that persons with disabilities were more prevalent in Harry Gwala (8%) and Ugu districts (7,9%). The lowest disability prevalence was in Umkhanyakude (4,9%), and together with eThekini (5,4%) and Amajuba (5,8%), recorded prevalence rates lower than the national prevalence of 6,1%. Disability prevalence increased with age, with the 85+ age group recording the highest disability prevalence of 56,3%.

#### 5.4 Conclusion

The vast majority of KwaZulu-Natal's population did not have any difficulties in the various functional domains of seeing, hearing, communicating, remembering and self-care. The highest percentage of those who responded that they "cannot do at all" was in the self-care (0,3%) and walking domains (0,2%). The disability prevalence rate in the province was calculated at 6,1% with the prevalence increasing with age.

## CHAPTER 6: HOUSEHOLD CHARACTERISTICS AND ACCESS TO SERVICES

### 6.1 Introduction

This chapter profiles household characteristics and access to basic services. It focuses on household size, household headship, housing and dwelling type, access to basic services, the type of energy sources used by households, ownership of household goods and access to internet services by district and local municipality. Comparisons to 2011 are made where possible.

### 6.2 Household size

Table 6.1 above shows the distribution of households and the average household size by district and municipality for KwaZulu-Natal for 2011 and 2022. The total number of households in the province increased from 2 539 337 to 2 853 741 between the two periods, while the average household size increased from 4,0 to 4,4. The highest number of households, just over 1,1 million were found in eThekwini metropolitan municipality. Between 2011 and 2022, the household size in eThekwini increased from 3,6 to 3,8. The district with the highest household size was Zululand (5,7) and one of its municipalities, Nongoma local municipality, recorded the highest household size of 7,0 in 2022, an increase from the 5,7 recorded in 2011.

### 6.3 Household headship and composition

**Table 6.2: Distribution of households by sex of household head & district, Census 2022**

District	N			% Total

**Figure 6.1: Percentage of female-headed households by district, Census 2022**

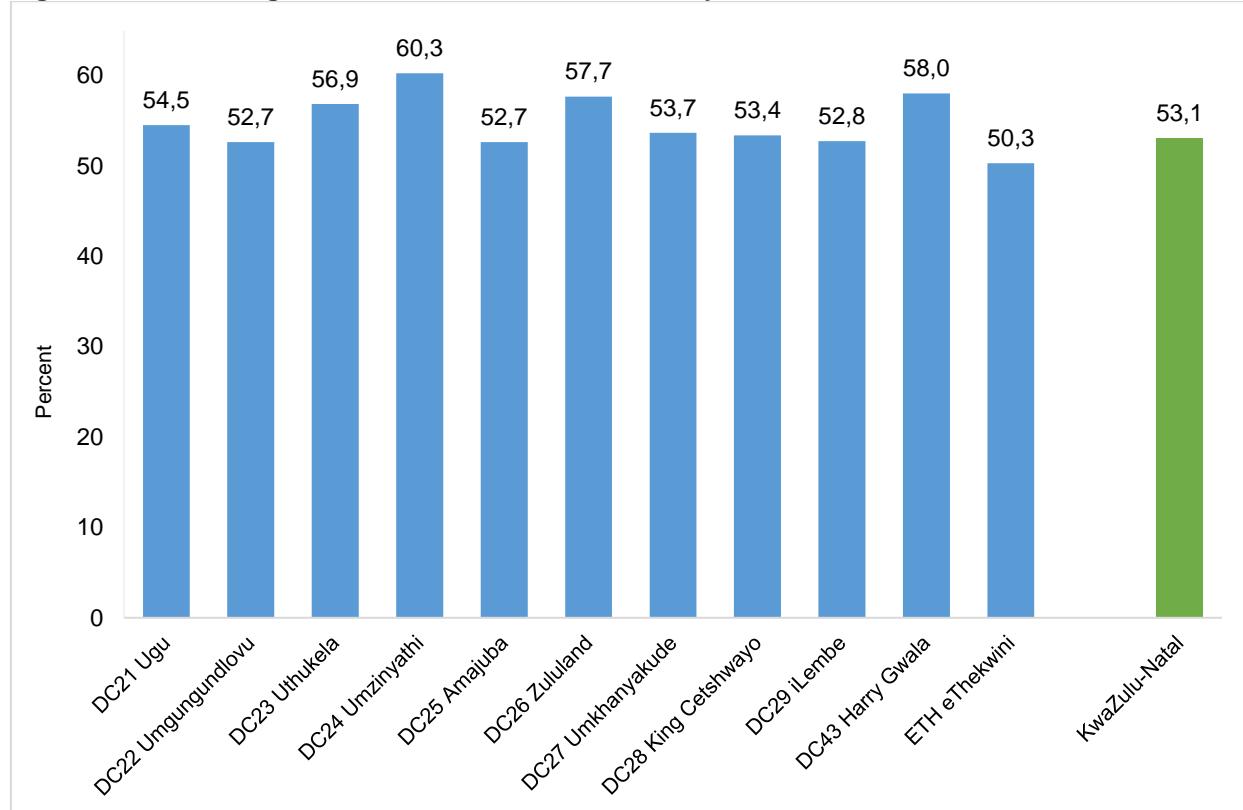

Table 6.2 and Figure 6.1 above show that a larger number of households in KwaZulu-Natal are headed by females (53,1%) when compared to males (46,9%). Umzinyathi local municipality had the highest percentage of female-headed households (60,3%) compared to male-headed households (39,7%) and eThekweni metropolitan had the lowest percentage (50,3%) of female-headed households, slightly lower than the provincial proportion of 53,1%.

Table 6.3 shows the percentage of child-headed households in the province for 2011 and 2011. The percentage of households headed by children aged 17 and younger decreased from 0,9% in 2011 to 0,4% in 2022. In 2022, Jozini (1,4%), Umzimkhulu (1,3%), uMlalazi and UMuziwabantu (both 1,2%) local municipalities recorded percentages of child-headed households larger than 1%, all of which, except for uMlalazi (which stayed 1,2% in both), decreased between 2011 and 2022.

Unspecified excluded

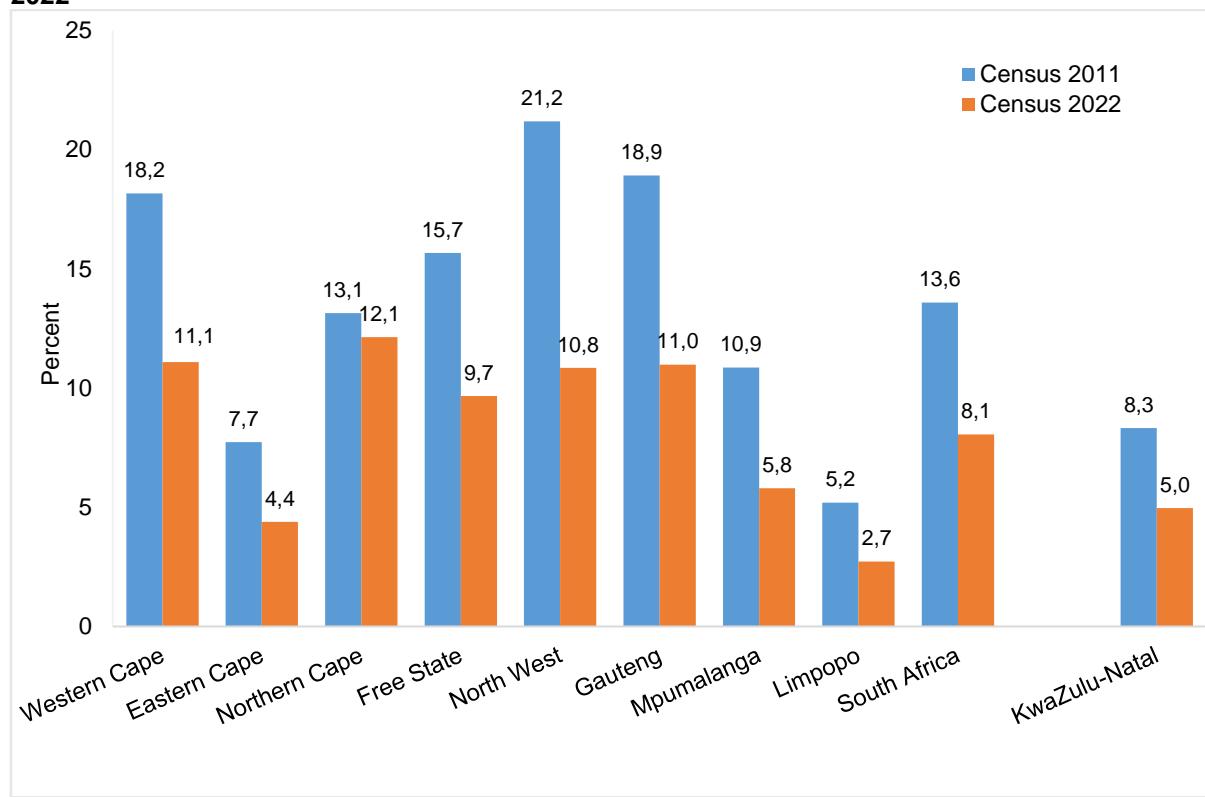

Formal dwelling includes: (1) House or brick/concrete block structure on a separate stand or yard or a farm (2) Flat or apartment in a block of flats (3) Cluster house in a complex (4) Townhouse (semi-detached house in a complex) (5) Semi-detached house (6) Formal dwelling/house/flat/room in the backyard and (7) Room/flatlet on a property or larger dwelling/servant quarters/granny flat/cottage

Informal dwelling includes: (1) Informal dwelling/shack in the backyard and (2) Informal dwelling/shack not in the backyard (e.g. in an informal/squatter settlement or on a farm)

Other includes: (1) Caravan/tent and (2) Other

Table 6.4 above shows the distribution of households in the KwaZulu-Natal by type of main dwelling. The majority (86,8%) of households in KwaZulu-Natal are formal dwellings, followed by traditional (8%) and informal dwellings (5%). Harry Gwala and Umzinyathi districts are the districts with the highest proportion of households residing in traditional dwellings (30,4% and 26,4%), over three times the provincial average. eThekwini (1,7%), Amajuba (4,6%), Umgungundlovu (6,9%), Umkhanyakude (7,1%) and iLembe (9,4%) recorded the lowest proportion of households residing in traditional dwellings, all under 10%. In uMhlathuze (97%) and Newcastle local municipalities (96%), almost all households were formal. As expected, eThekwini had the highest proportion of informal dwellings (8,9%).

**Figure 6.2: Percentage of households residing in an informal dwelling by province, Census 2011-2022**

*Informal dwelling includes: (1) Informal dwelling/shack in the backyard and (2) Informal dwelling/shack not in the backyard (e.g. in an informal/squatter settlement or on a farm)*

Figure 6.2 shows the proportion of KwaZulu-Natal's informal dwellings (5,0%) in 2022 compared to other provinces and to the previous census. In 2011 and 2022, the proportion of informal dwellings in the province was below the national proportion of 13,6% in 2011 and 8,1% in 2022. Compared to other provinces, 5% of Kwazulu-Natal's households resided in informal dwellings, one of the three provinces with the lowest proportion of informal dwellings, after Limpopo (2,7%) and Eastern Cape (4,4%).

Unspecified excluded

Table 6.5 shows the distribution of households in the province residing in RDP housing by district and local municipality. Just over one-quarter (26,7%) of households in KwaZulu-Natal resided in RDP/government-subsidised dwellings in 2022. King Cetshwayo (17,8%), Zululand (18,9%) and Umzinyathi (19,5%) districts recorded the lowest district proportions, all below 20% and lower than the provincial average of 26,7%. Emadlangeni (6,9%) and Umzimkhulu (9,9%) local municipalities recorded the lowest proportion of households residing in RDP housing. The districts that recorded the highest proportions of households residing in RDP/government-subsidised were iLembe (34,1%) and Umgungundlovu (30,8%) districts and eThekweni metropolitan municipality (30,3%). Over half (55%) of the households in the Greater Kokstad local municipality in Harry Gwala district resided in RDP/government dwellings in 2022.

Rented includes: (1) Rented from private individual and (2) Rented from other (incl. municipality and social housing institutions)

The tenure status of a dwelling refers to whether the dwelling that the household is occupying is owned or not. In KwaZulu-Natal, close to three-quarters of households reported that they either owned their dwellings and that they were fully paid off (45,3%) or that they occupied their dwellings rent free (26%). Households that owned and had fully paid off dwellings amongst municipalities ranged from uPhongolo with 62% of its households reporting ownership to Nkandla local municipality with 23,1%. The largest proportions of renting households resided in eThekwin metropolitan municipality (24,9%) and Amajuba district (20%). Greater Kokstad (32,6%) and Endumeni (31,4%) local municipalities had almost one-third of the households in their municipalities renting. This was almost eight times more than the households in Umhlabuyalingana local municipality, where a mere 4,3% were renters. Just less than three-fifths (59,9%) of households in Msinga local municipality occupied their dwellings rent-free, almost double the amount reported in the province (26%).

**Figure 6.3: Percentage of households with access to piped water inside the dwelling/yard by province, Census 2011-2022**

The percentage of households with access to piped water in the dwelling/in the yard for all provinces is shown in Figure 6.3 above. Over three-quarters (77%) of households in KwaZulu-Natal have access to piped water inside the yard, higher than households in the Eastern Cape (67,1%), North West (74,5%) and Limpopo (61,1%), but lower than the national average of 82,4%. There was an increase in the proportion of those with piped water inside the dwelling/yard from 2011 to 2022 in all provinces, with KwaZulu-Natal increasing from 63,6% to 77%.

**Table 6.7: Distribution of households with access to piped water inside the dwelling/yard by district & local municipality, Census 2011-2022**

Piped water on community stand includes: (1) Piped water on community stand distance less than 200m from dwelling (2) Piped water on community stand distance between 200m and 500m (3) Piped water on community stand distance between 500m and 1 000m and (4) Piped water on community stand distance greater than 1 000m

Table 6.7 above shows the province's access to water by district and local municipality for 2011 and 2022. It is optimal that households have piped water inside the dwelling or yard, and we see that in 2022, over three-quarters (77,0 %) of households in KwaZulu-Natal had access to piped water inside their dwelling or in their yard. This was a significant improvement from 2011 when only 63,6% reported the same. The districts of Amajuba (75,8% in 2011 to 89,7% in 2022), eThekwin metropolitan municipality (80,3% in 2011 to 89,4% in 2022), Umgungundlovu (78,5% in 2011 to 86,7% in 2022), and King Cetshwayo (65% in 2011 to 77,5% in 2022) recorded the highest proportions of households with piped water in both 2011 and 2022 and made significant gains in access to piped water from 2011. Newcastle local municipality, in the Amajuba district increased from 85% in 2011 to 95,9% in 2022 and together with uMhlathuze (92,9%) and The Msunduzi (91,3%) local municipalities, recorded household proportions with access to piped water of over 90%.

*Excludes Unspecified & Not applicable  
Interruptions due to unpaid bills or insufficient pre-paid units were excluded*

Table 6.8 above shows households in the province that experienced water interruptions in the 12 months before the Census 2022. Just less than three-fifths of the province (57%) reported that

they experienced water interruptions. Amongst the districts, Ugu recorded the highest percentage of water interruptions at 77.6%. Over four-fifths of households in Emadlangeni local municipality (80,4%) in the Amajuba district and Umdoni (83,2%) and Ray Nkonyeni (84,2%) local municipalities in the Ugu district reported that they had been affected by water interruptions. Households in Dr Nkosazana Dlamini Zulu local municipality (42,5%), together with Greater Kokstad (43,3%) and Ubuhlebezwe (43,6%) local municipalities (all three in Harry Gwala district), were least affected by water interruptions.

**Figure 6.4: Percentage of households with access to a flush toilet by province, Census 2011-2022**

In KwaZulu-Natal, 58,9% of households had access to flush toilets in 2022, an increase from the 45% in 2011. The proportion of households with access to flush toilets in the province was below the national average of 60,1% in 2011 and 70,8% in 2022.

**Table 6.9: Distribution of households by main type of toilet facility, district & local municipality, Census 2022**

**Figure 6.5: Percentage of households with no access to a toilet facility by district, Census 2022**

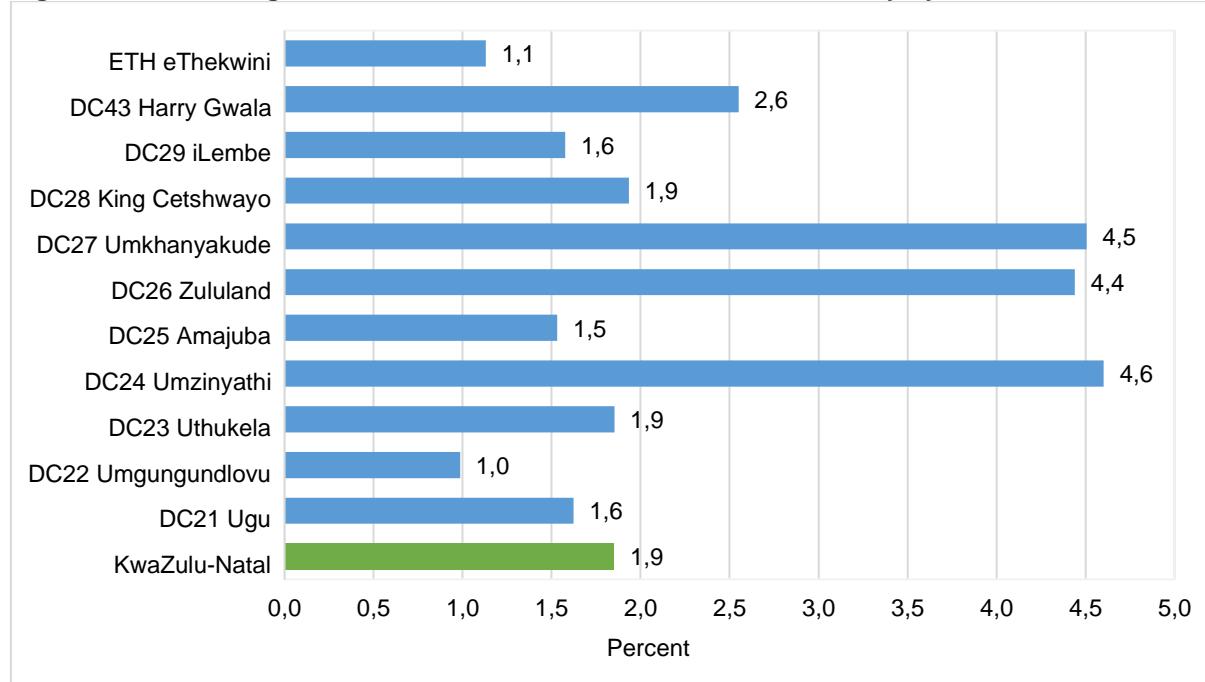

Table 6.9 and Figure 6.5 above show that the majority, 58,9% of households in KwaZulu-Natal had access to flush toilets, whilst 15,2% used pit toilets/latrines with ventilation and 13,3% used pit toilets/latrines without ventilation. Households that used chemical toilets accounted for 7% and 1,9% reported that they had no access to toilet facilities. Amajuba district and eThekwin metropolitan municipality recorded the highest proportion of households with flush toilets, 65,1% and 80,4%, higher than the provincial average of 58,9%. Mpofana (80,2%) and uMngeni local municipalities (83%), both in Umgungundlovu district had over four-fifths of their households using flush toilets. Endumeni local municipality (81,9%) in the Umzinyathi district also reported household proportions above 80% for flush toilets.

Of concern was the high number of local municipalities in the province, a total of 17 where more than one-tenth of households used chemical toilets. The district with the highest percentage of chemical toilet users was Umkhanyakude, with 13,5% of households using them as their main toilet facility. Mthonjaneni local municipality had just less than one-fifth (19,3%) of its households using chemical toilets. Umzinyathi (4,6%), Umkhanyakude (4,5%) and Zululand (4,4%) were the districts with the highest proportion of households with no access to a toilet facility. For 9,9% of households that resided in Nongoma local municipality, located in the Zululand district, there was no access to toilet facilities.

Unspecified excluded

Electricity includes: (1) Electricity from mains and (2) Other source of electricity (e.g. generator)

In KwaZulu-Natal almost all households, 96,7% used electricity for lighting. The districts with higher proportions than the provincial average included Umgungundlovu (97,3%), iLembe (97,7%), King Cetshwayo (97,8%) districts and eThekini metropolitan municipality (98,5%). Of concern are the 2,4% of households using candles for lighting, with higher proportions in the Umhlabuyalingana local municipality located in the Umhlabuyalingana local municipality located in the Umhlabuyalingana district where 8,1% of households used candles. Umhlabuyalingana local municipality located in the Umhlabuyalingana district recorded the second highest proportion of households using candles, 16,6%, after Emadlangeni local municipality in the Amajuba district where one-fifth of the municipality (23,8%) used candles for lighting. The same two municipalities, along with Endumeni local municipality in Umzinyathi were the only three municipalities with more than 1% of households using solar. The province as a whole had low usage of solar as a source of lighting, with only 0,4 % of households reporting this type of energy use for lighting.

**Figure 6.6: Percentage of households using electricity for lighting by province, Census 2022**

When compared to the other eight provinces, KwaZulu-Natal has the highest proportion (96,7%) of households using electricity as a source of lighting, higher than the national average of 94,7% and slightly higher than that of Western Cape (96,5%) and Limpopo with 95,5%.

Electricity includes: (1) Electricity from mains and (2) Other source of electricity (e.g. generator).

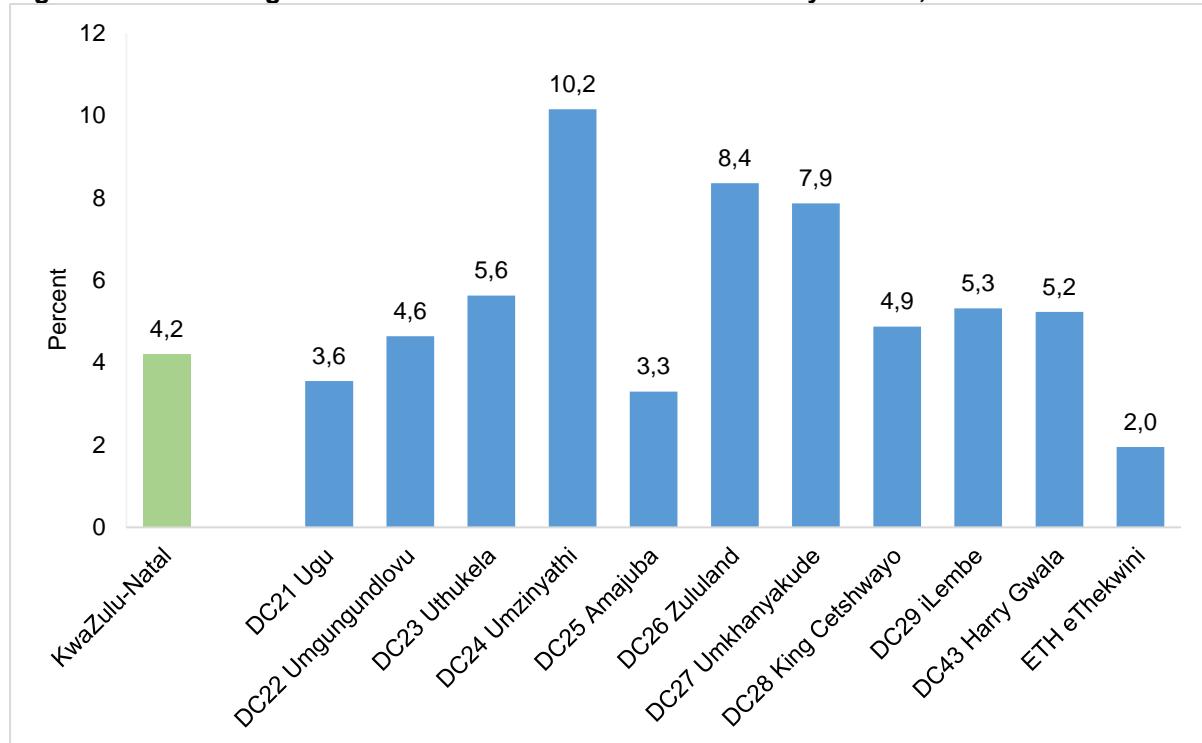

The majority of households (71,8%) in KwaZulu-Natal used electricity as their energy source for cooking as shown in Table 6.9 above. Just over one-fifth (20,6%) used gas for cooking, and 6% used wood. eThekwin metropolitan municipality (75,4%), Amajuba (76,1%) and Umgungundlovu (76,2%) districts recorded a higher percentage of households using electricity for cooking than the provincial average. In Richmond local municipality, 80,3% of households used electricity for cooking, just less than double the proportion recorded in Emalangeni local municipality with 37,1%. Gas usage was the highest in eThekwin metropolitan municipality (23%) and iLembe (22,3%) district. Just over one-quarter of households located in Emadlangeni (27,4%) and KwaDukuza local municipalities (23%) used gas for cooking, the highest proportion in the province. The use of wood for cooking varied from 35,8% in eDumbe to 0,4% in the Msunduzi local municipality. The use of solar, coal and paraffin for cooking was negligible.

**Table 6.12: Distribution of households by type of refuse removal, district & local municipality, Census 2022**

**Figure 6.7: Percentage of households with no refuse removal by district, Census 2022**

The type of refuse removal utilised by households in the province shows large disparities in access to a weekly refuse removal service. In the province, 58,1% of households had their refuse removed weekly. However, looking at districts, this ranges from the 81,5% that have weekly refusal removal services in eThekuni metropolitan municipality to the 21,4% in Umkhanyakude district. Just less than one-third (31,2%) of households in the province reported that they used their own refuse dump and approximately 120,000 households (4,2%) had no refuse removal. More than 10% of households in Umzinyathi district (10,2%) and in six local municipalities - Jozini (10,6%), Ndwedwe (10,8%), Big Five Hlabisa (12,4%), Nongoma (14,8%), Nkandla (15%) and Msinga (21,8%) had no access to refuse removal services.

From Figure 6.7, we note the districts with the highest proportions of households that reported no access to refuse removal. Umzinyathi (10,2%), Zululand (8,4%) and Umkhanyakude (7,9%) were the highest, far above the provincial average of 4,2%

## 6.5 Ownership of household goods

**Figure 6.8: Percentage of households by ownership of selected household goods in KwaZulu-Natal & South Africa, Census 2011-2022**

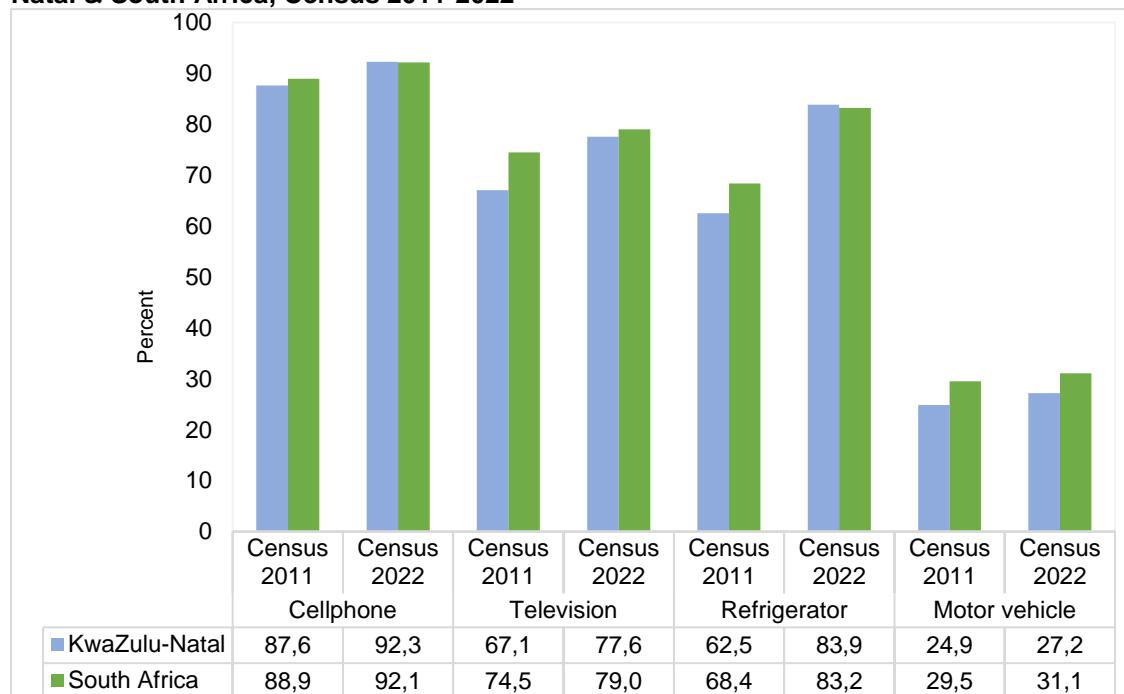

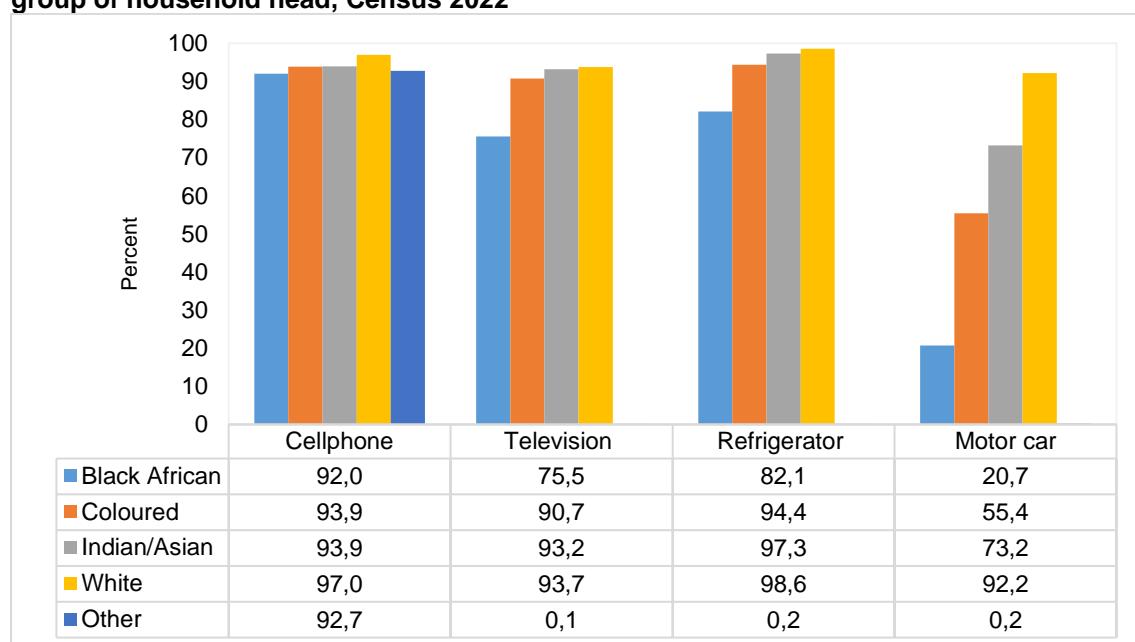

Figure 6.8 makes comparisons regarding the ownership of household goods between KwaZulu-Natal and South Africa across the last two census years. There is an increase in the ownership of all household goods from 2011 to 2022 in both KwaZulu-Natal and South Africa. Less than one-third (27,2%) of the households in the province owned motor vehicles.

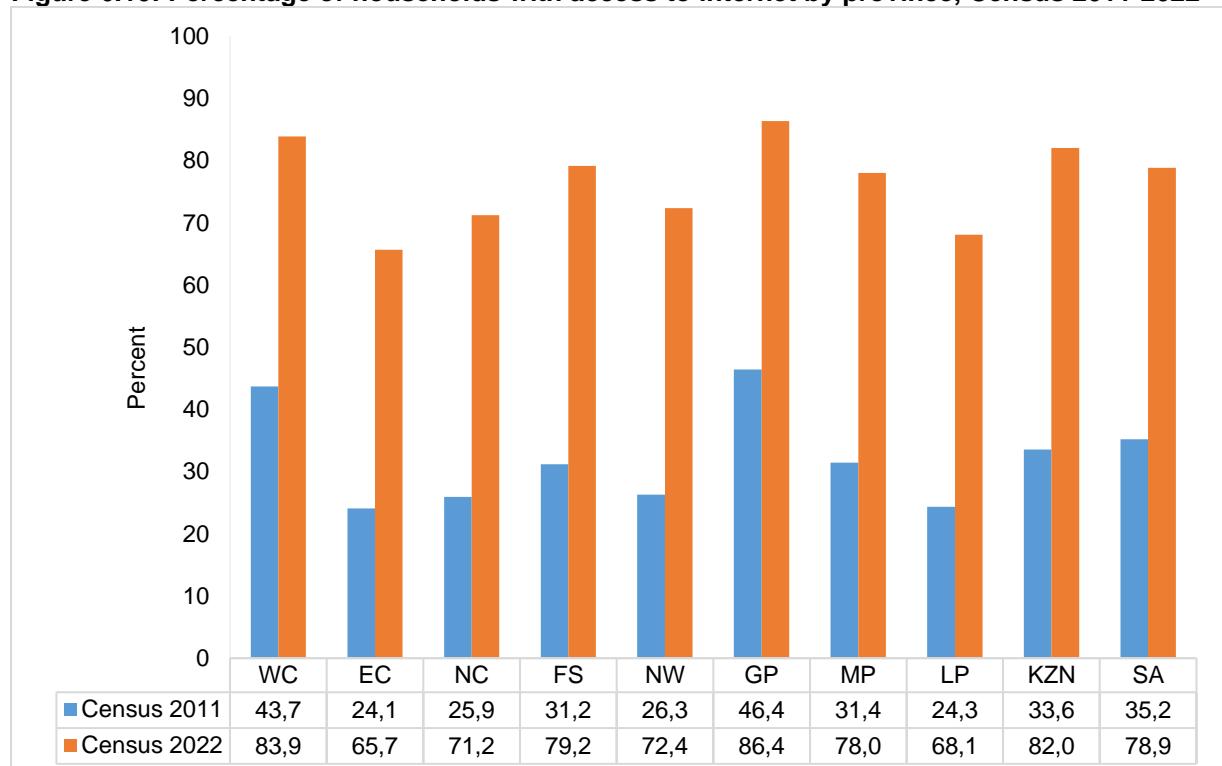

**Figure 6.9: Percentage of households by ownership of selected household goods & population group of household head, Census 2022**

Looking at the differences in ownership of household goods between population groups in the province we see that most households, regardless of the population group of the household head, own a cellphone, television and refrigerator. However, ownership of a motor vehicle varies quite significantly, with almost all white households (92,2%) owning vehicles as compared to 20,7% of black African households. More than two-thirds (73,2%) of Indians/Asians and just over half (55,4%) of coloured households in the province owned cars.

## 6.6 Access to the internet

**Figure 6.10: Percentage of households with access to internet by province, Census 2011-2022**

*Unspecified excluded*

There were large increases in accessing the internet across the country between 2011 and 2022. In 2022, the vast majority (82%) of the province had access to the internet in contrast to 2011 when only 33,6% had access. In 2022, KwaZulu-Natal (along with Western Cape and Gauteng) had a larger proportion of households with access to the internet, higher than the national average of 88,9%.

**Table 6.13: Distribution of households by access to internet, district & local municipality, Census 2022**

Unspecified excluded

Of all the districts in the province, Harry Gwala, with 67,4% was the only district where the proportion of households with internet access was lower than 70%. Ndwendwe (60,3%),

Umzimkhulu (60,9%) and Mpofana (61,3%) local municipalities were the three municipalities with the lowest percentages recorded for access to the internet.

## **6.7 Conclusion**

KwaZulu-Natal's population is made up of 2,9 million households with an average household size of 4,4, the majority (53,1%) of which are headed by females. Most of the province's population live in formal dwellings (86,8%) and 8% in traditional dwellings. Compared to other provinces, 5% of KwaZulu-Natal's households reside in informal dwellings, one of the three provinces with the lowest proportions of informal dwellings. 26,7% of the province resided in RDP/government subsidised housing. Close to three-quarters of households reported that they either owned their dwellings and that they were fully paid off (45,3%) or occupied their dwellings rent-free (26%). The number of households with access to piped water increased from 63,6% in 2011 to 77% in 2022 and water interruptions were experienced by 57% of households. The most common toilet facilities utilised by households were flush toilets (58,9%), pit latrines with VIP (15,2%), pit latrines without ventilation (13,3%) and chemical toilets (7%). Almost all households, 96,7% used electricity for lighting. Electricity was used for cooking by 71,8% of households and gas by 20,6%. Refuse collection differed throughout the province, with 58,1% having access to weekly refuse removal services once a week, but 31,2% using their own refuse dump. There were large increases in access to the internet across the province. In 2022, the vast majority, 82% of the province had access to the internet in contrast to 2011 when only 33,6% had access.

## Appendices

### Appendix 1: Boundary changes

Provincial, District Municipality and Local Municipality boundaries are based on the latest municipal boundary datasets published by the Municipal Demarcation Board in 2018<sup>4</sup>.

The following changes between the 2011 and 2018 datasets have been detected.

#### Provincial boundary changes: 2011 to 2018

Provincial boundaries between 2011 and 2018 have remained stable with no changes in area or names.

**Table A1.1: Geographical land area per province (2011–2018)**

Province name	Code	Area in km <sup>2</sup> 2011	Area in km <sup>2</sup> 2018

#### 1. District municipal changes (2011–2018)

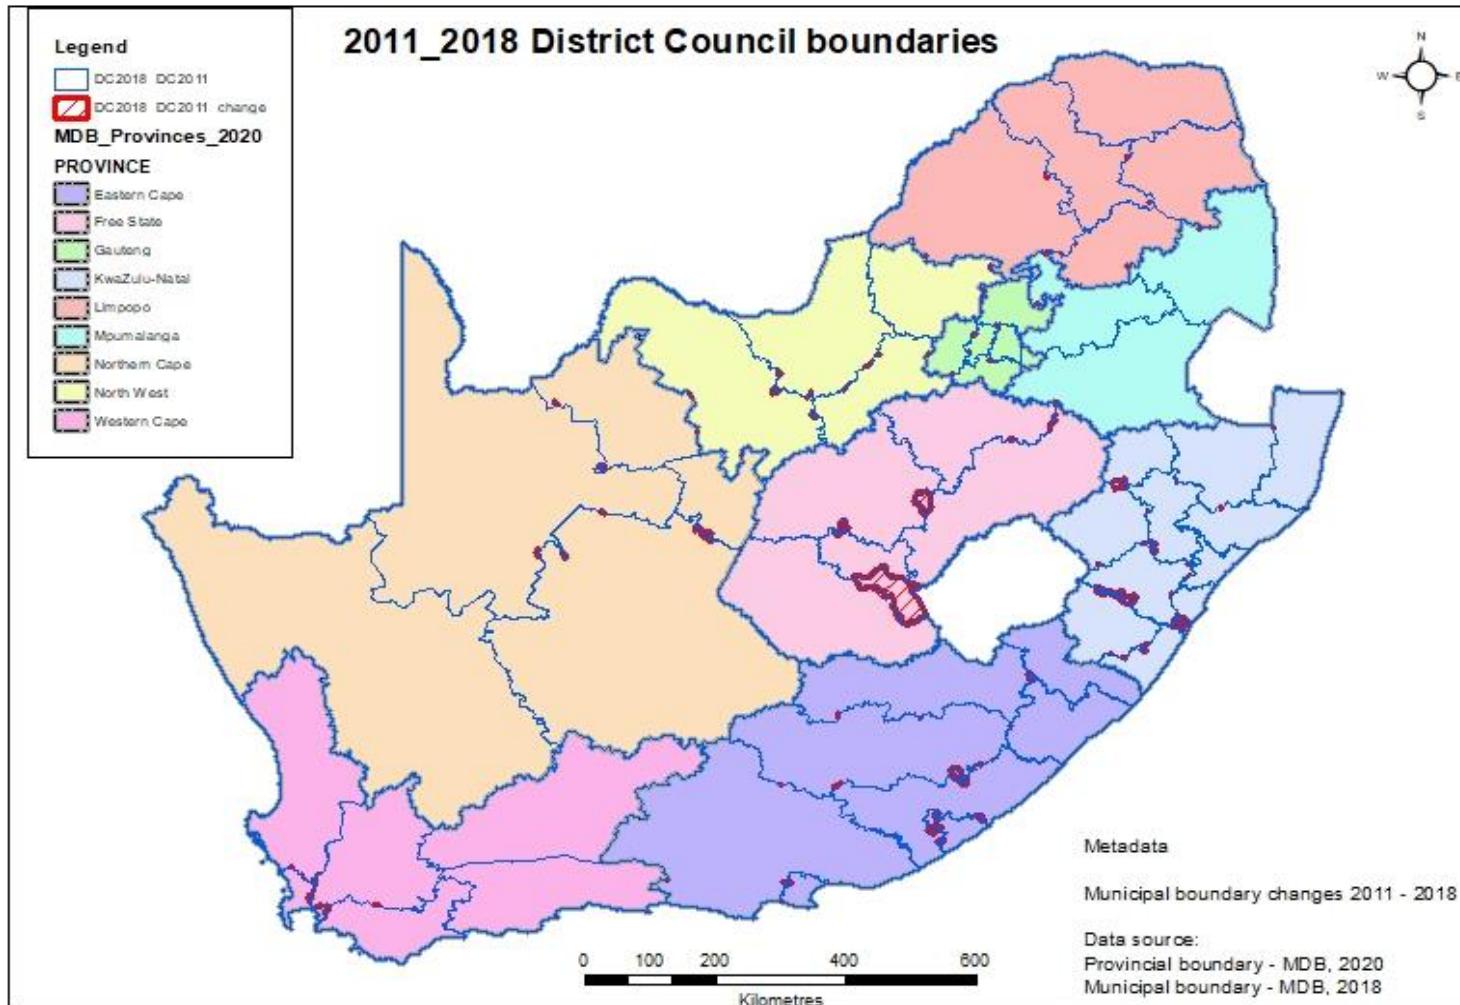

During the period between 2011 and 2018, there were small-scale boundary adjustments for district municipalities and there were name changes throughout the country. There were no district amalgamations in any province. Therefore, the total number of districts (52) in the country have remained unchanged between 2011 and 2018.

<sup>4</sup> Municipal Demarcation Board (2018). Available at: <https://dataportal-mdb.sa.opendata.arcgis.com/search?tags=2018>

**Table A1.2: District municipality boundary and name change per province, 2011–2018**

Province	District boundary	District name
Limpopo	District boundaries of Limpopo remained unchanged from 2011 to 2018.	In 2018, Greater Sekhukhune changed to Sekhukhune.
Mpumalanga	District boundaries of Mpumalanga remained unchanged from 2011 to 2018.	The district names were unchanged from 2011-2018.
KwaZulu-Natal	At the 2018 re-determination there were small-scale boundary adjustments in the following districts: Umgungundlovu, Uthukela, Amajuba, Umzinyathi, eThekwini, Ugu and Sisonke (Harry Gwala).	In 2018, the name Sisonke District Municipality was changed to Harry Gwala District Municipality. In 2018, the name Uthungulu District Municipality was changed to King Cetshwayo District Municipality.
Eastern Cape	At the 2018 re-determination there were small-scale boundary adjustments in the following districts: Amathole, Buffalo City, Chris Hani, Joe Gqabi and O.R. Tambo	In 2018, the name Cacadu District Municipality was changed to Sarah Baartman District Municipality.
Free State	In the 2018 boundary re-determination, Mangaung increased in area from 6 284 km <sup>2</sup> in 2011 to 9 886 km <sup>2</sup> in 2018 with the inclusion of parts of Xhariep and the Lejweleputswa District Municipalities. The Xhariep District Municipality area reduced from 37 674 km <sup>2</sup> in 2011 to 34 250 km <sup>2</sup> in 2018. Lejweleputswa District Municipality area also changed from 31 930 km <sup>2</sup> to 32 287 km <sup>2</sup> through the loss of part of its area to Mangaung and the gain of a part of the Thabo Mofutsanyane District Municipality. A part of the 2011 Thabo Mofutsanyane District Municipality was included into Lejweleputswa District Municipality which resulted in Thabo Mofutsanyane reducing to 32 729 km <sup>2</sup> from 33 269 km <sup>2</sup> in 2011.	There were no district municipality name changes in Free State province in 2018.
Western Cape	There was a minor boundary adjustment between City of Cape Town district and Cape Winelands. The change has no significant impact geographically.	In 2018, there was a district name change of Eden District Municipality to Garden Route District Municipality.
Northern Cape	There was a minor boundary adjustment between Pixley ka Seme and Siyanda (ZF Mgawu); Frances Baard and Pixley ka Seme. These changes were small-scale with no significant geographic impact.	In 2018, there was a district name change from Siyanda to Z F Mgawu.
North West	In 2018, there were minor technical boundary adjustments in Dr. Ruth Segomotsi Mompati, Ngaka Modiri Molema and Dr. Kenneth Kaunda.	At the 2018 re-determination there was no district name change in North West province.
Gauteng	In 2018, there was a minor boundary adjustment in City of Johannesburg and West Rand district.	At the 2018 re-determination there was no district name change in Gauteng province.

Map A1.1: District council boundary changes, 2011–2018

## **Local municipal boundary changes (2011–2018)**

In 2011, there were 234 local municipalities. In 2018, the number of local municipalities reduced to 213. The 2018 re-determination of boundaries resulted in three types of boundary changes, which can be categorised as follows:

### **Class 1 – Technical and minor boundary re-determinations**

This re-determination entailed a small-scale boundary adjustment and alignment with a minor impact on the geographic area with no impact on the capacity of the affected municipalities.

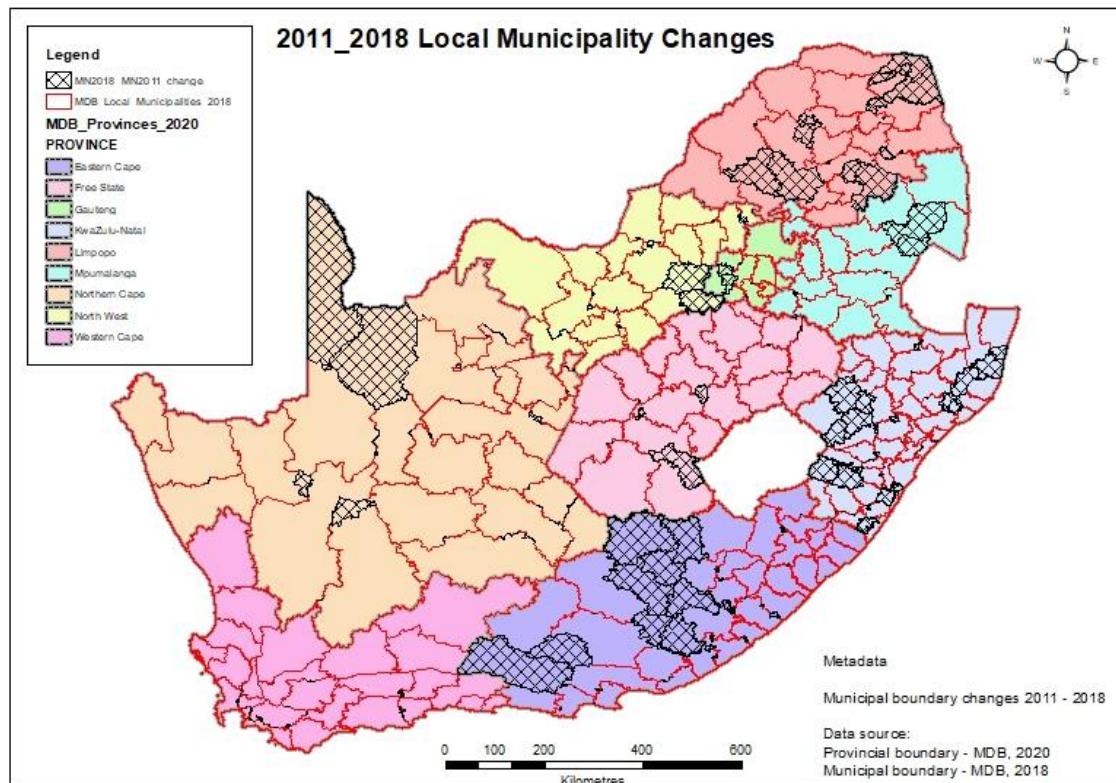

### **Class 2 – Consolidation and annexations**

This was a medium-scale boundary re-determination that may have an impact on a sizable geographic area. This type of determination may impact on ward arrangements but will not materially impact on the capacities of the affected municipalities to deliver services.

### **Class 3 – Amalgamations**

This type of re-determination entailed a major and large-scale municipal boundary re-determination, which will have a significant impact on the geographic areas and the capacities of the affected municipalities. The re-determination includes the merging of adjacent municipalities or the splitting of municipal areas to create other municipal areas.

**Map A1.2: Municipal boundary changes between 2011 and 2018**

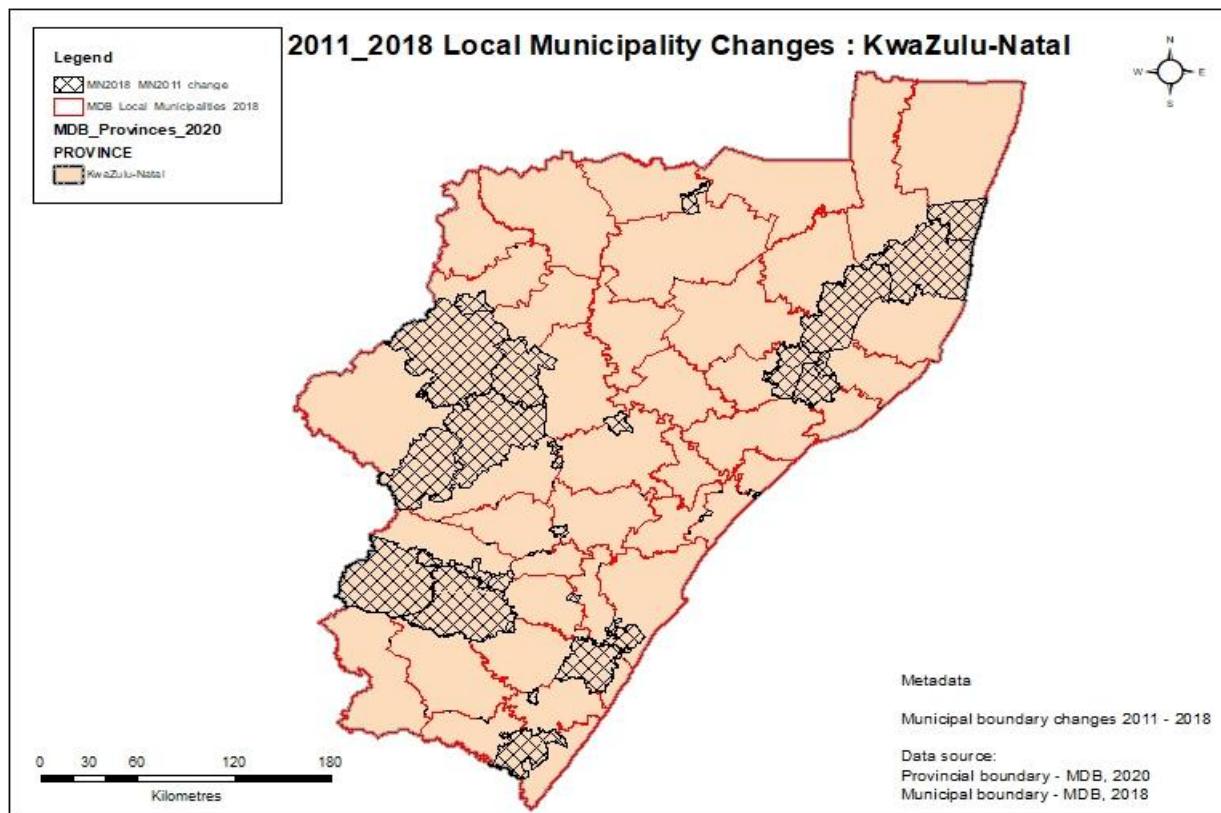

### KwaZulu-Natal

In 2011, KwaZulu-Natal had 1 Metropolitan area and 50 local municipalities. In 2018, the province had 1 Metropolitan area and 43 local municipalities. Changes to the municipalities in 2018 were as follows:

- Ntambanana Local Municipality was dissolved, and the area was split between Mthonjaneni and uMhlathuze local municipalities. Mthonjaneni area size increased from 1 086 km<sup>2</sup> to 1 639 km<sup>2</sup>. uMhlathuze area increased from 793 km<sup>2</sup> to 1 233 km<sup>2</sup>.
- Emnambithi/Ladysmith and Indaka Local Municipalities were merged into one local municipality, namely Alfred Duma.
- Parts of Emnambithi/Ladysmith Local Municipality were allocated to Dannhauser Municipality. Dannhauser's area slightly increased to 1 707 km<sup>2</sup> from 1 516 km<sup>2</sup>.
- Ingwe and Kwa Sani municipalities were merged into one local municipality, namely Dr Nkosazana Dlamini Zuma.
- The Big 5 False Bay and Hlabisa municipalities were merged into one local municipality, namely Big Five Hlabisa.
- Vulamehlo and Umdoni municipalities were merged into one local municipality, namely Umdoni.
- eThekwi Metropolitan area increased from 2 291 km<sup>2</sup> to 2 556 km<sup>2</sup> through the inclusion of parts of Vulamehlo Municipality and Mkhambathini Municipality into its jurisdiction.

- Ezingoleni and Hibiscus Coast municipalities were merged into one local municipality called Ray Nkonyeni.
- Umtshezi and Imbabazane municipalities were merged into one local municipality, namely Inkosi Langalibalele.
- There were minor adjustments in the boundaries of the following municipalities, namely: Impendle, The Msunduzi, Ubuhlebezwe, KwaDukuza, Mandeni, Umvoti and Abaqulusi that resulted in a slight increase in their area.
- There were minor adjustments to the boundaries of the following municipalities, namely: Umhlabuyalingana, uPhongolo, uMngeni, Richmond and Umzumbe that resulted in a slight decrease in their area.

**Appendix 5: Category groupings for field of education, Census 2022**

<b>Field of education</b>	<b>#</b>	<b>Category groupings</b>
04 = Finance & Accounting	1	Business management
05 = Business, Economics & Management sciences	1	Business management
07 = Computer & Information sciences	1	Business management
20 = Public management & services	1	Business management
24 = Office administration	1	Business management
01 = Agriculture, Agricultural operations & related sciences	2	Natural & mathematical sciences
14 = Life sciences	2	Natural & mathematical sciences
15 = Physical sciences	2	Natural & mathematical sciences
16 = Mathematics & Statistics	2	Natural & mathematical sciences
02 = Architecture & the Built environment	3	Engineering & other applied sciences
09 = Engineering	3	Engineering & other applied sciences
25 = Electrical infrastructure	3	Engineering & other applied sciences
03 = Arts (visual & performing arts)	4	Humanities, social sciences & applied humanities
06 = Communication, Journalism & related studies	4	Humanities, social sciences & applied humanities
08 = Education	4	Humanities, social sciences & applied humanities
11 = Family ecology & Consumer sciences	4	Humanities, social sciences & applied humanities
12 = Languages, Linguistics or Literature	4	Humanities, social sciences & applied humanities
18 = Philosophy, Religion & Theology	4	Humanities, social sciences & applied humanities
19 = Psychology	4	Humanities, social sciences & applied humanities
21 = Social sciences	4	Humanities, social sciences & applied humanities
22 = Hospitality, including tourism	4	Humanities, social sciences & applied humanities
10 = Health professions & related clinical sciences	5	Health sciences
13 = Law	6	Law
17 = Military sciences	7	Other
23 = Security & Intelligence services	7	Other
26 = Other	7	Other
